Keeping (1) and hiding *,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of pm_resolve_address_write.2.
Q.E.D.

C.118 Proofs for List_Split (linear_memory.pvs)

C.118.1 List_Split.split_TCC1

Terse proof for split_TCC1.

split_TCC1:

{1}	\forall (size: nat, a : Address, bl: list[Byte], e2size: posnat): $\neg a + \text{length}(bl) \leq \text{floor}(e2size)(a) + e2size \wedge$ $\neg \text{null?}(bl) \wedge e2size = \text{expt}(2, \text{size})$ \supset $(\forall (\delta: \{r: \text{mod}(e2size) \mid \exists q: \text{offset}(a) = r + e2size \times q\}):$ $\delta = \text{rem}(e2size)(\text{offset}(a)) \supset$ $e2size - \delta \geq 0 \wedge e2size - \delta \leq \text{length}[\text{Byte}](bl))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of split_TCC1.
Q.E.D.

C.118.2 List_Split.split_TCC2

Terse proof for split_TCC2.

split_TCC2:

$\begin{aligned} \{1\} \quad & \forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}], \text{e2size}: \text{posnat}): \\ & \neg a + \text{length}(\text{bl}) \leq \text{floor}(\text{e2size})(a) + \text{e2size} \wedge \\ & \neg \text{null}?(\text{bl}) \wedge \text{e2size} = \text{expt}(2, \text{size}) \\ & \supset \\ & (\forall (\delta: \{r: \text{mod}(\text{e2size}) \mid \exists q: \text{offset}(a) = r + \text{e2size} \times q\}): \\ & \quad \delta = \text{rem}(\text{e2size})(\text{offset}(a)) \supset \\ & \quad \text{length}[\text{Byte}](\text{tail}[\text{Byte}](\text{bl}, \text{e2size} - \delta)) < \text{length}[\text{Byte}](\text{bl})) \end{aligned}$
--

Repeatedly Skolemizing and flattening,

Replacing using formula -8,

Rewriting using length_tail, matching in *,

we get 2 subgoals:

split_TCC2.1:

$\begin{aligned} \{-1\} \quad & \text{integer_pred}(q') \\ \{-2\} \quad & \text{rem}(\text{e2size}')(\text{offset}(a')) < \text{e2size}' \\ \{-3\} \quad & \text{offset}(a') = \text{rem}(\text{e2size}')(\text{offset}(a')) + \text{e2size}' \times q' \\ \{-4\} \quad & \text{size}' \geq 0 \\ \{-5\} \quad & \text{every}(\lambda (x: \text{number}): \\ & \quad \text{number_field_pred}(x) \wedge \\ & \quad \text{real_pred}(x) \wedge \\ & \quad \text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte}) \\ & \quad (\text{bl}') \\ \{-6\} \quad & \text{e2size}' > 0 \\ \{-7\} \quad & \text{e2size}' = \text{expt}(2, \text{size}') \\ \{-8\} \quad & \text{delta}' = \text{rem}(\text{e2size}')(\text{offset}(a')) \end{aligned}$
$\begin{aligned} \{1\} \quad & a' + \text{length}(\text{bl}') \leq \text{floor}(\text{e2size}')(\text{offset}(a')) + \text{e2size}' \\ \{2\} \quad & \text{null}?(\text{bl}') \\ \{3\} \quad & \text{rem}(\text{e2size}')(\text{offset}(a')) + \text{length}(\text{bl}') - \text{e2size}' < \text{length}[\text{Byte}](\text{bl}') \end{aligned}$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of split_TCC2.1.

split_TCC2.2:

$\begin{aligned} \{-1\} \quad & \text{integer_pred}(q') \\ \{-2\} \quad & \text{rem}(\text{e2size}')(\text{offset}(a')) < \text{e2size}' \\ \{-3\} \quad & \text{offset}(a') = \text{rem}(\text{e2size}')(\text{offset}(a')) + \text{e2size}' \times q' \\ \{-4\} \quad & \text{size}' \geq 0 \\ \{-5\} \quad & \text{every}(\lambda (x: \text{number}): \\ & \quad \text{number_field_pred}(x) \wedge \\ & \quad \text{real_pred}(x) \wedge \\ & \quad \text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte}) \\ & \quad (\text{bl}') \\ \{-6\} \quad & \text{e2size}' > 0 \\ \{-7\} \quad & \text{e2size}' = \text{expt}(2, \text{size}') \\ \{-8\} \quad & \text{delta}' = \text{rem}(\text{e2size}')(\text{offset}(a')) \end{aligned}$
$\begin{aligned} \{1\} \quad & \text{e2size}' - \text{rem}(\text{e2size}')(\text{offset}(a')) \leq \text{length}(\text{bl}') \\ \{2\} \quad & a' + \text{length}(\text{bl}') \leq \text{floor}(\text{e2size}')(\text{offset}(a')) + \text{e2size}' \\ \{3\} \quad & \text{null}?(\text{bl}') \\ \{4\} \quad & \text{length}[\text{Byte}](\text{tail}[\text{Byte}](\text{bl}', \text{e2size}' - \text{rem}(\text{e2size}')(\text{offset}(a')))) < \\ & \quad \text{length}[\text{Byte}](\text{bl}') \end{aligned}$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `split_TCC2.2`.
 Q.E.D.

C.118.3 List_Split.split_pair_cross_size

Terse proof for `split_pair_cross_size`.

`split_pair_cross_size`:

```
{1}  ∀ (size: nat, a1: Address, bl1: list[Byte], n: nat):
      LET e2size = expt(2, size) IN
      n = length(bl1) ⊃
      every(λ (a2: Address, bl2: list[Byte]):
            rem(e2size)(offset(a2)) + length(bl2) ≤ e2size)
      (split(size, a1, bl1))
```

Inducting on n on formula 1 using induction scheme `NAT_induction`,
 we get 2 subgoals:

`split_pair_cross_size.1`:

```
{-1}  ∀ (size: nat, a1: Address, bl1: list[Byte]):
      n' = length(bl1) ⊃
      every(λ (a2: Address, bl2: list[Byte]):
            rem(expt(2, size))(offset(a2)) + length(bl2) ≤ expt(2, size))
      (split(size, a1, bl1))
```

```
{1}  ∀ (size: nat, a1: Address, bl1: list[Byte]):
      LET e2size = expt(2, size) IN
      n' = length(bl1) ⊃
      every(λ (a2: Address, bl2: list[Byte]):
            rem(e2size)(offset(a2)) + length(bl2) ≤ e2size)
      (split(size, a1, bl1))
```

Repeatedly Skolemizing and flattening,
 Instantiating the top quantifier in -3 with the terms: (size!1 a1!1 bl1!1),
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `split_pair_cross_size.1`.

`split_pair_cross_size.2`:

```
{1}  ∀ j:
      (∀ k:
         k < j ⊃
         (∀ (size: nat, a1: Address, bl1: list[Byte]):
            k = length(bl1) ⊃
            every(λ (a2: Address, bl2: list[Byte]):
                  rem(expt(2, size))(offset(a2)) + length(bl2) ≤
                  expt(2, size))
            (split(size, a1, bl1))))
      ⊃
      (∀ (size: nat, a1: Address, bl1: list[Byte]):
         j = length(bl1) ⊃
         every(λ (a2: Address, bl2: list[Byte]):
               rem(expt(2, size))(offset(a2)) + length(bl2) ≤ expt(2, size))
         (split(size, a1, bl1)))
```

C Proof scripts

Repeatedly Skolemizing and flattening,
 Expanding the definition of split,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 we get 3 subgoals:

split_pair_cross_size.2.1:

{-1}	$size' \geq 0$
{-2}	$every(\lambda (x: number):$ $number_field_pred(x) \wedge$ $real_pred(x) \wedge$ $rational_pred(x) \wedge integer_pred(x) \wedge x \geq 0 \wedge x < max_byte)$ $(bl1')$
{-3}	$j' \geq 0$
{-4}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a_1: Address, bl1: list[Byte]):$ $k = length(bl1) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]):$ $rem(expt(2, size))(offset(a_2)) + length(bl2) \leq expt(2, size))$ $(split(size, a_1, bl1)))$
{-5}	$j' = length(bl1')$
{-6}	$null?(bl1')$
{1}	$every(\lambda (a_2: Address, bl2: list[Byte]):$ $rem(expt(2, size'))(offset(a_2)) + length(bl2) \leq expt(2, size'))$ $(null)$

Expanding the definition of every,
 which is trivially true.

This completes the proof of **split_pair_cross_size.2.1**.

split_pair_cross_size.2.2:

{-1}	$size' \geq 0$
{-2}	$every(\lambda (x: number):$ $number_field_pred(x) \wedge$ $real_pred(x) \wedge$ $rational_pred(x) \wedge integer_pred(x) \wedge x \geq 0 \wedge x < max_byte)$ $(bl1')$
{-3}	$j' \geq 0$
{-4}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a_1: Address, bl1: list[Byte]):$ $k = length(bl1) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]):$ $rem(expt(2, size))(offset(a_2)) + length(bl2) \leq expt(2, size))$ $(split(size, a_1, bl1)))$
{-5}	$j' = length(bl1')$
{-6}	$a'_1 + length(bl1') \leq floor(expt(2, size'))(a'_1) + expt(2, size')$
{1}	$null?(bl1')$
{2}	$every(\lambda (a_2: Address, bl2: list[Byte]):$ $rem(expt(2, size'))(offset(a_2)) + length(bl2) \leq expt(2, size'))$ $(cons((a'_1, bl1'), null))$

Expanding the definition of every,
 Expanding the definition of every,
 Keeping (-6 2) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of split_pair_cross_size.2.2.

split_pair_cross_size.2.3:

<pre> {-1} size' ≥ 0 {-2} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl1') {-3} j' ≥ 0 {-4} ∀ k: k < j' ⊃ (∀ (size: nat, a1: Address, bl1: list[Byte]): k = length(bl1) ⊃ every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size))(offset(a2)) + length(bl2) ≤ expt(2, size)) (split(size, a1, bl1)))) {-5} j' = length(bl1')</pre>	<hr style="border: 0.5px solid black;"/> <pre> {1} null?(bl1') {2} a1' + length(bl1') ≤ floor(expt(2, size'))(a1') + expt(2, size') {3} every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size'))(offset(a2)) + length(bl2) ≤ expt(2, size')) (cons((a1', head(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1')))), split(size', floor(expt(2, size'))(a1') + expt(2, size'), tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1'))))))</pre>
--	--

Expanding the definition of every,
Applying propositional simplification,
we get 2 subgoals:

split_pair_cross_size.2.3.1:

<pre> {-1} size' ≥ 0 {-2} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl1') {-3} j' ≥ 0 {-4} ∀ k: k < j' ⊃ (∀ (size: nat, a1: Address, bl1: list[Byte]): k = length(bl1) ⊃ every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size))(offset(a2)) + length(bl2) ≤ expt(2, size)) (split(size, a1, bl1)))) {-5} j' = length(bl1')</pre>	<hr style="border: 0.5px solid black;"/> <pre> {1} rem(expt(2, size'))(offset(a1')) + length(head(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1')))) ≤ expt(2, size') {2} null?(bl1') {3} a1' + length(bl1') ≤ floor(expt(2, size'))(a1') + expt(2, size')</pre>
--	---

C Proof scripts

Rewriting using `length_head`, matching in `*`,
we get 2 subgoals:

`split_pair_cross_size.2.3.1.1:`

{-1}	$size' \geq 0$
{-2}	every($\lambda (x: \text{number})$): $\text{number_field_pred}(x) \wedge$ $\text{real_pred}(x) \wedge$ $\text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte}$
	(bl1')

Instantiating the top quantifier in -1 with the terms: $(\text{size}!1 \text{ floor}(\text{expt}(2, \text{size}!1))(a1!1) + \text{expt}(2,$

C Proof scripts

size!1) tail(bl1!1, expt(2, size!1) - rem(expt(2, size!1))(offset(a1!1)))),

which is trivially true.

This completes the proof of `split_pair_cross_size.2.3.2.1`.

`split_pair_cross_size.2.3.2.2`:

<pre> {-1} size' ≥ 0 {-2} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl1') {-3} j' ≥ 0 {-4} j' = length(bl1')</pre>	<pre> {1} length(tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1')))) < j' {2} every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size'))(offset(a2)) + length(bl2) ≤ expt(2, size')) (split(size', floor(expt(2, size'))(a1) + expt(2, size'), tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1'))))) {3} null?(bl1') {4} a1 + length(bl1') ≤ floor(expt(2, size'))(a1) + expt(2, size')</pre>
--	---

Rewriting using `length_tail`, matching in `*`,

we get 2 subgoals:

`split_pair_cross_size.2.3.2.2.1`:

<pre> {-1} size' ≥ 0 {-2} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl1') {-3} j' ≥ 0 {-4} j' = length(bl1')</pre>	<pre> {1} rem(expt(2, size'))(offset(a1)) + length(bl1') - expt(2, size') < j' {2} every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size'))(offset(a2)) + length(bl2) ≤ expt(2, size')) (split(size', floor(expt(2, size'))(a1) + expt(2, size'), tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1'))))) {3} null?(bl1') {4} a1 + length(bl1') ≤ floor(expt(2, size'))(a1) + expt(2, size')</pre>
--	--

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `split_pair_cross_size.2.3.2.2.1`.

split_pair_cross_size.2.3.2.2.2:

<pre> {-1} size' ≥ 0 {-2} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl1') {-3} j' ≥ 0 {-4} j' = length(bl1')</pre>	<hr/> <pre> {1} expt(2, size') - rem(expt(2, size'))(offset(a1')) ≤ length(bl1') {2} length(tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1')))) < j' {3} every(λ (a2: Address, bl2: list[Byte]): rem(expt(2, size'))(offset(a2)) + length(bl2) ≤ expt(2, size') (split(size', floor(expt(2, size'))(a1') + expt(2, size'), tail(bl1', expt(2, size') - rem(expt(2, size'))(offset(a1'))))) {4} null?(bl1') {5} a1' + length(bl1') ≤ floor(expt(2, size'))(a1') + expt(2, size')</pre>
--	---

Hiding formulas: -2, 3,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of split_pair_cross_size.2.3.2.2.2.

Q.E.D.

C.118.4 List_Split.split_pair_concat

Terse proof for split_pair_concat.

split_pair_concat:

<pre> {1} ∀ (size: nat, a: Address, bl: list[Byte], n: nat): LET e2size = expt(2, size) IN n = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): LET head = e'2 IN append(head, tail) (split(size, a, bl)) = bl</pre>	<hr/>
---	-------

Inducting on n on formula 1 using induction scheme NAT_induction,

we get 2 subgoals:

`split_pair_concat.1:`

<pre>{-1} ∀ (size: nat, a: Address, bl: list[Byte]): n' = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size, a, bl)) = bl</pre>	<hr style="border: 0.5px solid black;"/> <pre>{1} ∀ (size: nat, a: Address, bl: list[Byte]): LET e2size = expt(2, size) IN n' = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): LET head = e'2 IN append(head, tail)) (split(size, a, bl)) = bl</pre>
---	--

Repeatedly Skolemizing and flattening,

Simplifying, rewriting, and recording with decision procedures,

Hiding formulas: -2,

Instantiating quantified variables,

This completes the proof of `split_pair_concat.1`.

`split_pair_concat.2:`

<pre>{1} ∀ j: (∀ k: k < j ⊃ (∀ (size: nat, a: Address, bl: list[Byte]): k = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size, a, bl)) = bl)) ⊃ (∀ (size: nat, a: Address, bl: list[Byte]): j = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size, a, bl)) = bl)</pre>	<hr style="border: 0.5px solid black;"/>
--	--

Repeatedly Skolemizing and flattening,

Expanding the definition of split,

Expanding the definition of reduce,

Hiding formulas: -2,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

split_pair_concat.2.1:

<pre> {-1} size' ≥ 0 {-2} j' ≥ 0 {-3} ∀ k: k < j' ⊃ (∀ (size: nat, a: Address, bl: list[Byte]): k = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size, a, bl)) = bl) {-4} j' = length(bl') {-5} a' + length(bl') ≤ floor(expt(2, size'))(a') + expt(2, size') </pre>	<pre> {1} null?(bl') {2} append(bl', reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (null)) = bl' </pre>
--	---

Expanding the definition of reduce,

Rewriting using append_null, matching in *,

This completes the proof of split_pair_concat.2.1.

split_pair_concat.2.2:

<pre> {-1} size' ≥ 0 {-2} j' ≥ 0 {-3} ∀ k: k < j' ⊃ (∀ (size: nat, a: Address, bl: list[Byte]): k = length(bl) ⊃ reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size, a, bl)) = bl) {-4} j' = length(bl') </pre>	<pre> {1} null?(bl') {2} a' + length(bl') ≤ floor(expt(2, size'))(a') + expt(2, size') {3} append(head(bl', expt(2, size') - rem(expt(2, size'))(offset(a'))), reduce(null, λ (e: [Address, list[Byte]], tail: list[Byte]): append(e'2, tail)) (split(size', floor(expt(2, size'))(a') + expt(2, size'), tail(bl', expt(2, size') - rem(expt(2, size'))(offset(a')))))) = bl' </pre>
---	--

Instantiating the top quantifier in -3 with the terms: (length(tail(bl!1, expt(2, size!1) - rem(expt(2, size!1))(offset(a!1))))),

Splitting conjunctions,

we get 2 subgoals:

`split_pair_concat.2.2.1:`

$$\begin{array}{l}
 \{-1\} \quad \forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]): \\
 \quad \text{length}(\text{tail}(\text{bl}', \text{expt}(2, \text{size}') - \text{rem}(\text{expt}(2, \text{size}'))(\text{offset}(a')))) = \\
 \quad \quad \text{length}(\text{bl}) \\
 \quad \quad \supset \\
 \quad \quad \text{reduce}(\text{null}, \lambda (e: [\text{Address}, \text{list}[\text{Byte}]], \text{tail}: \text{list}[\text{Byte}]): \text{append}(e'2, \text{tail})) \\
 \quad \quad \quad (\text{split}(\text{size}, a, \text{bl})) \\
 \{-2\} \quad \text{size}' = \text{bl} \\
 \{-3\} \quad \text{size}' \geq 0 \\
 \{-4\} \quad j' = \text{length}(\text{bl}') \\
 \hline
 \{1\} \quad \text{null?}(\text{bl}') \\
 \{2\} \quad a' + \text{length}(\text{bl}') \leq \text{floor}(\text{expt}(2, \text{size}'))(a') + \text{expt}(2, \text{size}') \\
 \{3\} \quad \text{append}(\text{head}(\text{bl}', \text{expt}(2, \text{size}') - \text{rem}(\text{expt}(2, \text{size}'))(\text{offset}(a'))), \\
 \quad \quad \text{reduce}(\text{null}, \\
 \quad \quad \quad \lambda (e: [\text{Address}, \text{list}[\text{Byte}]], \text{tail}: \text{list}[\text{Byte}]): \text{append}(e'2, \text{tail})) \\
 \quad \quad \quad (\text{split}(\text{size}', \text{floor}(\text{expt}(2, \text{size}'))(a') + \text{expt}(2, \text{size}'), \\
 \quad \quad \quad \quad \text{tail}(\text{bl}', \\
 \quad \quad \quad \quad \quad \text{expt}(2, \text{size}') - \text{rem}(\text{expt}(2, \text{size}'))(\text{offset}(a'))))) \\
 \quad \quad = \text{bl}'
 \end{array}$$

Instantiating the top quantifier in -1 with the terms: $(\text{size!1 floor}(\text{expt}(2, \text{size!1}))(a!1) + \text{expt}(2, \text{size!1}) \text{tail}(\text{bl!1}, \text{expt}(2, \text{size!1}) - \text{rem}(\text{expt}(2, \text{size!1}))(\text{offset}(a!1))))$,

Replacing using formula -1,

Rewriting using `head_tail`, matching in *,

Expanding the definition of `floor`,

Expanding the definition of `floor`,

Expanding the definition of `+`,

Expanding the definition of `<=`,

which is trivially true.

This completes the proof of `split_pair_concat.2.2.1`.

`split_pair_concat.2.2.2:`

$$\begin{array}{l}

{3}	$a' + \text{length}(\text{head}(bl', \text{expt}(2, size') - \text{rem}(\text{expt}(2, size'))(\text{offset}(a'))))$ $\quad \leq a' + j'$

Rewriting using `length_head`, matching in `*`,

we get 2 subgoals:

`split_range.2.5.1:`

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a: Address, bl: list[Byte]):$ $k = length(bl) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]):$ $a \leq a_2 \wedge a_2 + length(bl2) \leq a + k$ $(split(size, a, bl)))$
{-4}	$j' = length(bl')$
{1}	$null?(bl')$
{2}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{3}	$a' + expt(2, size') - rem(expt(2, size'))(offset(a')) \leq a' + j'$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_range.2.5.1`.

`split_range.2.5.2:`

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a: Address, bl: list[Byte]):$ $k = length(bl) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]):$ $a \leq a_2 \wedge a_2 + length(bl2) \leq a + k$ $(split(size, a, bl)))$
{-4}	$j' = length(bl')$
{1}	$expt(2, size') - rem(expt(2, size'))(offset(a')) \leq length[Byte](bl')$
{2}	$null?(bl')$
{3}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{4}	$a' + length(head(bl', expt(2, size') - rem(expt(2, size'))(offset(a'))))$ $\leq a' + j'$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_range.2.5.2`.

`split_range.2.6:`

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a: Address, bl: list[Byte]):$ $k = length(bl) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]):$ $a \leq a_2 \wedge a_2 + length(bl2) \leq a + k$ $(split(size, a, bl)))$
{-4}	$j' = length(bl')$
{1}	$null?(bl')$
{2}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{3}	$a' \leq a'$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_range.2.6`.

Q.E.D.

C.118.6 List_Split.split_no_null

Terse proof for `split_no_null`.

`split_no_null`:

$\{1\} \quad \forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}], n: \text{nat}):$ $\text{LET } e2\text{size} = \text{expt}(2, \text{size}) \text{ IN}$ $n = \text{length}(\text{bl}) \wedge \text{cons}^?(\text{bl}) \supset$ $\text{every}(\lambda (a_2: \text{Address}, \text{bl}_2: \text{list}[\text{Byte}]): \text{cons}^?(\text{bl}_2))(\text{split}(\text{size}, a, \text{bl}))$

Inducting on n on formula 1 using induction scheme `NAT_induction`,

we get 2 subgoals:

`split_no_null.1`:

$\{-1\} \quad \forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $n' = \text{length}(\text{bl}) \wedge \text{cons}^?(\text{bl}) \supset$ $\text{every}(\lambda (a_2: \text{Address}, \text{bl}_2: \text{list}[\text{Byte}]): \text{cons}^?(\text{bl}_2))(\text{split}(\text{size}, a, \text{bl}))$
$\{1\} \quad \forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $\text{LET } e2\text{size} = \text{expt}(2, \text{size}) \text{ IN}$ $n' = \text{length}(\text{bl}) \wedge \text{cons}^?(\text{bl}) \supset$ $\text{every}(\lambda (a_2: \text{Address}, \text{bl}_2: \text{list}[\text{Byte}]): \text{cons}^?(\text{bl}_2))(\text{split}(\text{size}, a, \text{bl}))$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_no_null.1`.

`split_no_null.2`:

$\{1\} \quad \forall j:$ $(\forall k:$ $k < j \supset$ $(\forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $k = \text{length}(\text{bl}) \wedge \text{cons}^?(\text{bl}) \supset$ $\text{every}(\lambda (a_2: \text{Address}, \text{bl}_2: \text{list}[\text{Byte}]): \text{cons}^?(\text{bl}_2))$ $(\text{split}(\text{size}, a, \text{bl}))))$ \supset $(\forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $j = \text{length}(\text{bl}) \wedge \text{cons}^?(\text{bl}) \supset$ $\text{every}(\lambda (a_2: \text{Address}, \text{bl}_2: \text{list}[\text{Byte}]): \text{cons}^?(\text{bl}_2))(\text{split}(\text{size}, a, \text{bl})))$
--

Repeatedly Skolemizing and flattening,

Hiding formulas: -2,

Expanding the definition of `every`,

Expanding the definition of `split`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

split_no_null.2.1:

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a: Address, bl: list[Byte]):$ $k = length(bl) \wedge cons?(bl) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))(split(size, a, bl)))$
{-4}	$j' = length(bl')$
{-5}	$cons?(bl')$
{-6}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{1}	$every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))(null)$

Expanding the definition of every,

which is trivially true.

This completes the proof of split_no_null.2.1.

split_no_null.2.2:

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: nat, a: Address, bl: list[Byte]):$ $k = length(bl) \wedge cons?(bl) \supset$ $every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))(split(size, a, bl)))$
{-4}	$j' = length(bl')$
{-5}	$cons?(bl')$
{1}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{2}	$every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))$ $(split(size', floor(expt(2, size'))(a') + expt(2, size'),$ $tail(bl', expt(2, size') - rem(expt(2, size'))(offset(a'))))$

Instantiating the top quantifier in -3 with the terms: $(length(tail(bl!1, expt(2, size!1) - rem(expt(2, size!1))(offset(a!1))))),$

Splitting conjunctions,

we get 2 subgoals:

split_no_null.2.2.1:

{-1}	$\forall (size: nat, a: Address, bl: list[Byte]):$ $length(tail(bl', expt(2, size') - rem(expt(2, size'))(offset(a')))) =$ $length(bl)$ $\wedge cons?(bl)$ $\supset every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))(split(size, a, bl))$
{-2}	$size' \geq 0$
{-3}	$j' \geq 0$
{-4}	$j' = length(bl')$
{-5}	$cons?(bl')$
{1}	$a' + length(bl') \leq floor(expt(2, size'))(a') + expt(2, size')$
{2}	$every(\lambda (a_2: Address, bl2: list[Byte]): cons?(bl2))$ $(split(size', floor(expt(2, size'))(a') + expt(2, size'),$ $tail(bl', expt(2, size') - rem(expt(2, size'))(offset(a'))))$

Instantiating the top quantifier in -1 with the terms: $(size!1 floor(expt(2, size!1))(a!1) + expt(2, size!1) tail(bl!1, expt(2, size!1) - rem(expt(2, size!1))(offset(a!1))))),$

C Proof scripts

Simplifying, rewriting, and recording with decision procedures,
Using lemma `length_tail`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `split_no_null.2.2.1`.

`split_no_null.2.2.2`:

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$j' = \text{length}(bl')$
{-4}	$\text{cons?}(bl')$
{1}	$\text{length}(\text{tail}(bl', \text{expt}(2, size') - \text{rem}(\text{expt}(2, size'))(\text{offset}(a')))) < j'$
{2}	$a' + \text{length}(bl') \leq \text{floor}(\text{expt}(2, size'))(a') + \text{expt}(2, size')$
{3}	$\text{every}(\lambda (a_2: \text{Address}, bl2: \text{list}[\text{Byte}]): \text{cons?}(bl2))$ $(\text{split}(size', \text{floor}(\text{expt}(2, size'))(a') + \text{expt}(2, size'),$ $\text{tail}(bl', \text{expt}(2, size') - \text{rem}(\text{expt}(2, size'))(\text{offset}(a'))))$

Hiding formulas: 3,

Using lemma `length_tail`,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_no_null.2.2.2`.

`split_no_null.2.3`:

{-1}	$size' \geq 0$
{-2}	$j' \geq 0$
{-3}	$\forall k:$ $k < j' \supset$ $(\forall (size: \text{nat}, a: \text{Address}, bl: \text{list}[\text{Byte}]):$ $k = \text{length}(bl) \wedge \text{cons?}(bl) \supset$ $\text{every}(\lambda (a_2: \text{Address}, bl2: \text{list}[\text{Byte}]): \text{cons?}(bl2))(\text{split}(size, a, bl)))$
{-4}	$j' = \text{length}(bl')$
{-5}	$\text{cons?}(bl')$
{1}	$a' + \text{length}(bl') \leq \text{floor}(\text{expt}(2, size'))(a') + \text{expt}(2, size')$
{2}	$\text{cons?}(\text{head}(bl', \text{expt}(2, size') - \text{rem}(\text{expt}(2, size'))(\text{offset}(a'))))$

Expanding the definition of `head`,

which is trivially true.

This completes the proof of `split_no_null.2.3`.

Q.E.D.

C.118.7 List_Split.split_null

Terse proof for `split_null`.

`split_null`:

{1}	$\forall (size: \text{nat}, a: \text{Address}): \text{split}(size, a, \text{null}) = \text{null}$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_null`.

Q.E.D.

C.118.8 List_Split.split_type_TCC1

Terse proof for `split_type_TCC1`.

split_type_TCC1:

{1} Mem?(min_linear 'type_of)

Expanding the definition of min_linear,

Expanding the definition of Mem,

which is trivially true.

This completes the proof of split_type_TCC1.

Q.E.D.

C.118.9 List_Split.split_type_TCC2

Terse proof for split_type_TCC2.

split_type_TCC2:

{1} $\forall (a: \text{Address}): \text{reg_base}(\text{min_linear})(\text{type_of}(a)) \leq a \supset \text{Mem}?(\text{max_linear} ' \text{type_of})$

Expanding the definition of max_linear,

Expanding the definition of Mem,

which is trivially true.

This completes the proof of split_type_TCC2.

Q.E.D.

C.118.10 List_Split.split_type

Terse proof for split_type.

split_type:

{1} $\forall (\text{size}: \text{nat}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}], n: \text{nat}):$
 $\text{reg_base}(\text{min_linear})(\text{type_of}(a)) \leq a \wedge$
 $a + \text{length}(\text{bl}) \leq \text{reg_size}(\text{max_linear})(\text{type_of}(a))$
 \supset
 $\text{every}(\lambda (t: [\text{Address}, \text{list}[\text{Byte}]]):$
 $\text{type_of}(t'1) = \text{type_of}(a) \wedge$
 $\text{reg_base}(\text{min_linear})(\text{type_of}(a)) \leq t'1 \wedge$
 $t'1 < \text{reg_size}(\text{max_linear})(\text{type_of}(a)))$
 $(\text{split}(\text{min_page}, a, \text{bl}))$

Repeatedly Skolemizing and flattening,

Hiding formulas: -2,

Case splitting on bl!1 = null,

we get 2 subgoals:

split_type.1:

{-1}	$bl' = \text{null}$
{-2}	$\text{size}' \geq 0$
{-3}	$n' \geq 0$
{-4}	$\text{reg_base}(\text{min_linear})(\text{type_of}(a')) \leq a'$
{-5}	$a' + \text{length}(bl') \leq \text{reg_size}(\text{max_linear})(\text{type_of}(a'))$
{1} $\text{every}(\lambda (t: [\text{Address}, \text{list}[\text{Byte}]]):$ $\text{type_of}(t'1) = \text{type_of}(a') \wedge$ $\text{reg_base}(\text{min_linear})(\text{type_of}(a')) \leq t'1 \wedge$ $t'1 < \text{reg_size}(\text{max_linear})(\text{type_of}(a'))$ $(\text{split}(\text{min_page}, a', bl'))$	

Using lemma `split_null`,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_type.1`.

split_type.2:

{-1}	$\text{size}' \geq 0$
{-2}	$n' \geq 0$
{-3}	$\text{reg_base}(\text{min_linear})(\text{type_of}(a')) \leq a'$

Using lemma `split_range`,

Using lemma `split_no_null`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Using lemma `every_implied`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

split_type.2.1:

{-1}	$\text{cons?}(bl')$
{-2}	$\text{every}(\lambda (a_2: \text{Address}, bl2: \text{list}[\text{Byte}]): \text{cons?}(bl2))(\text{split}(\text{min_page}, a', bl'))$
{-3}	$\text{every}(\lambda (a_2: \text{Address}, bl2: \text{list}[\text{Byte}]):$ $a' \leq a_2 \wedge a_2 + \text{length}(bl2) \leq a' + \text{length}(bl')$ $(\text{split}(\text{min_page}, a', bl'))$
{-4}	$\text{size}' \geq 0$
{-5}	$n' \geq 0$
{-6}	$\text{reg_base}(\text{min_linear})(\text{type_of}(a')) \leq a'$
{-7}	$a' + \text{length}(bl') \leq \text{reg_size}(\text{max_linear})(\text{type_of}(a'))$
{1} $\text{every}(\lambda (a_2: \text{Address}, bl2: \text{list}[\text{Byte}]):$ $\text{cons?}(bl2) \wedge a' \leq a_2 \wedge a_2 + \text{length}(bl2) \leq a' + \text{length}(bl')$ $(\text{split}(\text{min_page}, a', bl'))$ {2} $\text{every}(\lambda (t: [\text{Address}, \text{list}[\text{Byte}]]):$ $\text{type_of}(t'1) = \text{type_of}(a') \wedge$ $\text{reg_base}(\text{min_linear})(\text{type_of}(a')) \leq t'1 \wedge$ $t'1 < \text{reg_size}(\text{max_linear})(\text{type_of}(a'))$ $(\text{split}(\text{min_page}, a', bl'))$	

Using lemma `every_conjunct_left`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `split_type.2.1`.

`split_type.2.2`:

{-1}	<code>cons?(bl')</code>
{-2}	<code>every(λ (a₂: Address, bl2: list[Byte]): cons?(bl2))(split(min_page, a', bl'))</code>
{-3}	<code>every(λ (a₂: Address, bl2: list[Byte]): a' ≤ a₂ ∧ a₂ + length(bl2) ≤ a' + length(bl')) (split(min_page, a', bl'))</code>
{-4}	<code>size' ≥ 0</code>
{-5}	<code>n' ≥ 0</code>
{-6}	<code>reg_base(min_linear)(type_of(a')) ≤ a'</code>
{-7}	<code>a' + length(bl') ≤ reg_size(max_linear)(type_of(a'))</code>
{1}	<code>∀ (t₁: [Address, list[Byte]]): cons?(t₁'2) ∧ a' ≤ t₁'1 ∧ t₁'1 + length(t₁'2) ≤ a' + length(bl') ⊃ type_of(t₁'1) = type_of(a') ∧ reg_base(min_linear)(type_of(a')) ≤ t₁'1 ∧ t₁'1 < reg_size(max_linear)(type_of(a'))</code>
{2}	<code>every(λ (t: [Address, list[Byte]]): type_of(t'1) = type_of(a') ∧ reg_base(min_linear)(type_of(a')) ≤ t'1 ∧ t'1 < reg_size(max_linear)(type_of(a')) (split(min_page, a', bl'))</code>

Hiding formulas: (-2 -3 2),

Repeatedly Skolemizing and flattening,

Expanding the definition of `<=`,

Expanding the definition of `<`,

Expanding the definition of `+`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of `length`,

Keeping (-5 -12 1) and hiding `*`,

Adding type constraints for `length(cdr(t!1'2))`,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `split_type.2.2`.

Q.E.D.

C.119 Proofs for LogicalExpressions (expressions.pvs)

This theory contains no provable formal statements.

C.120 Proofs for LvalueToRvalueConversion (conversions.pvs)

This theory contains no provable formal statements.

C.121 Proofs for Memory (memory.pvs)

C.121.1 Memory.memory_write_list_nse_TCC1

Terse proof for memory_write_list_nse_TCC1.

memory_write_list_nse_TCC1:

$$\frac{}{\{1\} \quad \forall (bl: \text{list}[\text{Byte}], b: \text{Byte}, rl: \text{list}[\text{Byte}]): bl = \text{cons}(b, rl) \supset \text{cons}^?[\text{Byte}](bl)}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of memory_write_list_nse_TCC1.

Q.E.D.

C.121.2 Memory.memory_write_list_nse_TCC2

Terse proof for memory_write_list_nse_TCC2.

memory_write_list_nse_TCC2:

$$\frac{}{\{1\} \quad \forall (bl: \text{list}[\text{Byte}], b: \text{Byte}, rl: \text{list}[\text{Byte}]): \\ bl = \text{cons}(b, rl) \supset \text{length}[\text{Byte}](\text{cdr}[\text{Byte}](bl)) < \text{length}[\text{Byte}](bl)}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of memory_write_list_nse_TCC2.

Q.E.D.

C.121.3 Memory.memory_read_list_nse_TCC1

Terse proof for memory_read_list_nse_TCC1.

memory_read_list_nse_TCC1:

$$\frac{}{\{1\} \quad \forall (\text{size}: \text{nat}): \text{size} > 0 \supset \text{size} - 1 \geq 0}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of memory_read_list_nse_TCC1.

Q.E.D.

C.121.4 Memory.memory_read_list_nse_TCC2

Terse proof for memory_read_list_nse_TCC2.

memory_read_list_nse_TCC2:

$$\frac{}{\{1\} \quad \forall (\text{size}: \text{nat}): \text{size} > 0 \supset \text{size} - 1 < \text{size}}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of memory_read_list_nse_TCC2.

Q.E.D.

C.121.5 Memory.memory_read_list_ok_length

Terse proof for memory_read_list_ok_length.

memory_read_list_ok_length:

{1} \forall (addr: Address, pm: Memory_struct, s: State, size: nat):
 OK?(memory_read_list_nse(pm)(addr, size)(s)) \supset
 length(data(memory_read_list_nse(pm)(addr, size)(s))) = size

Inducting on size on formula 1,

we get 2 subgoals:

memory_read_list_ok_length.1:

{1} \forall (addr: Address, pm: Memory_struct, s: State):
 OK?(memory_read_list_nse(pm)(addr, 0)(s)) \supset
 length(data(memory_read_list_nse(pm)(addr, 0)(s))) = 0

Repeatedly Skolemizing and flattening,

Expanding the definition of memory_read_list_nse,

Expanding the definition of ok_result,

Expanding the definition of length,

which is trivially true.

This completes the proof of memory_read_list_ok_length.1.

memory_read_list_ok_length.2:

{1} $\forall j$:
 $(\forall$ (addr: Address, pm: Memory_struct, s: State):
 OK?(memory_read_list_nse(pm)(addr, j)(s)) \supset
 length(data(memory_read_list_nse(pm)(addr, j)(s))) = j)
 \supset
 $(\forall$ (addr: Address, pm: Memory_struct, s: State):
 OK?(memory_read_list_nse(pm)(addr, j + 1)(s)) \supset
 length(data(memory_read_list_nse(pm)(addr, j + 1)(s))) = j + 1)

Repeatedly Skolemizing and flattening,

Expanding the definition of memory_read_list_nse,

Expanding the definition of ##,

Expanding the definition of ok_result,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of length,

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of memory_read_list_ok_length.2.

Q.E.D.

C.121.6 Memory.memory_read_transformers_memory_read

Terse proof for memory_read_transformers_memory_read.

memory_read_transformers_memory_read:

{1} \forall (addresses: PRED[Address], pm: Memory_struct, addr: Address):
 addresses(addr) \supset
 memory_read_transformers(pm, addresses)(expr_2_super(memory_read(pm)(addr)))

Repeatedly Skolemizing and flattening,

Expanding the definition of `memory_read_transformers`,
 Instantiating quantified variables,
 This completes the proof of `memory_read_transformers_memory_read`.
 Q.E.D.

C.121.7 Memory.memory_read_transformers_mono

Terse proof for `memory_read_transformers_mono`.

`memory_read_transformers_mono`:

{1}	$\forall (pm: \text{Memory_struct}, \text{addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$ $(\text{addresses}_1 \subseteq \text{addresses}_2) \supset$ $(\text{memory_read_transformers}(pm, \text{addresses}_1) \subseteq \text{memory_read_transformers}(pm, \text{addresses}_2))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `memory_read_transformers_mono`.
 Q.E.D.

C.121.8 Memory.memory_read_transformers_union

Terse proof for `memory_read_transformers_union`.

`memory_read_transformers_union`:

{1}	$\forall (pm: \text{Memory_struct}, \text{addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$ $(\text{memory_read_transformers}(pm, \text{addresses}_1) \cup \text{memory_read_transformers}(pm, \text{addresses}_2))$ $= \text{memory_read_transformers}(pm, (\text{addresses}_1 \cup \text{addresses}_2))$
-----	--

Repeatedly Skolemizing and flattening,
 Expanding the definition of `memory_read_transformers`,
 Expanding the definition of union,
 Expanding the definition of member,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `memory_read_transformers_union`.
 Q.E.D.

C.121.9 Memory.memory_write_transformers_memory_write

Terse proof for `memory_write_transformers_memory_write`.

`memory_write_transformers_memory_write`:

{1}	$\forall (\text{addresses}: \text{PRED}[\text{Address}], pm: \text{Memory_struct}, \text{addr}: \text{Address}, b: \text{Byte}):$ $\text{addresses}(\text{addr}) \supset$ $\text{memory_write_transformers}(pm, \text{addresses})(\text{expr}_2\text{-super}(\text{memory_write}(pm)(\text{addr}, b)))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `memory_write_transformers_memory_write`.
 Q.E.D.

C.121.10 Memory.memory_write_transformers_mono

Terse proof for memory_write_transformers_mono.

memory_write_transformers_mono:

$$\{1\} \quad \forall (\text{pm: Memory_struct, addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$$

$$(\text{addresses}_1 \subseteq \text{addresses}_2) \supset$$

$$(\text{memory_write_transformers}(\text{pm}, \text{addresses}_1) \subseteq \text{memory_write_transformers}(\text{pm}, \text{addresses}_2))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of memory_write_transformers_mono.
Q.E.D.

C.121.11 Mem- memory.memory_read_side_effect_super_transformers_memory_read_side_effect

Terse proof for memory_read_side_effect_super_transformers_memory_read_side_effect.

memory_read_side_effect_super_transformers_memory_read_side_effect:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}, a: \text{Ad-}$$

$$\text{dress, bl: list}[\text{Byte}], \text{cp: bool}):$$

$$(\text{address_block}(a, \text{length}(\text{bl})) \subseteq \text{addresses}) \supset$$

$$\text{memory_read_side_effect_super_transformers}(\text{pm}, \text{addresses})$$

$$(\text{expr}_2\text{-super}(\text{memory_read_side_effect}(\text{pm}$$

$$(a, \text{bl}, \text{cp})))$$

Repeatedly Skolemizing and flattening,
Expanding the definition of memory_read_side_effect_super_transformers,
Instantiating quantified variables,
This completes the proof of memory_read_side_effect_super_transformers_memory_read_side_effect.
Q.E.D.

C.121.12 Memory.memory_read_side_effect_super_transformers_mono

Terse proof for memory_read_side_effect_super_transformers_mono.

memory_read_side_effect_super_transformers_mono:

$$\{1\} \quad \forall (\text{pm: Memory_struct, addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$$

$$(\text{addresses}_1 \subseteq \text{addresses}_2) \supset$$

$$(\text{memory_read_side_effect_super_transformers}(\text{pm}, \text{addresses}_1) \subseteq \text{memory_read_side_effect_super_transformers}(\text{pm}, \text{addresses}_2))$$

Repeatedly Skolemizing and flattening,
Expanding the definition of subset?,
Expanding the definition of member,
Expanding the definition of memory_read_side_effect_super_transformers,
Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
Forward chaining on subset_transitive,
This completes the proof of memory_read_side_effect_super_transformers_mono.

Q.E.D.

C.121.13 Memory.memory_write_side_effect_super_transformers_memory_write_side_effect

Terse proof for memory_write_side_effect_super_transformers_memory_write_side_effect.

memory_write_side_effect_super_transformers_memory_write_side_effect:

{1}	$\forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}, a: \text{Address}, \text{bl: list}[\text{Byte}], \text{cp: bool}):$ $(\text{address_block}(a, \text{length}(\text{bl})) \subseteq \text{addresses}) \supset$ $\text{memory_write_side_effect_super_transformers}(\text{pm}, \text{addresses})$ $= (\text{expr_2_super}(\text{memory_write_side_effect}(\text{pm}, a, \text{bl}, \text{cp})))$
-----	---

Repeatedly Skolemizing and flattening,

Expanding the definition of memory_write_side_effect_super_transformers,

Instantiating quantified variables,

This completes the proof of memory_write_side_effect_super_transformers_memory_write_side_effect.

Q.E.D.

C.121.14 Memory.memory_write_side_effect_super_transformers_mono

Terse proof for memory_write_side_effect_super_transformers_mono.

memory_write_side_effect_super_transformers_mono:

{1}	$\forall (\text{pm: Memory_struct}, \text{addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$ $(\text{addresses}_1 \subseteq \text{addresses}_2) \supset$ $(\text{memory_write_side_effect_super_transformers}(\text{pm}, \text{addresses}_1) \subseteq \text{memory_write_side_effect_super_transformers}(\text{pm}, \text{addresses}_2))$
-----	---

Repeatedly Skolemizing and flattening,

Expanding the definition of subset?,

Expanding the definition of member,

Expanding the definition of memory_write_side_effect_super_transformers,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

Forward chaining on subset_transitive,

This completes the proof of memory_write_side_effect_super_transformers_mono.

Q.E.D.

C.121.15 Memory.side_effect_content_unchanged_content

Terse proof for side_effect_content_unchanged_content.

side_effect_content_unchanged_content:

$$\{1\} \quad \forall (\text{se_transformer} : \\ \quad [[\text{Address}, \text{list}[\text{Byte}], \text{bool}] \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{list}[\text{Byte}]]]], \\ \quad \text{states} : \text{PRED}[\text{State}], \text{addresses} : \text{PRED}[\text{Address}], s : \text{State}, a : \text{Ad-} \\ \text{dress}, \text{bl} : \text{list}[\text{Byte}], \\ \quad \text{cp} : \text{bool}) : \\ \text{side_effect_content_unchanged}(\text{addresses}, \text{states}, \text{se_transformer}) \wedge \\ \text{states}(s) \wedge \\ (\text{address_block}(a, \text{length}(\text{bl})) \subseteq \text{addresses}) \wedge \\ \text{OK}?(\text{se_transformer}(a, \text{bl}, \text{cp})(s)) \\ \supset \text{data}(\text{se_transformer}(a, \text{bl}, \text{cp})(s)) = \text{bl}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of side_effect_content_unchanged_content.

Q.E.D.

C.121.16 Memory.side_effect_content_unchanged_mono

Terse proof for side_effect_content_unchanged_mono.

side_effect_content_unchanged_mono:

$$\{1\} \quad \forall (\text{se_transformer} : \\ \quad [[\text{Address}, \text{list}[\text{Byte}], \text{bool}] \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{list}[\text{Byte}]]]], \\ \quad \text{states} : \text{PRED}[\text{State}], \text{addresses}_1, \text{addresses}_2 : \text{PRED}[\text{Address}]) : \\ (\text{addresses}_1 \subseteq \text{addresses}_2) \wedge \\ \text{side_effect_content_unchanged}(\text{addresses}_2, \text{states}, \text{se_transformer}) \\ \supset \text{side_effect_content_unchanged}(\text{addresses}_1, \text{states}, \text{se_transformer})$$

Expanding the definition of side_effect_content_unchanged,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-2 -5 1) and hiding *,

Rewriting using subset_transitive, matching in * where a gets address_block(a!1, length(bl!1)), b gets addresses!1, c gets addresses!2,

This completes the proof of side_effect_content_unchanged_mono.

Q.E.D.

C.121.17 Memory.side_effect_content_unchanged_composition

Terse proof for side_effect_content_unchanged_composition.

side_effect_content_unchanged_composition:

{1}	$\forall (\text{addresses: PRED}[\text{Address}],$ $\text{se_transformer1},$ se_transformer2: $[[\text{Address}, \text{list}[\text{Byte}], \text{bool}] \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{list}[\text{Byte}]]]],$ $\text{states: PRED}[\text{State}]):$ $\text{transformer_invariant?}(\text{states}, \text{se_super_transformers}(\text{addresses}, \text{se_transformer1})) \wedge$ $\text{side_effect_content_unchanged}(\text{addresses}, \text{states}, \text{se_transformer1}) \wedge$ $\text{side_effect_content_unchanged}(\text{addresses}, \text{states}, \text{se_transformer2})$ \supset $\text{side_effect_content_unchanged}(\text{addresses}, \text{states},$ $\lambda (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}], \text{cp}: \text{bool}):$ $\text{se_transformer1}(a, \text{bl}, \text{cp}) \#\#$ $(\lambda (\text{bl1}: \text{list}[\text{Byte}]): \text{se_transformer2}(a, \text{bl1}, \text{cp})))$
-----	---

Expanding the definition of side_effect_content_unchanged,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in -3 with the terms: (s!1 a!1 bl!1 cp!1),

Expanding the definition of ##,

Installing automatic rewrites from: has_next_state

Using lemma expr_transformer_invariant_next_ok,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

side_effect_content_unchanged_composition.1:

{-1}	transformer_invariant?(states', se_super_transformers(addresses', se_transformer1'))
{-2}	states'(s')
{-3}	states'(state(se_transformer1'(a', bl', cp')(s')))
{-4}	every($\lambda (x: \text{number}):$ $\text{number_field_pred}(x) \wedge$ $\text{real_pred}(x) \wedge$ $\text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte}$ (bl'))
{-5}	(address_block(a', length(bl')) \subseteq addresses')
{-6}	data(se_transformer1'(a', bl', cp')(s')) = bl'
{-7}	$\forall (s: \text{State}, a: \text{Address}, \text{bl}: \text{list}[\text{Byte}], \text{cp}: \text{bool}):$ states'(s) \wedge (address_block(a, length(bl)) \subseteq addresses') \wedge OK?(se_transformer2'(a, bl, cp)(s)) \supset data(se_transformer2'(a, bl, cp)(s)) = bl
{-8}	OK?(se_transformer1'(a', bl', cp')(s'))
{-9}	OK?(se_transformer2'(a', data(se_transformer1'(a', bl', cp')(s')), cp') (state(se_transformer1'(a', bl', cp')(s'))))
{1}	$\text{data}(\text{se_transformer2}'(a', \text{data}(\text{se_transformer1}'(a', \text{bl}', \text{cp}')(s')), \text{cp}')$ (state(se_transformer1'(a', bl', cp')(s')))) = bl'

Instantiating the top quantifier in -7 with the terms: (state(se_transformer1!1(a!1, bl!1, cp!1)(s!1)) a!1 bl!1 cp!1),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of side_effect_content_unchanged_composition.1.

side_effect_content_unchanged_composition.2:

<pre> {-1} transformer_invariant?(states', se_super_transformers(addresses', se_transformer1')) {-2} states'(s') {-3} every(λ (x: number): number_field_pred(x) ∧ real_pred(x) ∧ rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte) (bl') {-4} (address_block(a', length(bl')) ⊆ addresses') {-5} data(se_transformer1'(a', bl', cp')(s')) = bl' {-6} ∀ (s: State, a: Address, bl: list[Byte], cp: bool): states'(s) ∧ (address_block(a, length(bl)) ⊆ addresses') ∧ OK?(se_transformer2'(a, bl, cp)(s)) ⊃ data(se_transformer2'(a, bl, cp)(s)) = bl {-7} OK?(se_transformer1'(a', bl', cp')(s')) {-8} OK?(se_transformer2'(a', data(se_transformer1'(a', bl', cp')(s')), cp') (state(se_transformer1'(a', bl', cp')(s')))) </pre>	<pre> {1} se_super_transformers(addresses', se_transformer1') (expr_2_super(se_transformer1'(a', bl', cp'))) {2} data(se_transformer2'(a', data(se_transformer1'(a', bl', cp')(s')), cp') (state(se_transformer1'(a', bl', cp')(s')))) = bl' </pre>
---	---

Expanding the definition of se_super_transformers,

Instantiating quantified variables,

This completes the proof of side_effect_content_unchanged_composition.2.

Q.E.D.

C.122 Proofs for Memory_Change (memory.pvs)

C.122.1 Memory_Change.unchanged_memory_invariant?_TCC1

Terse proof for unchanged_memory_invariant?_TCC1.

unchanged_memory_invariant?_TCC1:

<pre> {1} ∀ (pm: Memory_struct[State], states: PRED[State], transformers: PRED[[State → SuperResult[State]]], ad- dresses: PRED[Address]): transformer_invariant?(states, transformers) ⊃ (∀ (s: State, q: [State → SuperResult[State]], a: Address): OK?(memory_read(pm)(a)(s)) ∧ OK?(q(s)) ∧ addresses(a) ∧ transformers(q) ∧ states(s) ⊃ OK?[State](q(s)) ∨ abnormal?[State](q(s))) </pre>	
---	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of unchanged_memory_invariant?_TCC1.

Q.E.D.

C.122.2

Memory_Change.unchanged_memory_invariant_unchanged_TCC1

Terse proof for `unchanged_memory_invariant_unchanged_TCC1`.

`unchanged_memory_invariant_unchanged_TCC1`:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \text{OK?}(\text{memory_read}(\text{pm})(a)(s)) \wedge \\ \text{OK?}(q(s)) \wedge \\ \text{addresses}(a) \wedge \\ \text{transformers}(q) \wedge \\ \text{states}(s) \wedge \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses}) \\ \supset \text{OK?}[\text{State}](q(s)) \vee \text{abnormal?}[\text{State}](q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `unchanged_memory_invariant_unchanged_TCC1`.

Q.E.D.

C.122.3 Memory_Change.unchanged_memory_invariant_unchanged

Terse proof for `unchanged_memory_invariant_unchanged`.

`unchanged_memory_invariant_unchanged`:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses}) \wedge \\ \text{states}(s) \wedge \\ \text{transformers}(q) \wedge \\ \text{addresses}(a) \wedge \\ \text{OK?}(q(s)) \wedge \\ \text{OK?}(\text{memory_read}(\text{pm})(a)(s)) \wedge \text{OK?}(\text{memory_read}(\text{pm})(a)(\text{state}(q(s)))) \\ \supset \text{data}(\text{memory_read}(\text{pm})(a)(\text{state}(q(s)))) = \text{data}(\text{memory_read}(\text{pm})(a)(s))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of `unchanged_memory_invariant?`,

Applying disjunctive simplification to flatten sequent,

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `unchanged_memory_invariant_unchanged`.

Q.E.D.

C.122.4 Memory_Change.unchanged_memory_invariant_invariant

Terse proof for `unchanged_memory_invariant_invariant`.

unchanged_memory_invariant_invariant:

$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses}) \supset \\ \text{transformer_invariant?}(\text{states}, \text{transformers})$

Repeatedly Skolemizing and flattening,
 Expanding the definition of unchanged_memory_invariant?,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of unchanged_memory_invariant_invariant.
 Q.E.D.

C.122.5 Memory_Change.unchanged_memory_invariant_mono

Terse proof for unchanged_memory_invariant_mono.

unchanged_memory_invariant_mono:

$\{1\} \quad \forall (\text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], \\ \text{addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]): \\ (\text{transformers}_1 \subseteq \text{transformers}_2) \wedge \\ (\text{addresses}_1 \subseteq \text{addresses}_2) \wedge \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}_2, \text{addresses}_2) \\ \supset \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}_1, \text{addresses}_1)$
--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unchanged_memory_invariant_mono.
 Q.E.D.

C.122.6

Memory_Change.unchanged_memory_invariant_next_ok_TCC1

Terse proof for unchanged_memory_invariant_next_ok_TCC1.

unchanged_memory_invariant_next_ok_TCC1:

$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]): \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses}) \wedge \\ \text{states}(s) \wedge \text{transformers}(q) \wedge \text{has_next_state}(q(s)) \\ \supset \text{OK?}[\text{State}](q(s)) \vee \text{abnormal?}[\text{State}](q(s))$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unchanged_memory_invariant_next_ok_TCC1.
 Q.E.D.

C.122.7 Memory_Change.unchanged_memory_invariant_next_ok

Terse proof for unchanged_memory_invariant_next_ok.

C Proof scripts

unchanged_memory_invariant_next_ok:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]): \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses}) \wedge \\ \text{states}(s) \wedge \text{transformers}(q) \wedge \text{has_next_state}(q(s)) \\ \supset \text{states}(\text{state}(q(s)))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of `unchanged_memory_invariant?`,

Applying disjunctive simplification to flatten sequent,

Using lemma `super_transformer_invariant_next_ok[State]`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `unchanged_memory_invariant_next_ok`.

Q.E.D.

C.122.8

Memory_Change.unchanged_memory_invariant_union_transformers

Terse proof for `unchanged_memory_invariant_union_transformers`.

unchanged_memory_invariant_union_transformers:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}_1, \text{addresses}) \wedge \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}_2, \text{addresses}) \\ \supset \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, (\text{transformers}_1 \cup \text{transformers}_2), \text{ad-} \\ \text{resses})$$

Installing automatic rewrites from: `member`

Repeatedly Skolemizing and flattening,

Expanding the definition of `unchanged_memory_invariant?`,

Applying propositional simplification,

we get 2 subgoals:

unchanged_memory_invariant_union_transformers.1:

{-1}	transformer_invariant?(states', transformers')
{-2}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ states'(s) \wedge transformers'(q) \wedge addresses'(a) \wedge OK?(q(s)) \wedge OK?(memory_read(pm')(a)(s)) \wedge OK?(memory_read(pm')(a)(state(q(s)))) \supset data(memory_read(pm')(a)(state(q(s)))) = data(memory_read(pm')(a)(s))
{-3}	transformer_invariant?(states', transformers'')
{-4}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ states'(s) \wedge transformers''(q) \wedge addresses'(a) \wedge OK?(q(s)) \wedge OK?(memory_read(pm')(a)(s)) \wedge OK?(memory_read(pm')(a)(state(q(s)))) \supset data(memory_read(pm')(a)(state(q(s)))) = data(memory_read(pm')(a)(s))
{1}	transformer_invariant?(states', (transformers' \cup transformers''))

Rewriting using transformer_invariant_union_transformers, matching in *,

This completes the proof of unchanged_memory_invariant_union_transformers.1.

unchanged_memory_invariant_union_transformers.2:

$\begin{array}{l} \{-1\} \text{ transformer_invariant?}(\text{states}', \text{transformers}') \\ \{-2\} \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \quad \text{states}'(s) \wedge \\ \quad \text{transformers}'(q) \wedge \\ \quad \text{addresses}'(a) \wedge \\ \quad \text{OK?}(q(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) \\ \quad \supset \\ \quad \text{data}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) = \text{data}(\text{memory_read}(\text{pm}') (a)(s)) \\ \{-3\} \text{ transformer_invariant?}(\text{states}', \text{transformers}'') \\ \{-4\} \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \quad \text{states}'(s) \wedge \\ \quad \text{transformers}''(q) \wedge \\ \quad \text{addresses}'(a) \wedge \\ \quad \text{OK?}(q(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) \\ \quad \supset \\ \quad \text{data}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) = \text{data}(\text{memory_read}(\text{pm}') (a)(s)) \end{array}$	<hr style="border: 0.5px solid black;"/> $\begin{array}{l} \{1\} \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \quad \text{states}'(s) \wedge \\ \quad \text{union}(\text{transformers}', \text{transformers}'')(q) \wedge \\ \quad \text{addresses}'(a) \wedge \\ \quad \text{OK?}(q(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(s)) \wedge \\ \quad \text{OK?}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) \\ \quad \supset \\ \quad \text{data}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) = \text{data}(\text{memory_read}(\text{pm}') (a)(s)) \end{array}$
---	---

Hiding formulas: (-1 -3),

Repeatedly Skolemizing and flattening,

Expanding the definition of union,

Splitting conjunctions,

we get 2 subgoals:

unchanged_memory_invariant_union_transformers.2.1:

<div style="display: flex; flex-direction: column; gap: 5px;"> <div style="display: flex; align-items: flex-start;"> {-1} $(q' \in \text{transformers}')$ </div> <div style="display: flex; align-items: flex-start;"> {-2} $\text{states}'(s')$ </div> <div style="display: flex; align-items: flex-start;"> {-3} $\text{addresses}'(a')$ </div> <div style="display: flex; align-items: flex-start;"> {-4} $\text{OK?}(q'(s'))$ </div> <div style="display: flex; align-items: flex-start;"> {-5} $\text{OK?}(\text{memory_read}(\text{pm}'))(a')(s')$ </div> <div style="display: flex; align-items: flex-start;"> {-6} $\text{OK?}(\text{memory_read}(\text{pm}'))(a')(\text{state}(q'(s')))$ </div> <div style="display: flex; align-items: flex-start;"> {-7} $\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ $\text{states}'(s) \wedge$ $\text{transformers}'(q) \wedge$ $\text{addresses}'(a) \wedge$ $\text{OK?}(q(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{pm}'))(a)(s) \wedge$ $\text{OK?}(\text{memory_read}(\text{pm}'))(a)(\text{state}(q(s)))$ \supset $\text{data}(\text{memory_read}(\text{pm}'))(a)(\text{state}(q(s))) = \text{data}(\text{memory_read}(\text{pm}'))(a)(s)$ </div> <div style="display: flex; align-items: flex-start;"> {-8} $\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ $\text{states}'(s) \wedge$ $\text{transformers}''(q) \wedge$ $\text{addresses}'(a) \wedge$ $\text{OK?}(q(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{pm}'))(a)(s) \wedge$ $\text{OK?}(\text{memory_read}(\text{pm}'))(a)(\text{state}(q(s)))$ \supset $\text{data}(\text{memory_read}(\text{pm}'))(a)(\text{state}(q(s))) = \text{data}(\text{memory_read}(\text{pm}'))(a)(s)$ </div> </div>	<div style="display: flex; align-items: flex-start; border-top: 1px solid black; border-left: 1px solid black; border-right: 1px solid black; padding: 5px 10px 5px 10px;"> {1} $\text{data}(\text{memory_read}(\text{pm}'))(a')(\text{state}(q'(s'))) =$ $\text{data}(\text{memory_read}(\text{pm}'))(a')(s')$ </div>
---	--

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of unchanged_memory_invariant_union_transformers.2.1.

unchanged_memory_invariant_union_transformers.2.2:

<pre> {-1} (q' ∈ transformers'') {-2} states'(s') {-3} addresses'(a') {-4} OK?(q'(s')) {-5} OK?(memory_read(pm')(a')(s')) {-6} OK?(memory_read(pm')(a')(state(q'(s')))) {-7} ∀ (s: State, q: [State → SuperResult[State]], a: Address): states'(s) ∧ transformers'(q) ∧ addresses'(a) ∧ OK?(q(s)) ∧ OK?(memory_read(pm')(a)(s)) ∧ OK?(memory_read(pm')(a)(state(q(s)))) ⊃ data(memory_read(pm')(a)(state(q(s)))) = data(memory_read(pm')(a)(s)) {-8} ∀ (s: State, q: [State → SuperResult[State]], a: Address): states'(s) ∧ transformers''(q) ∧ addresses'(a) ∧ OK?(q(s)) ∧ OK?(memory_read(pm')(a)(s)) ∧ OK?(memory_read(pm')(a)(state(q(s)))) ⊃ data(memory_read(pm')(a)(state(q(s)))) = data(memory_read(pm')(a)(s)) </pre>	<hr style="border: 0.5px solid black; margin-bottom: 5px;"/> <pre> {1} data(memory_read(pm')(a')(state(q'(s')))) = data(memory_read(pm')(a')(s')) </pre>
---	---

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `unchanged_memory_invariant_union_transformers.2.2`.

Q.E.D.

C.122.9

Memory_Change.unchanged_memory_invariant_union_addresses

Terse proof for `unchanged_memory_invariant_union_addresses`.

`unchanged_memory_invariant_union_addresses`:

<pre> {1} ∀ (pm: Memory_struct[State], states: PRED[State], transformers: PRED[[State → SuperResult[State]]], addresses_1, addresses_2: PRED[Address]): unchanged_memory_invariant?(pm, states, transformers, addresses_1) ∧ unchanged_memory_invariant?(pm, states, transformers, addresses_2) ⊃ unchanged_memory_invariant?(pm, states, transform- ers, (addresses_1 ∪ addresses_2)) </pre>	<hr style="border: 0.5px solid black; margin-bottom: 5px;"/>
--	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `unchanged_memory_invariant_union_addresses`.

Q.E.D.

C.122.10 Memory_Change.unchanged_memory_invariant_empty

Terse proof for `unchanged_memory_invariant_empty`.

`unchanged_memory_invariant_empty`:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ \text{empty?}(\text{states}) \vee \text{empty?}(\text{transformers}) \supset \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `unchanged_memory_invariant_empty`.

Q.E.D.

C.122.11

Memory_Change.unchanged_memory_invariant_all_transformers

Terse proof for `unchanged_memory_invariant_all_transformers`.

`unchanged_memory_invariant_all_transformers`:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \\ \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ (\forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]): \\ \text{transformers}(q) \supset \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{singleton}(q), \text{ad-} \\ \text{resses})) \\ \supset \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \text{transformers}, \text{addresses})$$

Expanding the definition of `unchanged_memory_invariant?`,

Repeatedly Skolemizing and flattening,

Applying propositional simplification,

we get 2 subgoals:

`unchanged_memory_invariant_all_transformers.1`:

$$\{-1\} \quad \forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]): \\ \text{transformers}'(q) \supset \\ \text{transformer_invariant?}(\text{states}', \text{singleton}(q)) \wedge \\ (\forall (s: \text{State}, q_1: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}): \\ \text{states}'(s) \wedge \\ \text{singleton}(q)(q_1) \wedge \\ \text{addresses}'(a) \wedge \\ \text{OK?}(q_1(s)) \wedge \\ \text{OK?}(\text{memory_read}(\text{pm}')(a)(s)) \wedge \\ \text{OK?}(\text{memory_read}(\text{pm}')(a)(\text{state}(q_1(s)))) \\ \supset \\ \text{data}(\text{memory_read}(\text{pm}')(a)(\text{state}(q_1(s)))) = \\ \text{data}(\text{memory_read}(\text{pm}')(a)(s))) \\ \{1\} \quad \text{transformer_invariant?}(\text{states}', \text{transformers}')$$

Rewriting using `transformer_invariant_all_transformers`, matching in `*`,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `unchanged_memory_invariant_all_transformers.1`.

unchanged_memory_invariant_all_transformers.2:

$\{-1\} \quad \forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformers}'(q) \supset$ $\text{transformer_invariant}'(\text{states}', \text{singleton}(q)) \wedge$ $(\forall (s: \text{State}, q_1: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ $\text{states}'(s) \wedge$ $\text{singleton}(q)(q_1) \wedge$ $\text{addresses}'(a) \wedge$ $\text{OK}'(q_1(s)) \wedge$ $\text{OK}'(\text{memory_read}(\text{pm}') (a)(s)) \wedge$ $\text{OK}'(\text{memory_read}(\text{pm}') (a)(\text{state}(q_1(s))))$ \supset $\text{data}(\text{memory_read}(\text{pm}') (a)(\text{state}(q_1(s)))) =$ $\text{data}(\text{memory_read}(\text{pm}') (a)(s)))$	$\{1\} \quad \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]], a: \text{Address}):$ $\text{states}'(s) \wedge$ $\text{transformers}'(q) \wedge$ $\text{addresses}'(a) \wedge$ $\text{OK}'(q(s)) \wedge$ $\text{OK}'(\text{memory_read}(\text{pm}') (a)(s)) \wedge$ $\text{OK}'(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s))))$ \supset $\text{data}(\text{memory_read}(\text{pm}') (a)(\text{state}(q(s)))) = \text{data}(\text{memory_read}(\text{pm}') (a)(s))$
--	--

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of singleton,

which is trivially true.

This completes the proof of `unchanged_memory_invariant_all_transformers.2`.

Q.E.D.

C.123 Proofs for Memory_Change_2 (memory.pvs)

C.123.1 Mem-

ory_Change_2.unchanged_memory_write_invariant_mono_addresses

Terse proof for `unchanged_memory_write_invariant_mono_addresses`.

`unchanged_memory_write_invariant_mono_addresses`:

$\{1\} \quad \forall (\text{pm}: \text{Memory_struct}[\text{State}], \text{states}: \text{PRED}[\text{State}],$ $\text{addresses}_1, \text{addresses}_2: \text{PRED}[\text{Address}]):$ $(\text{addresses}_1 \subseteq \text{addresses}_2) \wedge \text{unchanged_memory_write_invariant}'(\text{pm}, \text{states}, \text{ad-}$ $\text{resses}_2)$ $\supset \text{unchanged_memory_write_invariant}'(\text{pm}, \text{states}, \text{addresses}_1)$	
---	--

Repeatedly Skolemizing and flattening,

Expanding the definition of `unchanged_memory_write_invariant'`,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,
 Applying propositional simplification,
 we get 2 subgoals:

unchanged_memory_write_invariant_mono_addresses.1:

$\{-1\}$	$\text{unchanged_memory_invariant?}(pm', \text{states}',$ $\quad \text{singleton}(\text{expr_2_super}(\text{memory_write}(pm')(\text{waddr}', b')),$ $\quad (\text{addresses}'' \setminus \{\text{waddr}'\}))$
$\{-2\}$	$b' < \text{max_byte}$
$\{-3\}$	$(\text{addresses}' \subseteq \text{addresses}'')$
$\{-4\}$	$\text{addresses}'(\text{waddr}')$
$\{1\}$	
$\{1\}$	$\text{unchanged_memory_invariant?}(pm', \text{states}',$ $\quad \text{singleton}(\text{expr_2_super}(\text{memory_write}(pm')(\text{waddr}', b')),$ $\quad (\text{addresses}' \setminus \{\text{waddr}'\}))$

Using lemma unchanged_memory_invariant_mono,
 Simplifying, rewriting, and recording with decision procedures,
 Rewriting using subset_equal, matching in *,
 Keeping (-3 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unchanged_memory_write_invariant_mono_addresses.1.

unchanged_memory_write_invariant_mono_addresses.2:

$\{-1\}$	$b' < \text{max_byte}$
$\{-2\}$	$(\text{addresses}' \subseteq \text{addresses}'')$
$\{-3\}$	$\text{addresses}'(\text{waddr}')$
$\{1\}$	
$\{1\}$	$\text{addresses}''(\text{waddr}')$
$\{2\}$	$\text{unchanged_memory_invariant?}(pm', \text{states}',$ $\quad \text{singleton}(\text{expr_2_super}(\text{memory_write}(pm')(\text{waddr}', b')),$ $\quad (\text{addresses}' \setminus \{\text{waddr}'\}))$

Installing automatic rewrites from: subset? singleton member

Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier instantiation, skolemization, if-lifting and equality replacement,

This completes the proof of unchanged_memory_write_invariant_mono_addresses.2.

Q.E.D.

C.123.2 Memory_Change_2.unchanged_memory_write_invariant_transformer_invariant

Terse proof for unchanged_memory_write_invariant_transformer_invariant.

unchanged_memory_write_invariant_transformer_invariant:

Simplifying, rewriting, and recording with decision procedures,

Installing automatic rewrites from: difference_subset difference_disjoint_3

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of unchanged_memory_invariant_union.1.2.

unchanged_memory_invariant_union.2:

{-1}	unchanged_memory_invariant?(pm', states', memory_write_transformers(pm', rw_addr'), ro_addr')
{-2}	unchanged_memory_write_invariant?(pm', states', rw_addr')
{-3}	(mod_addr' \subseteq rw_addr')
{1}	((ro_addr' \cup rw_addr') \ mod_addr') = ((ro_addr' \ mod_addr') \cup (rw_addr' \ mod_addr'))
{2}	unchanged_memory_invariant?(pm', states', memory_write_transformers(pm', mod_addr'), ((ro_addr' \cup rw_addr') \ mod_addr'))

Keeping (-3 1) and hiding *,

Trying repeated skolemization, instantiation, if-lifting, and extensionality,

This completes the proof of unchanged_memory_invariant_union.2.

Q.E.D.

C.123.5 Memory_Change_2.transformer_invariant_write_list_nse

Terse proof for transformer_invariant_write_list_nse.

transformer_invariant_write_list_nse:

{1}	\forall (pm: Memory_struct[State], states: PRED[State], waddr: Ad- dress, bl: list[Byte], s: State): transformer_invariant?(states, memory_write_transformers(pm, ad- dress_block(waddr, length(bl)))) \wedge states(s) \supset result_pred(states)(expr_2_super(memory_write_list_nse(pm)(waddr, bl))(s))
-----	---

For the top quantifier in 1, we introduce Skolem constants: (pm' _ _ _ _),

Inducting on bl on formula 1,

we get 2 subgoals:

C Proof scripts

transformer_invariant_write_list_nse.1:

$$\{1\} \quad \forall (states: \text{PRED}[\text{State}], waddr: \text{Address}, s: \text{State}):$$

$$\begin{aligned} & \text{transformer_invariant?}(states, \\ & \qquad \qquad \qquad \text{memory_write_transformers}(pm', \\ & \qquad \qquad \qquad \qquad \qquad \qquad \text{ad-} \\ & \text{dress_block}(waddr, \text{length}(\text{null}))) \\ & \quad \wedge \text{states}(s) \\ & \quad \supset \text{result_pred}(states)(\text{expr_2_super}(\text{memory_write_list_nse}(pm')(waddr, \text{null}))(s)) \end{aligned}$$

Expanding the definition of memory_write_list_nse,

Expanding the definition(s) of (ok_result expr_2_super expr_2_super_res result_pred has_next_state),

Repeatedly Skolemizing and flattening,

This completes the proof of transformer_invariant_write_list_nse.1.

transformer_invariant_write_list_nse.2:

$$\{1\} \quad \forall (cons1_var: \text{Byte}, cons2_var: \text{list}[\text{Byte}]):$$

$$\begin{aligned} & (\forall (states: \text{PRED}[\text{State}], waddr: \text{Address}, s: \text{State}): \\ & \quad \text{transformer_invariant?}(states, \\ & \qquad \qquad \qquad \text{memory_write_transformers}(pm', \\ & \qquad \qquad \qquad \qquad \qquad \qquad \text{address_block}(waddr, \\ & \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{length}(cons2_var))) \\ & \quad \wedge \text{states}(s) \\ & \quad \supset \\ & \quad \text{result_pred}(states) \\ & \qquad \qquad \qquad (\text{expr_2_super}(\text{memory_write_list_nse}(pm')(waddr, cons2_var))(s))) \\ & \quad \supset \\ & \quad (\forall (states: \text{PRED}[\text{State}], waddr: \text{Address}, s: \text{State}): \\ & \quad \quad \text{transformer_invariant?}(states, \\ & \quad \qquad \qquad \text{memory_write_transformers}(pm', \\ & \quad \quad \quad \text{ad-} \\ & \quad \text{dress_block}(waddr, \\ & \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{length} \\ & \quad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{(cons} \\ & \quad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{(cons1_var} \\ & \quad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{cons2_var} \\ & \quad \quad \wedge \text{states}(s) \\ & \quad \quad \supset \\ & \quad \quad \text{result_pred}(states) \\ & \quad \qquad \qquad (\text{expr_2_super}(\text{memory_write_list_nse}(pm') \\ & \quad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{(waddr, cons(cons1_var, cons2_var))} \\ & \quad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \qquad \text{(s)))) \end{aligned}$$

Repeatedly Skolemizing and flattening,

Expanding the definition of memory_write_list_nse,

Installing automatic rewrites from: length super_comp_expr_forget_expr! address_block

Using lemma memory_write_transformers_memory_write[State],

Simplifying, rewriting, and recording with decision procedures,

Case splitting on OK?(expr_2_super(memory_write(pm!1)(waddr!1, cons1_var!1))(s!1)),

we get 2 subgoals:

transformer_invariant_write_list_nse.2.1:

{-1}	OK?(expr_2_super(memory_write(pm')(waddr', cons1_var'))(s'))		
{-2}	memory_write_transformers(pm', address_block(waddr', 1 + length(cons2_var')) (expr_2_super(memory_write(pm')(waddr', cons1_var'))))		
{-3}	\forall (states: PRED[State], waddr: Address, s: State): transformer_invariant?(states, memory_write_transformers(pm', address_block(waddr, length(cons2_var')))) \wedge states(s) \supset result_pred(states) (expr_2_super(memory_write_list_nse(pm')(waddr, cons2_var'))(s))		
{-4}	transformer_invariant?(states', memory_write_transformers(pm', address_block(waddr', 1 + length(cons2_var'))))		
{-5}	states'(s')		
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding-right: 10px; vertical-align: top;">{1}</td> <td style="padding-left: 10px;">result_pred(states') (CASES expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') OF OK(state): expr_2_super(memory_write_list_nse(pm')(waddr' + 1, cons2_var')) (state) ELSE expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') ENDCASES)</td> </tr> </table>		{1}	result_pred(states') (CASES expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') OF OK(state): expr_2_super(memory_write_list_nse(pm')(waddr' + 1, cons2_var')) (state) ELSE expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') ENDCASES)
{1}	result_pred(states') (CASES expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') OF OK(state): expr_2_super(memory_write_list_nse(pm')(waddr' + 1, cons2_var')) (state) ELSE expr_2_super(memory_write(pm')(waddr', cons1_var'))(s') ENDCASES)		

Simplifying, rewriting, and recording with decision procedures,

Rewriting using -3, matching in *,

we get 2 subgoals:

C Proof scripts

transformer_invariant_write_list_nse.2.1.1:

<div style="display: flex; flex-direction: column; gap: 5px;"> <div style="display: flex; align-items: flex-start;"> {-1} $OK?(expr_2_super(memory_write(pm')(waddr', cons1_var'))(s'))$ </div> <div style="display: flex; align-items: flex-start;"> {-2} $memory_write_transformers(pm', address_block(waddr', 1 + length(cons2_var'))$ $(expr_2_super(memory_write(pm')(waddr', cons1_var')))$ </div> <div style="display: flex; align-items: flex-start;"> {-3} $\forall (states: PRED[State], waddr: Address, s: State):$ $transformer_invariant?(states,$ $memory_write_transformers(pm',$ $address_block(waddr,$ $length(cons2_var'))$ $\wedge states(s)$ \supset $result_pred(states)$ $(expr_2_super(memory_write_list_nse(pm')(waddr, cons2_var'))(s))$ </div> <div style="display: flex; align-items: flex-start;"> {-4} $transformer_invariant?(states',$ $memory_write_transformers(pm',$ $address_block(waddr',$ $1 + length(cons2_va$ </div> <div style="display: flex; align-items: flex-start;"> {-5} $states'(s')$ </div> </div> <hr style="border: 0.5px solid black; margin: 5px 0;"/> <div style="display: flex; flex-direction: column; gap: 5px;"> <div style="display: flex; align-items: flex-start;"> {1} $transformer_invariant?(states',$ $memory_write_transformers(pm',$ $address_block(waddr' + 1,$ $length(cons2_var'))$ </div> <div style="display: flex; align-items: flex-start;"> {2} $result_pred(states')$ $(expr_2_super(memory_write_list_nse(pm')(waddr' + 1, cons2_var'))$ $(state(expr_2_super(memory_write(pm')(waddr', cons1_var'))$ $(s'))))$ </div> </div>

$$\quad \supset \text{OK?}[\text{State}, \text{list}[\text{Byte}]](\text{memory_read_list_nse}[\text{State}](pm)(\text{raddr}, \text{size})(s))$$

Repeatedly Skolemizing and flattening,

Using lemma memory_read_list_nse_ok,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of memory_read_list_nse_next_length_TCC2.

Q.E.D.

C.123.12 Memory_Change_2.memory_read_list_nse_next_length

Terse proof for memory_read_list_nse_next_length.

memory_read_list_nse_next_length:

```
{1}  ∀ (pm: Memory_struct[State], states: PRED[State], raddr: Address, size: nat, s: State):
      transformer_invariant?(states, memory_read_transformers(pm, address_block(raddr, size))) ∧
      transformers_ok?(states, memory_read_transformers(pm, address_block(raddr, size))) ∧
      states(s)
      ⊃
      states(state(memory_read_list_nse(pm)(raddr, size)(s))) ∧
      length(data(memory_read_list_nse(pm)(raddr, size)(s))) = size
```

For the top quantifier in 1, we introduce Skolem constants: (pm' states' _ _ _),

Inducting on size on formula 1,

we get 4 subgoals:

memory_read_list_nse_next_length.1:

```
{1}  ∀ (raddr: Address, s: State):
      transformer_invariant?(states', memory_read_transformers(pm', address_block(raddr, 0)))
      ∧
      transformers_ok?(states', memory_read_transformers(pm', address_block(raddr, 0))) ∧
      states'(s)
      ⊃
      states'(state(memory_read_list_nse(pm')(raddr, 0)(s))) ∧
      length(data(memory_read_list_nse(pm')(raddr, 0)(s))) = 0
```

Expanding the definition of memory_read_list_nse,

Repeatedly Skolemizing and flattening,

Expanding the definition of ok_result,

Expanding the definition of length,

which is trivially true.

This completes the proof of memory_read_list_nse_next_length.1.

memory_read_list_nse_next_length.2:

$$\begin{array}{l}
 \{1\} \quad \forall j: \\
 \quad (\forall (\text{raddr}: \text{Address}, s: \text{State}): \\
 \quad \quad \text{transformer_invariant?}(\text{states}', \\
 \quad \quad \quad \text{memory_read_transformers}(\text{pm}', \text{ad-} \\
 \quad \quad \text{dress_block}(\text{raddr}, j))) \\
 \quad \quad \wedge \\
 \quad \quad \text{transformers_ok?}(\text{states}', \text{memory_read_transformers}(\text{pm}', \text{ad-} \\
 \quad \quad \text{dress_block}(\text{raddr}, j))) \\
 \quad \quad \wedge \text{states}'(s) \\
 \quad \quad \supset \\

This completes the proof of unchanged_memory_read_list_nse_TCC3.

Q.E.D.

C.123.19 Memory_Change_2.unchanged_memory_read_list_nse

Terse proof for unchanged_memory_read_list_nse.

unchanged_memory_read_list_nse:

$$\{1\} \quad \forall (\text{addresses: PRED}[\text{Address}], \text{pm: Memory_struct}[\text{State}], \text{states: PRED}[\text{State}], \text{raddr: Address}, \\ \text{size: nat}, \text{s: State}, \text{q: } [\text{State} \rightarrow \text{SuperResult}[\text{State}]]) : \\ \text{unchanged_memory_invariant?}(\text{pm}, \text{states}, \\ \text{(memory_read_transformers}(\text{pm}, \text{address_block}(\text{raddr}, \text{size})) \cup \text{singleton}(\text{addresses})) \\ \wedge \\ \text{transformers_ok?}(\text{states}, \text{memory_read_transformers}(\text{pm}, \text{address_block}(\text{raddr}, \text{size}))) \wedge \\ \text{(address_block}(\text{raddr}, \text{size}) \subseteq \text{addresses}) \wedge \text{states}(\text{s}) \wedge \text{OK?}(\text{q}(\text{s})) \\ \supset \\ \text{data}(\text{memory_read_list_nse}(\text{pm})(\text{raddr}, \text{size})(\text{state}(\text{q}(\text{s})))) = \\ \text{data}(\text{memory_read_list_nse}(\text{pm})(\text{raddr}, \text{size})(\text{s}))$$

For the top quantifier in 1, we introduce Skolem constants: (addresses' pm' states' _ _ _ _),

Inducting on size on formula 1,

we get 5 subgoals:

unchanged_memory_read_list_nse.1:

$$\begin{array}{l}
 \{1\} \quad \forall (raddr: \text{Address}, s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]) : \\
 \quad \text{unchanged_memory_invariant?}(pm', \text{states}', \\
 \quad \quad \quad (\text{memory_read_transformers}(pm', \text{address_block}(raddr, 0)) \cup s \\
 \quad \quad \quad \text{addresses}')) \\
 \quad \wedge \\
 \quad \text{transformers_ok?}(\text{states}', \text{memory_read_transformers}(pm', \text{ad-} \\
 \quad \text{dress_block}(raddr, 0))) \wedge \\
 \quad (\text{address_block}(raddr, 0) \subseteq \text{addresses}') \wedge \text{states}'(s) \wedge \text{OK?}(q(s)) \\
 \quad \supset \\
 \quad \text{data}(\text{memory_read_list_nse}(pm')(raddr, 0)(\text{state}(q(s)))) = \\
 \quad \text{data}(\text{memory_read_list_nse}(pm')(raddr, 0)(s))
 \end{array}$$

Expanding the definition of memory_read_list_nse,

Expanding the definition of ok_result,

which is trivially true.

This completes the proof of unchanged_memory_read_list_nse.1.

unchanged_memory_read_list_nse.2:

$$\begin{array}{l}
 \{1\} \quad \forall j : \\
 \quad (\forall (raddr: \text{Address}, s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]) : \\
 \quad \quad \text{unchanged_memory_invariant?}(pm', \text{states}', \\

Q.E.D.

C.123.28 Memory_Change_2.memory_write_list_ok_nse

Terse proof for memory_write_list_ok_nse.

memory_write_list_ok_nse:

```

{1}  ∃ (pm: Memory_struct[State], states: PRED[State], waddr: Address, s: State,
      bl: list[Byte]):
      transformer_invariant?(states,
                              memory_write_transformers(pm, ad-
dress_block(waddr, length(bl))))
      ∧
      transformers_ok?(states,
                      memory_write_transformers(pm, ad-
dress_block(waddr, length(bl))))
      ∧ states(s)
      ⊃ OK?(memory_write_list_nse(pm)(waddr, bl)(s))

```

For the top quantifier in 1, we introduce Skolem constants: (pm' states'),

Inducting on bl on formula 1,

we get 2 subgoals:

`memory_write_list_ok_nse.1:`

$\{1\} \quad \forall (waddr: \text{Address}, s: \text{State}):$ $\quad \text{transformer_invariant?}(\text{states}',$ $\quad \quad \quad \text{memory_write_transformers}(\text{pm}',$ $\quad \quad \quad \quad \quad \text{ad-}$ $\quad \text{dress_block}(waddr, \text{length}(\text{null})))$ $\quad \wedge$ $\quad \text{transformers_ok?}(\text{states}',$ $\quad \quad \quad \text{memory_write_transformers}(\text{pm}', \text{ad-}$ $\quad \text{dress_block}(waddr, \text{length}(\text{null})))$ $\quad \wedge \text{states}'(s)$ $\quad \supset \text{OK?}(\text{memory_write_list_nse}(\text{pm}')(\text{waddr}, \text{null})(s))$

Expanding the definition of `memory_write_list_nse`,

Expanding the definition of `ok_result`,

which is trivially true.

This completes the proof of `memory_write_list_ok_nse.1`.

memory_write_list_ok_nse.2:

```

{1}  ∀ (cons1_var: Byte, cons2_var: list[Byte]):
      (∀ (waddr: Address, s: State):
        transformer_invariant?(states',
                                memory_write_transformers(pm',
                                                            address_block(waddr,
                                                                           length(cons2_
                                                                    &
                                                                    transformers_ok?(states',
                                                                memory_write_transformers(pm',
                                                                    ad-
                                                                    dress_block(waddr, length(cons2_var))))
                                                                    & states'(s))
                                                                    ⊃ OK?(memory_write_list_nse(pm')(waddr, cons2_var)(s)))
                                                                    ⊃
                                                                    (∀ (waddr: Address, s: State):
                                                                      transformer_invariant?(states',

Forward chaining on `unchanged_memory_invariant_invariant`,
This completes the proof of `unchanged_memory_read_list_write_list_nse_TCC2.2`.
Q.E.D.

C.123.41 Memory_Change_2.unchanged_memory_read_list_write_list_nse

Terse proof for `unchanged_memory_read_list_write_list_nse`.

unchanged_memory_read_list_write_list_nse:

```

{1}  ∀ (pm: Memory_struct[State], states: PRED[State], waddr: Ad-
      dress, bl: list[Byte],
      s: State):
      unchanged_memory_invariant?(pm, states,
                                  memory_read_transformers(pm,
                                                            ad-
dress_block(waddr, length(bl))),
                                  address_block(waddr, length(bl)))
      ∧
      unchanged_memory_write_invariant?(pm, states, address_block(waddr, length(bl))) ∧
      changed_memory_invariant?(pm, states, address_block(waddr, length(bl))) ∧
      transformers_ok?(states,
                       memory_read_transformers(pm, ad-
dress_block(waddr, length(bl))))
      ∧
      transformers_ok?(states,
                       memory_write_transformers(pm, ad-
dress_block(waddr, length(bl))))
      ∧ states(s)
      ⊃
      data(memory_read_list_nse(pm)(waddr, length(bl))
           (state(memory_write_list_nse(pm)(waddr, bl)(s))))
      = bl

```

For the top quantifier in 1, we introduce Skolem constants: (pm' states' — — —),

Inducting on bl on formula 1,

we get 4 subgoals:

unchanged_memory_read_list_write_list_nse.1:

```

{1}  ∀ (waddr: Address, s: State):
      unchanged_memory_invariant?(pm', states',
                                  memory_read_transformers(pm',
                                                            ad-
dress_block(waddr, length(null))),
                                  address_block(waddr, length(null)))
      ∧
      unchanged_memory_write_invariant?(pm', states', address_block(waddr, length(null))) ∧
      changed_memory_invariant?(pm', states', address_block(waddr, length(null))) ∧

{-2}	transformers_ok?(states', memory_read_transformers(pm', addresses'))
{-3}	unchanged_memory_invariant?(pm', states', transformers', addresses')
{-4}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q ₂ '(data(q ₁ '(s'))))), addresses')
{-5}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q ₁ ' ## q ₂ '(data(q ₁ '(s'))))), addresses')
{-6}	states'(s')
{-7}	q' = expr_2_super(q ₁ ' ## q ₂ ')
{-8}	addresses'(a')
{-9}	OK?(expr_2_super(q ₁ ' ## q ₂ ')(s'))
{-10}	OK?(memory_read(pm')(a')(s'))
{-11}	OK?(memory_read(pm')(a')(state((q ₁ ' ## q ₂ '(data(q ₁ '(s'))))(s'))))
{-12}	∀ (s: (states')): OK?(q ₁ '(s)) ⊃ P'(data(q ₁ '(s)))
{1}	data(memory_read(pm')(a')(state((q ₁ ' ## q ₂ '(data(q ₁ '(s'))))(s')))) = data(memory_read(pm')(a')(s'))

Using lemma expr_unchanged_memory_invariant_unchanged,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

fexpr_unchanged_memory_invariant_composition.2.1.1.1.1.1:

{-1}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q ₁ ' ## q ₂ '(data(q ₁ '(s'))))), addresses')
{-2}	states'(s')
{-3}	addresses'(a')
{-4}	OK?(memory_read(pm')(a')(s'))
{-5}	OK?(memory_read(pm')(a')(state((q ₁ ' ## q ₂ '(data(q ₁ '(s'))))(s'))))
{-6}	transformers'(expr_2_super(q ₁ '))
{-7}	transformers_ok?(states', memory_read_transformers(pm', addresses'))
{-8}	unchanged_memory_invariant?(pm', states', transformers', addresses')
{-9}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q ₂ '(data(q ₁ '(s'))))), addresses')
{-10}	q' = expr_2_super(q ₁ ' ## q ₂ ')
{-11}	OK?(expr_2_super(q ₁ ' ## q ₂ ')(s'))
{-12}	∀ (s: (states')): OK?(q ₁ '(s)) ⊃ P'(data(q ₁ '(s)))
{1}	OK?((q ₁ ' ## q ₂ '(data(q ₁ '(s'))))(s'))
{2}	data(memory_read(pm')(a')(state((q ₁ ' ## q ₂ '(data(q ₁ '(s'))))(s')))) = data(memory_read(pm')(a')(s'))

Keeping (-11 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of fexpr_unchanged_memory_invariant_composition.2.1.1.1.1.1.

fexpr_unchanged_memory_invariant_composition.2.1.1.1.1.2:

{-1}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q'_1 ## q'_2(data(q'_1(s')))), addresses')
{-2}	states'(s')
{-3}	addresses'(a')
{-4}	OK?(memory_read(pm')(a')(s'))
{-5}	OK?(memory_read(pm')(a')(state((q'_1 ## q'_2(data(q'_1(s'))))(s'))))
{-6}	transformers'(expr_2_super(q'_1))
{-7}	transformers_ok?(states', memory_read_transformers(pm', addresses')
{-8}	unchanged_memory_invariant?(pm', states', transformers', addresses')
{-9}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q'_2(data(q'_1(s')))), addresses')
{-10}	q' = expr_2_super(q'_1 ## q'_2)
{-11}	OK?(expr_2_super(q'_1 ## q'_2)(s'))
{-12}	$\forall (s: (\text{states}')): \text{OK?}(q'_1(s)) \supset P'(\text{data}(q'_1(s)))$
{1}	singleton(expr_2_super(q'_1 ## q'_2(data(q'_1(s')))) (expr_2_super((q'_1 ## q'_2(data(q'_1(s')))))))
{2}	data(memory_read(pm')(a')(state((q'_1 ## q'_2(data(q'_1(s'))))(s')))) = data(memory_read(pm')(a')(s'))

Expanding the definition of singleton,

which is trivially true.

This completes the proof of fexpr_unchanged_memory_invariant_composition.2.1.1.1.1.2.

fexpr_unchanged_memory_invariant_composition.2.1.1.1.2:

{-1}	transformers'(expr_2_super(q'_1))
{-2}	transformers_ok?(states', memory_read_transformers(pm', addresses')
{-3}	unchanged_memory_invariant?(pm', states', transformers', addresses')
{-4}	unchanged_memory_invariant?(pm', states', singleton(expr_2_super(q'_2(data(q'_1(s')))), addresses')
{-5}	states'(s')
{-6}	q' = expr_2_super(q'_1 ## q'_2)
{-7}	addresses'(a')
{-8}	OK?(expr_2_super(q'_1 ## q'_2)(s'))
{-9}	OK?(memory_read(pm')(a')(s'))
{-10}	OK?(memory_read(pm')(a')(state((q'_1 ## q'_2(data(q'_1(s'))))(s'))))
{-11}	$\forall (s: (\text{states}')): \text{OK?}(q'_1(s)) \supset P'(\text{data}(q'_1(s)))$
{1}	singleton(expr_2_super(q'_2(data(q'_1(s')))) (expr_2_super(q'_2(data(q'_1(s')))))))
{2}	data(memory_read(pm')(a')(state((q'_1 ## q'_2(data(q'_1(s'))))(s')))) = data(memory_read(pm')(a')(s'))

Expanding the definition of singleton,

which is trivially true.

This completes the proof of fexpr_unchanged_memory_invariant_composition.2.1.1.1.2.

C Proof scripts

fexpr_unchanged_memory_invariant_composition.2.1.1.2:

{-1}	states'(s')
{-2}	q' = expr_2_super(q1 ## q2)
{-3}	addresses'(a')
{-4}	OK?(expr_2_super(q1 ## q2)(s'))
{-5}	OK?(memory_read(pm')(a')(s'))

<hr/>	
{1}	$\text{has_next_state}((q'_1 \ \#\# \ q'_2)(s'))$
{2}	$\text{data}(\text{memory_read}(pm')(a')(\text{state}(\text{expr_2_super}(q'_1 \ \#\# \ q'_2)(s')))) =$ $\text{data}(\text{memory_read}(pm')(a')(s'))$

Rewriting using ok_expr_2_super, matching in *,
 Expanding the definition of has_next_state,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of fexpr_unchanged_memory_invariant_composition.2.2.
 Q.E.D.

C.126 Proofs for Memory_Physical_Memory (physical_memory.pvs)

This theory contains no provable formal statements.

C.127 Proofs for Memory_access (result.pvs)

This theory contains no provable formal statements.

C.128 Proofs for Memory_access_adt (Memory_access_adt.pvs)

This theory contains no provable formal statements.

C.129 Proofs for Memory_access_adt_reduce (Memory_access_adt.pvs)

This theory contains no provable formal statements.

C.130 Proofs for Memory_access_util (result.pvs)

This theory contains no provable formal statements.

C.131 Proofs for Memory_privilege (result.pvs)

This theory contains no provable formal statements.

C.132 Proofs for Memory_privilege_adt (Memory_privilege_adt.pvs)

This theory contains no provable formal statements.

C.133 Proofs for Memory_privilege_adt_reduce (Memory_privilege_adt.pvs)

This theory contains no provable formal statements.

C.134 Proofs for Memory_privilege_util (result.pvs)

C.134.1 Memory_privilege_util.bool_to_memory_privilege_iso

Terse proof for bool_to_memory_privilege_iso.

bool_to_memory_privilege_iso:

$$\frac{}{\{1\} \quad \forall (ar: \text{Memory_privilege}): \text{bool_to_memory_privilege}(\text{memory_privilege_to_bool}(ar)) = ar}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of bool_to_memory_privilege_iso.
Q.E.D.

C.135 Proofs for Min_Max_Extension (vfiasco-prelude.pvs)

C.135.1 Min_Max_Extension.max_stable_under_extension_TCC1

Terse proof for max_stable_under_extension_TCC1.

max_stable_under_extension_TCC1:

$$\frac{}{\{1\} \quad \forall (P: \text{non_empty_finite_set}[S]): \neg \text{empty?}[T](\text{extend}[T, S, \text{bool}, \text{FALSE}](P))}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of max_stable_under_extension_TCC1.
Q.E.D.

C.135.2 Min_Max_Extension.max_stable_under_extension

Terse proof for max_stable_under_extension.

max_stable_under_extension:

$$\frac{\{1\} \quad \forall (P: \text{non_empty_finite_set}[S]):}{\text{max}[T, \leq](\text{extend}[T, S, \text{bool}, \text{FALSE}](P)) = \text{max}[S, \text{restrict}[[T, T], [S, S], \text{boolean}](\leq)](P)}$$

Repeatedly Skolemizing and flattening,
 Rewriting using max_lem, matching in *,
 Applying propositional simplification,
 we get 2 subgoals:

max_stable_under_extension.1:

$$\frac{\{-1\} \quad \text{is_finite}[S](P')}{\begin{array}{l} \{1\} \quad \text{extend}[T, S, \text{bool}, \text{FALSE}](P')(\text{max}[S, \text{restrict}[[T, T], [S, S], \text{boolean}](\leq)](P')) \\ \{2\} \quad \text{empty?}[S](P') \end{array}}$$

Expanding the definition of extend,
 which is trivially true.
 This completes the proof of max_stable_under_extension.1.
 max_stable_under_extension.2:

$$\frac{\{-1\} \quad \text{is_finite}[S](P')}{\begin{array}{l} \{1\} \quad \forall (x: (\text{extend}[T, S, \text{bool}, \text{FALSE}](P'))): \\ \quad x \leq \text{max}[S, \text{restrict}[[T, T], [S, S], \text{boolean}](\leq)](P') \\ \{2\} \quad \text{empty?}[S](P') \end{array}}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of extend,
 Adding type constraints for max[S, restrict[[T, T], [S, S], boolean](<=)](P!1),
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Instantiating the top quantifier in -3 with the terms: (x!1),
 Expanding the definition of restrict,
 which is trivially true.
 This completes the proof of max_stable_under_extension.2.
 Q.E.D.

C.135.3 Min_Max_Extension.min_stable_under_extension

Terse proof for min_stable_under_extension.

min_stable_under_extension:

$$\frac{\{1\} \quad \forall (P: \text{non_empty_finite_set}[S]):}{\text{min}[T, \leq](\text{extend}[T, S, \text{bool}, \text{FALSE}](P)) = \text{min}[S, \text{restrict}[[T, T], [S, S], \text{boolean}](\leq)](P)}$$

Repeatedly Skolemizing and flattening,
 Rewriting using min_lem, matching in *,
 Expanding the definition of extend,
 Repeatedly Skolemizing and flattening,
 Adding type constraints for min[S, restrict[[T, T], [S, S], boolean](<=)](P!1),
 Expanding the definition of extend,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Instantiating the top quantifier in -3 with the terms: (x!1),
 Expanding the definition of restrict,
 which is trivially true.
 This completes the proof of `min_stable_under_extension`.
 Q.E.D.

C.136 Proofs for More_Divides (vfiasco-prelude.pvs)

C.136.1 More_Divides.expt_divides

Terse proof for `expt_divides`.

`expt_divides`:

$$\frac{}{\{1\} \quad \forall (m, n: \text{nat}, a: \text{posnat}): a > 1 \wedge n \leq m \supset \text{divides}(\text{expt}(a, n), \text{expt}(a, m))}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of divides,
 Instantiating the top quantifier in 1 with the terms: `expt(a', m' - n')`,
 we get 2 subgoals:

`expt_divides.1`:

$$\frac{\begin{array}{l} \{-1\} \quad m' \geq 0 \\ \{-2\} \quad n' \geq 0 \\ \{-3\} \quad a' > 0 \\ \{-4\} \quad a' > 1 \\ \{-5\} \quad n' \leq m' \end{array}}{\{1\} \quad \text{expt}(a', m') = \text{expt}(a', n') \times \text{expt}(a', m' - n')}$$

Rewriting using `expt_plus_aux`, matching in *,
 This completes the proof of `expt_divides.1`.

`expt_divides.2`:

$$\frac{\begin{array}{l} \{-1\} \quad m' \geq 0 \\ \{-2\} \quad n' \geq 0 \\ \{-3\} \quad a' > 0 \\ \{-4\} \quad a' > 1 \\ \{-5\} \quad n' \leq m' \end{array}}{\{1\} \quad m' - n' \geq 0}$$

Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `expt_divides.2`.
 Q.E.D.

C.136.2 More_Divides.divides_expt_gt

Terse proof for `divides_expt_gt`.

`divides_expt_gt`:

$$\frac{}{\{1\} \quad \forall (n, i, j: \text{nat}): j \leq i \wedge \text{divides}(\text{expt}(2, i), n) \supset \text{divides}(\text{expt}(2, j), n)}$$

Repeatedly Skolemizing and flattening,
 Applying `divides_transitive`
 Instantiating the top quantifier in -1 with the terms: `n', expt(2, i'), expt(2, j')`,

Simplifying, rewriting, and recording with decision procedures,
 Rewriting using `expt_divides`, matching in `*`,
 This completes the proof of `divides_expt_gt`.
 Q.E.D.

C.137 Proofs for More_Function (vfiasco-prelude.pvs)

C.137.1 More_Function.restrict_to_image_TCC1

Terse proof for `restrict_to_image_TCC1`.

`restrict_to_image_TCC1`:

$$\frac{\{1\} \quad \forall (f: [\text{Domain} \rightarrow \text{Range}]): \quad \forall (x_1: \text{Domain}): \text{image}[\text{Domain}, \text{Range}](f, \text{fullset}[\text{Domain}])(f(x_1))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `restrict_to_image_TCC1`.
 Q.E.D.

C.137.2 More_Function.surjective_restrict_to_image

Terse proof for `surjective_restrict_to_image`.

`surjective_restrict_to_image`:

$$\frac{\{1\} \quad \forall (f: [\text{Domain} \rightarrow \text{Range}]): \text{surjective?}(\text{restrict_to_image}(f))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `surjective_restrict_to_image`.
 Q.E.D.

C.137.3 More_Function.bijective_restrict_to_image

Terse proof for `bijective_restrict_to_image`.

`bijective_restrict_to_image`:

$$\frac{\{1\} \quad \forall (f: [\text{Domain} \rightarrow \text{Range}]): \text{injective?}(f) \supset \text{bijective?}(\text{restrict_to_image}(f))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `bijective_restrict_to_image`.
 Q.E.D.

C.138 Proofs for More_List_Props (vfiasco-prelude.pvs)

C.138.1 More_List_Props.length_is_cons

Terse proof for `length_is_cons`.

`length_is_cons`:

$$\frac{\{1\} \quad \forall (l: \text{list}[T]): \text{length}(l) > 0 \supset \text{cons?}(l)}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `length_is_cons`.
Q.E.D.

C.138.2 More_List_Props.cons_length

Terse proof for `cons_length`.

`cons_length`:

$$\{1\} \quad \forall (l: (\text{cons?}[T])): \text{length}(l) > 0$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `cons_length`.
Q.E.D.

C.138.3 More_List_Props.length_cdr_TCC1

Terse proof for `length_cdr_TCC1`.

`length_cdr_TCC1`:

$$\{1\} \quad \forall (l: \text{list}[T]): \text{length}(l) > 0 \supset \text{cons?}[T](l)$$

Repeatedly Skolemizing and flattening,
Rewriting using `length_is_cons`, matching in *,
This completes the proof of `length_cdr_TCC1`.
Q.E.D.

C.138.4 More_List_Props.length_cdr

Terse proof for `length_cdr`.

`length_cdr`:

$$\{1\} \quad \forall (l: \text{list}[T]): \text{length}(l) > 0 \supset \text{length}(\text{cdr}(l)) = \text{length}(l) - 1$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `length`,
Expanding the definition of `length`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `length_cdr`.
Q.E.D.

C.138.5 More_List_Props.conslist_induction

Terse proof for `conslist_induction`.

`conslist_induction`:

$$\{1\} \quad \forall (p: [(\text{cons?}[T]) \rightarrow \text{boolean}]):$$
$$(\forall (t: T): p(\text{cons}(t, \text{null}))) \wedge$$
$$(\forall (t: T, \text{tail}: (\text{cons?}[T])): p(\text{tail}) \supset p(\text{cons}(t, \text{tail})))$$
$$\supset (\forall (l: (\text{cons?}[T])): p(l))$$

Skolemizing and flattening,
 Inducting on l on formula 1,
 we get 3 subgoals:

conslist_induction.1:

{-1}	$\forall (t: T): p'(\text{cons}(t, \text{null}))$
{-2}	$\forall (t: T, \text{tail}: (\text{cons}?[T])): p'(\text{tail}) \supset p'(\text{cons}(t, \text{tail}))$
{1}	$\text{cons}?[T](l')$
{2}	$p'(l')$

Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of **conslist_induction.1**.

conslist_induction.2:

{-1}	$\forall (t: T): p'(\text{cons}(t, \text{null}))$
{-2}	$\forall (t: T, \text{tail}: (\text{cons}?[T])): p'(\text{tail}) \supset p'(\text{cons}(t, \text{tail}))$
{1}	$\text{FALSE} \supset p'(\text{null})$

Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of **conslist_induction.2**.

conslist_induction.3:

{-1}	$\forall (t: T): p'(\text{cons}(t, \text{null}))$
{-2}	$\forall (t: T, \text{tail}: (\text{cons}?[T])): p'(\text{tail}) \supset p'(\text{cons}(t, \text{tail}))$
{1}	$\forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):$ $(\text{cons}?[T](\text{cons2_var}) \supset p'(\text{cons2_var})) \supset \text{TRUE} \supset p'(\text{cons}(\text{cons1_var}, \text{cons2_var}))$

Repeatedly Skolemizing and flattening,
 Case splitting on $\text{cons2_var}!1 = \text{null}$,
 we get 2 subgoals:

conslist_induction.3.1:

{-1}	$\text{cons2_var}' = \text{null}$
{-2}	$\text{cons}?[T](\text{cons2_var}') \supset p'(\text{cons2_var}')$
{-3}	$\forall (t: T): p'(\text{cons}(t, \text{null}))$
{-4}	$\forall (t: T, \text{tail}: (\text{cons}?[T])): p'(\text{tail}) \supset p'(\text{cons}(t, \text{tail}))$
{1}	$p'(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$

Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of **conslist_induction.3.1**.

conslist_induction.3.2:

{-1}	$\text{cons}?[T](\text{cons2_var}') \supset p'(\text{cons2_var}')$
{-2}	$\forall (t: T): p'(\text{cons}(t, \text{null}))$
{-3}	$\forall (t: T, \text{tail}: (\text{cons}?[T])): p'(\text{tail}) \supset p'(\text{cons}(t, \text{tail}))$
{1}	$\text{cons2_var}' = \text{null}$
{2}	$p'(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$

Simplifying, rewriting, and recording with decision procedures,
 Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of **conslist_induction.3.2**.
 Q.E.D.

C.138.6 More_List_Props.head_TCC1

Terse proof for head_TCC1.

head_TCC1:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \neg n = 0 \supset \text{cons?}[T](l)}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of head_TCC1.

Q.E.D.

C.138.7 More_List_Props.head_TCC2

Terse proof for head_TCC2.

head_TCC2:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \neg n = 0 \supset n - 1 \geq 0 \wedge n - 1 \leq \text{length}[T](\text{cdr}[T](l))}$$

Repeatedly Skolemizing and flattening,

Expanding the definition of length,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of head_TCC2.

Q.E.D.

C.138.8 More_List_Props.head_TCC3

Terse proof for head_TCC3.

head_TCC3:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \neg n = 0 \supset n - 1 < n}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of head_TCC3.

Q.E.D.

C.138.9 More_List_Props.head_tail

Terse proof for head_tail.

head_tail:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{nat}): n \leq \text{length}(l) \supset \text{append}(\text{head}(l, n), \text{tail}(l, n)) = l}$$

Inducting on l on formula 1,

we get 2 subgoals:

head_tail.1:

$$\frac{}{\{1\} \quad \forall (n: \text{nat}): n \leq \text{length}(\text{null}) \supset \text{append}(\text{head}(\text{null}, n), \text{tail}(\text{null}, n)) = \text{null}}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of head_tail.1.

head_tail.2:

$\begin{array}{l} \{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\ \quad (\forall (n: \text{nat}): \\ \quad \quad n \leq \text{length}(\text{cons2_var}) \supset \\ \quad \quad \quad \text{append}(\text{head}(\text{cons2_var}, n), \text{tail}(\text{cons2_var}, n)) = \text{cons2_var}) \\ \quad \supset \\ \quad (\forall (n: \text{nat}): \\ \quad \quad n \leq \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset \\ \quad \quad \quad \text{append}(\text{head}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n), \\ \quad \quad \quad \quad \text{tail}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n)) \\ \quad \quad \quad = \text{cons}(\text{cons1_var}, \text{cons2_var})) \end{array}$
--

Repeatedly Skolemizing and flattening,

Expanding the definition of length,

Expanding the definition of head,

Expanding the definition of tail,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

head_tail.2.1:

$\begin{array}{l} \{-1\} \quad n' \geq 0 \\ \{-2\} \quad \forall (n: \text{nat}): \\ \quad \quad n \leq \text{length}(\text{cons2_var}') \supset \\ \quad \quad \quad \text{append}(\text{head}(\text{cons2_var}', n), \text{tail}(\text{cons2_var}', n)) = \text{cons2_var}' \\ \{-3\} \quad n' \leq 1 + \text{length}(\text{cons2_var}') \\ \{-4\} \quad n' = 0 \end{array}$
$\{1\} \quad \text{append}(\text{null}, \text{cons}(\text{cons1_var}', \text{cons2_var}')) = \text{cons}(\text{cons1_var}', \text{cons2_var}')$

Expanding the definition of append,

which is trivially true.

This completes the proof of head_tail.2.1.

head_tail.2.2:

$\begin{array}{l} \{-1\} \quad n' \geq 0 \\ \{-2\} \quad \forall (n: \text{nat}): \\ \quad \quad n \leq \text{length}(\text{cons2_var}') \supset \\ \quad \quad \quad \text{append}(\text{head}(\text{cons2_var}', n), \text{tail}(\text{cons2_var}', n)) = \text{cons2_var}' \\ \{-3\} \quad n' \leq 1 + \text{length}(\text{cons2_var}') \end{array}$
$\begin{array}{l} \{1\} \quad n' = 0 \\ \{2\} \quad \text{append}(\text{cons}(\text{cons1_var}', \text{head}(\text{cons2_var}', n' - 1)), \\ \quad \quad \quad \text{tail}(\text{cons2_var}', n' - 1)) \\ \quad \quad = \text{cons}(\text{cons1_var}', \text{cons2_var}') \end{array}$

Expanding the definition of append,

Rewriting using -2, matching in *,

This completes the proof of head_tail.2.2.

Q.E.D.

C.138.10 More_List_Props.length_head

Terse proof for length_head.

C Proof scripts

`length_head:`

$$\{1\} \quad \forall (l: \text{list}[T], n: \text{nat}): n \leq \text{length}(l) \supset \text{length}(\text{head}(l, n)) = n$$

Inducting on l on formula 1,

we get 2 subgoals:

`length_head.1:`

$$\{1\} \quad \forall (n: \text{nat}): n \leq \text{length}(\text{null}) \supset \text{length}(\text{head}(\text{null}, n)) = n$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `length_head.1`.

`length_head.2:`

$$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\ (\forall (n: \text{nat}): n \leq \text{length}(\text{cons2_var}) \supset \text{length}(\text{head}(\text{cons2_var}, n)) = n) \supset \\ (\forall (n: \text{nat}): \\ n \leq \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset \\ \text{length}(\text{head}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n)) = n)$$

Repeatedly Skolemizing and flattening,

Expanding the definition of `head`,

Expanding the definition of `length`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Instantiating the top quantifier in -2 with the terms: $(n!1 - 1)$,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `length_head.2`.

Q.E.D.

C.138.11 More_List_Props.length_tail

Terse proof for `length_tail`.

`length_tail:`

$$\{1\} \quad \forall (l: \text{list}[T], n: \text{nat}): \\ n \leq \text{length}(l) \supset \text{length}(\text{tail}(l, n)) = \text{length}(l) - n$$

Inducting on l on formula 1,

we get 2 subgoals:

`length_tail.1:`

$$\{1\} \quad \forall (n: \text{nat}): n \leq \text{length}(\text{null}) \supset \text{length}(\text{tail}(\text{null}, n)) = \text{length}(\text{null}) - n$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `length_tail.1`.

length_tail.2:

$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):$ $\quad (\forall (n: \text{nat}):$ $\quad \quad n \leq \text{length}(\text{cons2_var}) \supset$ $\quad \quad \text{length}(\text{tail}(\text{cons2_var}, n)) = \text{length}(\text{cons2_var}) - n$ $\quad \quad \supset$ $\quad \quad (\forall (n: \text{nat}):$ $\quad \quad \quad n \leq \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset$ $\quad \quad \quad \text{length}(\text{tail}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n)) =$ $\quad \quad \quad \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) - n$
--

Repeatedly Skolemizing and flattening,

Expanding the definition of tail,

Expanding the definition of length,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

length_tail.2.1:

$\{-1\} \quad n' \geq 0$ $\{-2\} \quad \forall (n: \text{nat}):$ $\quad n \leq \text{length}(\text{cons2_var}') \supset$ $\quad \quad \text{length}(\text{tail}(\text{cons2_var}', n)) = \text{length}(\text{cons2_var}') - n$ $\{-3\} \quad n' \leq \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$ $\{-4\} \quad \text{null}?(\text{tail}(\text{cons2_var}', n' - 1))$
$\{1\} \quad n' = 0$ $\{2\} \quad 0 = 1 + \text{length}(\text{cons2_var}') - n'$

Instantiating the top quantifier in -2 with the terms: (n!1 - 1),

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of length_tail.2.1.

length_tail.2.2:

$\{-1\} \quad n' \geq 0$ $\{-2\} \quad \forall (n: \text{nat}):$ $\quad n \leq \text{length}(\text{cons2_var}') \supset$ $\quad \quad \text{length}(\text{tail}(\text{cons2_var}', n)) = \text{length}(\text{cons2_var}') - n$ $\{-3\} \quad n' \leq \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$
$\{1\} \quad n' = 0$ $\{2\} \quad \text{null}?(\text{tail}(\text{cons2_var}', n' - 1))$ $\{3\} \quad \text{length}(\text{cdr}(\text{tail}(\text{cons2_var}', n' - 1))) = \text{length}(\text{cons2_var}') - n'$

Instantiating the top quantifier in -2 with the terms: (n!1 - 1),

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of length_tail.2.2.

Q.E.D.

C.138.12 More_List_Props.nth_head_TCC1

Terse proof for nth_head_TCC1.

nth_head_TCC1:

$\{1\} \quad \forall (l: \text{list}[T], n, i: \text{nat}):$ $\quad n \leq \text{length}(l) \wedge i < n \supset i < \text{length}[T](\text{head}(l, n))$

Repeatedly Skolemizing and flattening,
 Rewriting using `length_head`, matching in `*`,
 This completes the proof of `nth_head_TCC1`.
 Q.E.D.

C.138.13 More_List_Props.nth_head_TCC2

Terse proof for `nth_head_TCC2`.

`nth_head_TCC2`:

$$\frac{\{1\} \quad \forall (l: \text{list}[T], n, i: \text{nat}): n \leq \text{length}(l) \wedge i < n \supset i < \text{length}[T](l)}{\quad}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `nth_head_TCC2`.
 Q.E.D.

C.138.14 More_List_Props.nth_head

Terse proof for `nth_head`.

`nth_head`:

$$\frac{\{1\} \quad \forall (l: \text{list}[T], n, i: \text{nat}): n \leq \text{length}(l) \wedge i < n \supset \text{nth}(\text{head}(l, n), i) = \text{nth}(l, i)}{\quad}$$

Inducting on n on formula 1,
 we get 4 subgoals:

`nth_head.1`:

$$\frac{\{1\} \quad \forall (l: \text{list}[T], i: \text{nat}): 0 \leq \text{length}(l) \wedge i < 0 \supset \text{nth}(\text{head}(l, 0), i) = \text{nth}(l, i)}{\quad}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `nth_head.1`.

`nth_head.2`:

$$\frac{\{1\} \quad \forall j: (\forall (l: \text{list}[T], i: \text{nat}): j \leq \text{length}(l) \wedge i < j \supset \text{nth}(\text{head}(l, j), i) = \text{nth}(l, i)) \supset (\forall (l: \text{list}[T], i: \text{nat}): j + 1 \leq \text{length}(l) \wedge i < j + 1 \supset \text{nth}(\text{head}(l, j + 1), i) = \text{nth}(l, i))}{\quad}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of `head`,
 Expanding the definition of `nth`,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Rewriting using `-3`, matching in `*`,
 Rewriting using `length_cdr`, matching in `*`,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `nth_head.2`.

`nth_head.3:`

{1}	$\forall (n: \text{nat}, l: \text{list}[T], i: \text{nat}): n \leq \text{length}(l) \wedge i < n \supset i < \text{length}[T](l)$
{2}	$\forall (l: \text{list}[T], i: \text{nat}):$ $n' \leq \text{length}(l) \wedge i < n' \supset \text{nth}(\text{head}(l, n'), i) = \text{nth}(l, i)$

Hiding formulas: 2,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `nth_head.3`.

`nth_head.4:`

{1}	$\forall (n: \text{nat}, l: \text{list}[T], i: \text{nat}):$ $n \leq \text{length}(l) \wedge i < n \supset i < \text{length}[T](\text{head}(l, n))$
{2}	$\forall (l: \text{list}[T], i: \text{nat}):$ $n' \leq \text{length}(l) \wedge i < n' \supset \text{nth}(\text{head}(l, n'), i) = \text{nth}(l, i)$

Hiding formulas: 2,

Repeatedly Skolemizing and flattening,

Rewriting using `length_head`, matching in *,

This completes the proof of `nth_head.4`.

Q.E.D.

C.138.15 More_List_Props.nth_tail_TCC1

Terse proof for `nth_tail_TCC1`.

`nth_tail_TCC1:`

{1}	$\forall (l: \text{list}[T], n, i: \text{nat}):$ $n \leq \text{length}(l) \wedge i + n < \text{length}(l) \supset i < \text{length}[T](\text{tail}(l, n))$
-----	---

Repeatedly Skolemizing and flattening,

Rewriting using `length_tail`, matching in *,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `nth_tail_TCC1`.

Q.E.D.

C.138.16 More_List_Props.nth_tail_TCC2

Terse proof for `nth_tail_TCC2`.

`nth_tail_TCC2:`

{1}	$\forall (l: \text{list}[T], n, i: \text{nat}):$ $n \leq \text{length}(l) \wedge i + n < \text{length}(l) \supset n + i < \text{length}[T](l)$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `nth_tail_TCC2`.

Q.E.D.

C.138.17 More_List_Props.nth_tail

Terse proof for `nth_tail`.

C Proof scripts

`nth_tail:`

{1} $\forall (l: \text{list}[T], n, i: \text{nat}):$
 $n \leq \text{length}(l) \wedge i + n < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, n), i) = \text{nth}(l, n + i)$

Inducting on n on formula 1,

we get 4 subgoals:

`nth_tail.1:`

{1} $\forall (l: \text{list}[T], i: \text{nat}):$
 $0 \leq \text{length}(l) \wedge i + 0 < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, 0), i) = \text{nth}(l, 0 + i)$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `nth_tail.1`.

`nth_tail.2:`

{1} $\forall j:$
 $(\forall (l: \text{list}[T], i: \text{nat}):$
 $j \leq \text{length}(l) \wedge i + j < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, j), i) = \text{nth}(l, j + i))$
 \supset
 $(\forall (l: \text{list}[T], i: \text{nat}):$
 $j + 1 \leq \text{length}(l) \wedge i + j + 1 < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, j + 1), i) = \text{nth}(l, j + 1 + i))$

Repeatedly Skolemizing and flattening,

Expanding the definition of tail,

Expanding the definition of nth,

Installing automatic rewrites from: -3 length_cdr

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `nth_tail.2`.

`nth_tail.3:`

{1} $\forall (n: \text{nat}, l: \text{list}[T], i: \text{nat}):$
 $n \leq \text{length}(l) \wedge i + n < \text{length}(l) \supset i + n < \text{length}[T](l)$
 {2} $\forall (l: \text{list}[T], i: \text{nat}):$
 $n' \leq \text{length}(l) \wedge i + n' < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, n'), i) = \text{nth}(l, n' + i)$

Hiding formulas: 2,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `nth_tail.3`.

`nth_tail.4:`

{1} $\forall (n: \text{nat}, l: \text{list}[T], i: \text{nat}):$
 $n \leq \text{length}(l) \wedge i + n < \text{length}(l) \supset i < \text{length}[T](\text{tail}(l, n))$
 {2} $\forall (l: \text{list}[T], i: \text{nat}):$
 $n' \leq \text{length}(l) \wedge i + n' < \text{length}(l) \supset$
 $\text{nth}(\text{tail}(l, n'), i) = \text{nth}(l, n' + i)$

Hiding formulas: 2,
 Repeatedly Skolemizing and flattening,
 Rewriting using length_tail, matching in *,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of nth_tail.4.
 Q.E.D.

C.138.18 More_List_Props.car_head_TCC1

Terse proof for car_head_TCC1.

car_head_TCC1:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): n > 0 \supset \text{cons?}[T](\text{head}(l, n))}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of head,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of car_head_TCC1.
 Q.E.D.

C.138.19 More_List_Props.car_head_TCC2

Terse proof for car_head_TCC2.

car_head_TCC2:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): n > 0 \supset \text{cons?}[T](l)}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of length,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of car_head_TCC2.
 Q.E.D.

C.138.20 More_List_Props.car_head

Terse proof for car_head.

car_head:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}(l))): n > 0 \supset \text{car}(\text{head}(l, n)) = \text{car}(l)}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of car_head.
 Q.E.D.

C.138.21 More_List_Props.cons_tail

Terse proof for cons_tail.

cons_tail:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}(l))): n < \text{length}(l) \supset \text{cons?}(\text{tail}(l, n))}$$

C Proof scripts

Repeatedly Skolemizing and flattening,
Using lemma length_tail,
Simplifying, rewriting, and recording with decision procedures,
Expanding the definition of length,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of cons_tail.
Q.E.D.

C.138.22 More_List_Props.car_tail_TCC1

Terse proof for car_tail_TCC1.

car_tail_TCC1:

$$\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \\ n < \text{length}(l) \supset \text{cons?}[T](\text{tail}(l, n))$$

Repeatedly Skolemizing and flattening,
Using lemma length_tail,
Simplifying, rewriting, and recording with decision procedures,
Expanding the definition of length,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of car_tail_TCC1.
Q.E.D.

C.138.23 More_List_Props.car_tail

Terse proof for car_tail.

car_tail:

$$\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}(l))): \\ n < \text{length}(l) \supset \text{car}(\text{tail}(l, n)) = \text{nth}(l, n)$$

Inducting on l on formula 1,
we get 3 subgoals:

car_tail.1:

$$\{1\} \quad \forall (n: \text{upto}(\text{length}(\text{null}))) : \\ n < \text{length}(\text{null}) \supset \text{car}(\text{tail}(\text{null}, n)) = \text{nth}(\text{null}, n)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of car_tail.1.

car_tail.2:

$$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\ (\forall (n: \text{upto}(\text{length}(\text{cons2_var}))) : \\ n < \text{length}(\text{cons2_var}) \supset \text{car}(\text{tail}(\text{cons2_var}, n)) = \text{nth}(\text{cons2_var}, n)) \\ \supset \\ (\forall (n: \text{upto}(\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})))) : \\ n < \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset \\ \text{car}(\text{tail}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n)) = \text{nth}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of tail,
 Expanding the definition of nth,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Rewriting using -2, matching in *,
 Expanding the definition of length,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `car_tail.2`.

`car_tail.3`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \\ \quad \quad n < \text{length}(l) \supset \text{cons?}[T](\text{tail}(l, n)) \\ \{2\} \quad \forall (n: \text{upto}(\text{length}(l'))): n < \text{length}(l') \supset \text{car}(\text{tail}(l', n)) = \text{nth}(l', n) \end{array}$$

Hiding formulas: 2,
 Repeatedly Skolemizing and flattening,
 Using lemma `length_tail`,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `car_tail.3`.
 Q.E.D.

C.138.24 More_List_Props.cdr_tail_TCC1

Terse proof for `cdr_tail_TCC1`.

`cdr_tail_TCC1`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))): \\ \quad \quad n < \text{length}(l) \supset n + 1 \leq \text{length}[T](l) \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `cdr_tail_TCC1`.
 Q.E.D.

C.138.25 More_List_Props.cdr_tail

Terse proof for `cdr_tail`.

`cdr_tail`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}(l))): \\ \quad \quad n < \text{length}(l) \supset \text{cdr}(\text{tail}(l, n)) = \text{tail}(l, n + 1) \end{array}$$

Inducting on l on formula 1,
 we get 4 subgoals:

`cdr_tail.1`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (n: \text{upto}(\text{length}(\text{null}))) : \\ \quad \quad n < \text{length}(\text{null}) \supset \text{cdr}(\text{tail}(\text{null}, n)) = \text{tail}(\text{null}, n + 1) \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `cdr_tail.1`.

cdr_tail.2:

$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):$ $(\forall (n: \text{upto}(\text{length}(\text{cons2_var}))):$ $n < \text{length}(\text{cons2_var}) \supset$ $\text{cdr}(\text{tail}(\text{cons2_var}, n)) = \text{tail}(\text{cons2_var}, n + 1))$ \supset $(\forall (n: \text{upto}(\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})))):$ $n < \text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset$ $\text{cdr}(\text{tail}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n)) =$ $\text{tail}(\text{cons}(\text{cons1_var}, \text{cons2_var}), n + 1))$
--

Repeatedly Skolemizing and flattening,

Expanding the definition of tail,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

cdr_tail.2.1:

$\{-1\} \quad n' \leq \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$ $\{-2\} \quad \forall (n: \text{upto}(\text{length}(\text{cons2_var}'))):$ $n < \text{length}(\text{cons2_var}') \supset$ $\text{cdr}(\text{tail}(\text{cons2_var}', n)) = \text{tail}(\text{cons2_var}', 1 + n)$ $\{-3\} \quad n' < \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$ $\{-4\} \quad n' = 0$
$\{1\} \quad \text{cons2_var}' = \text{tail}(\text{cons2_var}', n')$

Expanding the definition of tail,

which is trivially true.

This completes the proof of cdr_tail.2.1.

cdr_tail.2.2:

$\{-1\} \quad n' \leq \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$ $\{-2\} \quad \forall (n: \text{upto}(\text{length}(\text{cons2_var}'))):$ $n < \text{length}(\text{cons2_var}') \supset$ $\text{cdr}(\text{tail}(\text{cons2_var}', n)) = \text{tail}(\text{cons2_var}', 1 + n)$ $\{-3\} \quad n' < \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$
$\{1\} \quad n' = 0$ $\{2\} \quad \text{cdr}(\text{tail}(\text{cons2_var}', n' - 1)) = \text{tail}(\text{cons2_var}', n')$

Rewriting using -2, matching in *,

Expanding the definition of length,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of cdr_tail.2.2.

cdr_tail.3:

$\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))):$ $n < \text{length}(l) \supset 1 + n \leq \text{length}[T](l)$ $\{2\} \quad \forall (n: \text{upto}(\text{length}(l'))):$ $n < \text{length}(l') \supset \text{cdr}(\text{tail}(l', n)) = \text{tail}(l', n + 1)$
--

Hiding formulas: 2,

Repeatedly Skolemizing and flattening,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of cdr_tail.3.

cdr_tail.4:

$\{1\} \quad \forall (l: \text{list}[T], n: \text{upto}(\text{length}[T](l))):$ $n < \text{length}(l) \supset \text{cons?}[T](\text{tail}(l, n))$ $\{2\} \quad \forall (n: \text{upto}(\text{length}(l'))):$ $n < \text{length}(l') \supset \text{cdr}(\text{tail}(l', n)) = \text{tail}(l', n + 1)$
--

Hiding formulas: 2,

Repeatedly Skolemizing and flattening,

Rewriting using cons_tail, matching in *,

This completes the proof of cdr_tail.4.

Q.E.D.

C.138.26 More_List_Props.every_implied

Terse proof for every_implied.

every_implied:

$\{1\} \quad \forall (l: \text{list}[T], P, Q: \text{PRED}[T]):$ $(\forall (t: T): P(t) \supset Q(t)) \wedge \text{every}(P)(l) \supset \text{every}(Q)(l)$

Inducting on l on formula 1,

we get 2 subgoals:

every_implied.1:

$\{1\} \quad \forall (P, Q: \text{PRED}[T]):$ $(\forall (t: T): P(t) \supset Q(t)) \wedge \text{every}(P)(\text{null}) \supset \text{every}(Q)(\text{null})$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of every_implied.1.

every_implied.2:

$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):$ $(\forall (P, Q: \text{PRED}[T]):$ $(\forall (t: T): P(t) \supset Q(t)) \wedge \text{every}(P)(\text{cons2_var}) \supset$ $\text{every}(Q)(\text{cons2_var}))$ \supset $(\forall (P, Q: \text{PRED}[T]):$ $(\forall (t: T): P(t) \supset Q(t)) \wedge \text{every}(P)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset$ $\text{every}(Q)(\text{cons}(\text{cons1_var}, \text{cons2_var})))$
--

Repeatedly Skolemizing and flattening,

Expanding the definition of every,

Instantiating the top quantifier in -1 with the terms: (P!1 Q!1),

Replacing using formula -2,

Instantiating quantified variables,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of every_implied.2.

Q.E.D.

C.138.27 More_List_Props.every_conjunct_left

Terse proof for every_conjunct_left.

every_conjunct_left:

$$\frac{\{1\} \quad \forall (l: \text{list}[T], P, Q: \text{PRED}[T]):}{\text{every}(P)(l) \wedge \text{every}(Q)(l) \supset \text{every}(\lambda (t: T): P(t) \wedge Q(t))(l)}$$

Inducting on l on formula 1,

we get 2 subgoals:

every_conjunct_left.1:

$$\frac{\{1\} \quad \forall (P, Q: \text{PRED}[T]):}{\text{every}(P)(\text{null}) \wedge \text{every}(Q)(\text{null}) \supset \text{every}(\lambda (t: T): P(t) \wedge Q(t))(\text{null})}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of every_conjunct_left.1.

every_conjunct_left.2:

$$\frac{\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):}{\begin{array}{l} (\forall (P, Q: \text{PRED}[T]): \\ \text{every}(P)(\text{cons2_var}) \wedge \text{every}(Q)(\text{cons2_var}) \supset \\ \text{every}(\lambda (t: T): P(t) \wedge Q(t))(\text{cons2_var})) \\ \supset \\ (\forall (P, Q: \text{PRED}[T]): \\ \text{every}(P)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \wedge \text{every}(Q)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \\ \supset \text{every}(\lambda (t: T): P(t) \wedge Q(t))(\text{cons}(\text{cons1_var}, \text{cons2_var}))) \end{array}}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of every_conjunct_left.2.

Q.E.D.

C.138.28 More_List_Props.every_iff_forall

Terse proof for every_iff_forall.

every_iff_forall:

$$\frac{\{1\} \quad \forall (l: \text{list}[T], P: \text{PRED}[T]):}{\text{every}(P)(l) \equiv (\forall (t: T): \text{member}(t, l) \supset P(t))}$$

Inducting on l on formula 1,

we get 2 subgoals:

every_iff_forall.1:

$$\frac{\{1\} \quad \forall (P: \text{PRED}[T]):}{\text{every}(P)(\text{null}) \equiv (\forall (t: T): \text{member}(t, \text{null}) \supset P(t))}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of every_iff_forall.1.

`every_iff_forall.2:`

$$\begin{array}{|l}
 \hline
 \{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\
 \quad (\forall (P: \text{PRED}[T]): \\
 \quad \quad \text{every}(P)(\text{cons2_var}) \equiv (\forall (t: T): \text{member}(t, \text{cons2_var}) \supset P(t))) \\
 \quad \supset \\
 \quad (\forall (P: \text{PRED}[T]): \\
 \quad \quad \text{every}(P)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \equiv \\
 \quad \quad (\forall (t: T): \text{member}(t, \text{cons}(\text{cons1_var}, \text{cons2_var})) \supset P(t))) \\
 \hline
 \end{array}$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Expanding the definition of every,

Expanding the definition of member,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

`every_iff_forall.2.1:`

$$\begin{array}{|l}
 \{ -1 \} \quad \text{every}(P')(\text{cons2_var}') \\
 \{ -2 \} \quad \forall (t: T): \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \{ -3 \} \quad P'(\text{cons1_var}') \\
 \hline
 \{1\} \quad \forall (t: T): t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \hline
 \end{array}$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `every_iff_forall.2.1`.

`every_iff_forall.2.2:`

$$\begin{array}{|l}
 \{ -1 \} \quad \text{every}(P')(\text{cons2_var}') \\
 \{ -2 \} \quad \forall (t: T): \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \{ -3 \} \quad \forall (t: T): t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \hline
 \{1\} \quad P'(\text{cons1_var}') \\
 \hline
 \end{array}$$

Instantiating quantified variables,

This completes the proof of `every_iff_forall.2.2`.

`every_iff_forall.2.3:`

$$\begin{array}{|l}
 \{ -1 \} \quad \forall (t: T): t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \hline
 \{1\} \quad \text{every}(P')(\text{cons2_var}') \\
 \{2\} \quad \forall (t: T): \text{member}(t, \text{cons2_var}') \supset P'(t) \\
 \hline
 \end{array}$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `every_iff_forall.2.3`.

Q.E.D.

C.138.29 More_List_Props.some_iff_exists

Terse proof for `some_iff_exists`.

C Proof scripts

`some_iff_exists:`

$$\frac{\{1\} \quad \forall (l: \text{list}[T], P: \text{PRED}[T]): \text{some}(P)(l) \equiv (\exists (t: T): \text{member}(t, l) \wedge P(t))}{}$$

Inducting on l on formula 1,

we get 2 subgoals:

`some_iff_exists.1:`

$$\frac{\{1\} \quad \forall (P: \text{PRED}[T]): \text{some}(P)(\text{null}) \equiv (\exists (t: T): \text{member}(t, \text{null}) \wedge P(t))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `some_iff_exists.1`.

`some_iff_exists.2:`

$$\frac{\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \begin{array}{l} (\forall (P: \text{PRED}[T]): \\ \text{some}(P)(\text{cons2_var}) \equiv (\exists (t: T): \text{member}(t, \text{cons2_var}) \wedge P(t))) \\ \supset \\ (\forall (P: \text{PRED}[T]): \\ \text{some}(P)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \equiv \\ (\exists (t: T): \text{member}(t, \text{cons}(\text{cons1_var}, \text{cons2_var})) \wedge P(t))) \end{array}}{}$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Expanding the definition of `some`,

Expanding the definition of `member`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

`some_iff_exists.2.1:`

$$\frac{\begin{array}{l} \{-1\} \quad \text{some}(P')(\text{cons2_var}') \\ \{-2\} \quad \exists (t: T): \text{member}(t, \text{cons2_var}') \wedge P'(t) \end{array}}{\{1\} \quad \exists (t: T): (t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}')) \wedge P'(t)}$$

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: (t!1),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `some_iff_exists.2.1`.

`some_iff_exists.2.2:`

$$\frac{\begin{array}{l} \{-1\} \quad P'(\text{cons1_var}') \\ \{1\} \quad \text{some}(P')(\text{cons2_var}') \\ \{2\} \quad \exists (t: T): \text{member}(t, \text{cons2_var}') \wedge P'(t) \\ \{3\} \quad \exists (t: T): (t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}')) \wedge P'(t) \end{array}}{}$$

Instantiating the top quantifier in 3 with the terms: (cons1_var!1),

which is trivially true.

This completes the proof of `some_iff_exists.2.2`.

`some_iff_exists.2.3:`

$$\frac{\begin{array}{l} \{-1\} \quad \exists (t: T): (t = \text{cons1_var}' \vee \text{member}(t, \text{cons2_var}')) \wedge P'(t) \\ \{1\} \quad \text{some}(P')(\text{cons2_var}') \\ \{2\} \quad \exists (t: T): \text{member}(t, \text{cons2_var}') \wedge P'(t) \\ \{3\} \quad P'(\text{cons1_var}') \end{array}}{}$$

Repeatedly Skolemizing and flattening,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `some_iff_exists.2.3`.
 Q.E.D.

C.138.30 More_List_Props.list_extensionality_TCC1

Terse proof for `list_extensionality_TCC1`.

`list_extensionality_TCC1`:

$$\frac{\{1\} \quad \forall (l_1, l_2: \text{list}[T]): \quad \text{length}(l_1) = \text{length}(l_2) \supset (\forall (i: \text{below}(\text{length}[T](l_1))): i < \text{length}[T](l_2))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `list_extensionality_TCC1`.
 Q.E.D.

C.138.31 More_List_Props.list_extensionality

Terse proof for `list_extensionality`.

`list_extensionality`:

$$\frac{\{1\} \quad \forall (l_1, l_2: \text{list}[T]): \quad l_1 = l_2 \equiv (\text{length}(l_1) = \text{length}(l_2) \wedge (\forall (i: \text{below}(\text{length}(l_1))): \text{nth}(l_1, i) = \text{nth}(l_2, i)))}{}$$

Inducting on l_1 on formula 1,

we get 3 subgoals:

`list_extensionality.1`:

$$\frac{\{1\} \quad \forall (l_2: \text{list}[T]): \quad \text{null} = l_2 \equiv (\text{length}(\text{null}) = \text{length}(l_2) \wedge (\forall (i: \text{below}(\text{length}(\text{null}))) : \text{nth}(\text{null}, i) = \text{nth}(l_2, i)))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `list_extensionality.1`.

list_extensionality.2:

$\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]):$ $\quad (\forall (l_2: \text{list}[T]):$ $\quad \quad \text{cons2_var} = l_2 \equiv$ $\quad \quad (\text{length}(\text{cons2_var}) = \text{length}(l_2) \wedge$ $\quad \quad (\forall (i: \text{below}(\text{length}(\text{cons2_var}))) : \text{nth}(\text{cons2_var}, i) = \text{nth}(l_2, i)))$ $\quad \supset$ $\quad (\forall (l_2: \text{list}[T]):$ $\quad \quad \text{cons}(\text{cons1_var}, \text{cons2_var}) = l_2 \equiv$ $\quad \quad (\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})) = \text{length}(l_2) \wedge$ $\quad \quad (\forall (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})))) :$ $\quad \quad \quad \text{nth}(\text{cons}(\text{cons1_var}, \text{cons2_var}), i) = \text{nth}(l_2, i)))$
--

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of length,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Instantiating the top quantifier in -1 with the terms: $\text{cdr}(l'_2)$,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

list_extensionality.2.1:

$\{-1\} \quad \text{cons2_var}' = \text{cdr}(l'_2)$ $\{-2\} \quad \text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$ $\{-3\} \quad \forall (i: \text{below}(\text{length}(\text{cons2_var}')) : \text{nth}(\text{cons2_var}', i) = \text{nth}(\text{cdr}(l'_2), i)$ $\{-4\} \quad \forall (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')))) :$ $\quad \quad \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i) = \text{nth}(l'_2, i)$
$\{1\} \quad \text{cons}(\text{cons1_var}', \text{cons2_var}') = l'_2$ $\{2\} \quad \text{null?}(l'_2)$

Applying extensionality,

Instantiating the top quantifier in -4 with the terms: 0,

we get 2 subgoals:

list_extensionality.2.1.1:

$\{-1\} \quad \text{cons2_var}' = \text{cdr}(l'_2)$ $\{-2\} \quad \text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$ $\{-3\} \quad \forall (i: \text{below}(\text{length}(\text{cons2_var}')) : \text{nth}(\text{cons2_var}', i) = \text{nth}(\text{cdr}(l'_2), i)$ $\{-4\} \quad \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), 0) = \text{nth}(l'_2, 0)$
$\{1\} \quad \text{cons1_var}' = \text{car}(l'_2)$ $\{2\} \quad \text{null?}(l'_2)$

Expanding the definition of nth,

which is trivially true.

This completes the proof of list_extensionality.2.1.1.

list_extensionality.2.1.2:

$\{-1\} \quad \text{cons2_var}' = \text{cdr}(l'_2)$ $\{-2\} \quad \text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$ $\{-3\} \quad \forall (i: \text{below}(\text{length}(\text{cons2_var}')) : \text{nth}(\text{cons2_var}', i) = \text{nth}(\text{cdr}(l'_2), i)$
$\{1\} \quad 0 < \text{length}[T](\text{cons}[T](\text{cons1_var}', \text{cons2_var}'))$ $\{2\} \quad \text{cons1_var}' = \text{car}(l'_2)$ $\{3\} \quad \text{null?}(l'_2)$

Expanding the definition of length,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of list_extensionality.2.1.2.

list_extensionality.2.2:

{-1}	$\text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$
{-2}	$\forall (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')))):$ $\text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i) = \text{nth}(l'_2, i)$
{1}	$\text{cons2_var}' = \text{cdr}(l'_2)$
{2}	$\forall (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = \text{nth}(\text{cdr}(l'_2), i)$
{3}	$\text{cons}(\text{cons1_var}', \text{cons2_var}') = l'_2$
{4}	$\text{null?}(l'_2)$

Repeatedly Skolemizing and flattening,
Instantiating the top quantifier in -3 with the terms: $i' + 1$,
we get 2 subgoals:

list_extensionality.2.2.1:

{-1}	$i' < \text{length}(\text{cons2_var}')$
{-2}	$\text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$
{-3}	$\text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i' + 1) = \text{nth}(l'_2, i' + 1)$
{1}	$\text{cons2_var}' = \text{cdr}(l'_2)$
{2}	$\text{nth}(\text{cons2_var}', i') = \text{nth}(\text{cdr}(l'_2), i')$
{3}	$\text{cons}(\text{cons1_var}', \text{cons2_var}') = l'_2$
{4}	$\text{null?}(l'_2)$

Expanding the definition of nth,
which is trivially true.
This completes the proof of list_extensionality.2.2.1.

list_extensionality.2.2.2:

{-1}	$i' < \text{length}(\text{cons2_var}')$
{-2}	$\text{length}(\text{cons2_var}') = \text{length}(\text{cdr}(l'_2))$
{1}	$1 + i' < \text{length}[T](\text{cons}[T](\text{cons1_var}', \text{cons2_var}'))$
{2}	$\text{cons2_var}' = \text{cdr}(l'_2)$
{3}	$\text{nth}(\text{cons2_var}', i') = \text{nth}(\text{cdr}(l'_2), i')$
{4}	$\text{cons}(\text{cons1_var}', \text{cons2_var}') = l'_2$
{5}	$\text{null?}(l'_2)$

Expanding the definition of length,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of list_extensionality.2.2.2.

list_extensionality.3:

{1}	$\forall (l_1, l_2: \text{list}[T]):$ $\text{length}(l_1) = \text{length}(l_2) \supset$ $(\forall (i: \text{below}(\text{length}[T](l_1))): i < \text{length}[T](l_2))$
{2}	$\forall (l_2: \text{list}[T]):$ $l'_1 = l_2 \equiv$ $(\text{length}(l'_1) = \text{length}(l_2) \wedge$ $(\forall (i: \text{below}(\text{length}(l'_1))): \text{nth}(l'_1, i) = \text{nth}(l_2, i)))$

Hiding formulas: 2,
Repeatedly Skolemizing and flattening,
Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `list_extensionality.3`.
Q.E.D.

C.138.32 More_List_Props.list_remove_TCC1

Terse proof for `list_remove_TCC1`.

`list_remove_TCC1`:

$$\{1\} \quad \forall (x: T, l: \text{list}[T], \text{car}: T, \text{cdr}: \text{list}[T]):$$

$$x = \text{car} \wedge l = \text{cons}(\text{car}, \text{cdr}) \supset \text{length}[T](\text{cdr}) < \text{length}[T](l)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `list_remove_TCC1`.
Q.E.D.

C.138.33 More_List_Props.list_remove_TCC2

Terse proof for `list_remove_TCC2`.

`list_remove_TCC2`:

$$\{1\} \quad \forall (x: T, l: \text{list}[T], \text{car}: T, \text{cdr}: \text{list}[T]):$$

$$\neg x = \text{car} \wedge l = \text{cons}(\text{car}, \text{cdr}) \supset \text{length}[T](\text{cdr}) < \text{length}[T](l)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `list_remove_TCC2`.
Q.E.D.

C.138.34 More_List_Props.list_remove_commutative

Terse proof for `list_remove_commutative`.

`list_remove_commutative`:

$$\{1\} \quad \forall (x, y: T, l: \text{list}[T]):$$

$$\text{list_remove}(x, \text{list_remove}(y, l)) = \text{list_remove}(y, \text{list_remove}(x, l))$$

By induction on l , and by repeatedly rewriting and simplifying,
This completes the proof of `list_remove_commutative`.
Q.E.D.

C.138.35 More_List_Props.member_list_remove

Terse proof for `member_list_remove`.

`member_list_remove`:

$$\{1\} \quad \forall (x, y: T, l: \text{list}[T]):$$

$$\text{member}(x, \text{list_remove}(y, l)) = \text{IF } x = y \text{ THEN FALSE ELSE } \text{member}(x, l) \text{ ENDIF}$$

By induction on l , and by repeatedly rewriting and simplifying,
This completes the proof of `member_list_remove`.
Q.E.D.

C.138.36 More_List_Props.nth_member

Terse proof for nth_member.

nth_member:

$$\frac{}{\{1\} \quad \forall (x: T, l: \text{list}[T]): \quad \text{member}(x, l) \equiv (\exists (i: \text{below}(\text{length}(l))): \text{nth}(l, i) = x)}$$

Inducting on l on formula 1,

we get 2 subgoals:

nth_member.1:

$$\frac{}{\{1\} \quad \forall (x: T): \text{member}(x, \text{null}) \equiv (\exists (i: \text{below}(\text{length}(\text{null})): \text{nth}(\text{null}, i) = x)}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of nth_member.1.

nth_member.2:

$$\frac{}{\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \quad \begin{aligned} &(\forall (x: T): \\ &\quad \text{member}(x, \text{cons2_var}) \equiv \\ &\quad (\exists (i: \text{below}(\text{length}(\text{cons2_var})): \text{nth}(\text{cons2_var}, i) = x)) \\ &\quad \supset \\ &(\forall (x: T): \\ &\quad \text{member}(x, \text{cons}(\text{cons1_var}, \text{cons2_var})) \equiv \\ &\quad (\exists (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})))): \\ &\quad \quad \text{nth}(\text{cons}(\text{cons1_var}, \text{cons2_var}), i) = x)) \end{aligned}}$$

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: member nth length

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

nth_member.2.1:

$$\frac{\begin{array}{l} \{-1\} \quad \forall (x: T): \\ \quad \text{member}(x, \text{cons2_var}') \equiv \\ \quad (\exists (i: \text{below}(\text{length}(\text{cons2_var}')): \text{nth}(\text{cons2_var}', i) = x) \\ \{-2\} \quad x' = \text{cons1_var}' \end{array}}{\{1\} \quad \exists (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')))): \quad \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i) = x'}$$

Instantiating the top quantifier in 1 with the terms: 0,

we get 2 subgoals:

nth_member.2.1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \forall (x: T): \\ \quad \text{member}(x, \text{cons2_var}') \equiv \\ \quad (\exists (i: \text{below}(\text{length}(\text{cons2_var}')): \text{nth}(\text{cons2_var}', i) = x) \\ \{-2\} \quad x' = \text{cons1_var}' \end{array}}{\{1\} \quad \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), 0) = x'}$$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of nth_member.2.1.1.

C Proof scripts

`nth_member.2.1.2:`

$$\begin{array}{l|l}
 \{-1\} & \forall (x: T): \\
 & \text{member}(x, \text{cons2_var}') \equiv \\
 & (\exists (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = x) \\
 \{-2\} & x' = \text{cons1_var}' \\
 \hline
 \{1\} & 0 < 1 + \text{length}(\text{cons2_var}')
 \end{array}$$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `nth_member.2.1.2`.

`nth_member.2.2:`

$$\begin{array}{l|l}
 \{-1\} & \forall (x: T): \\
 & \text{member}(x, \text{cons2_var}') \equiv \\
 & (\exists (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = x) \\
 \{-2\} & \text{member}(x', \text{cons2_var}') \\
 \hline
 \{1\} & \exists (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')))): \\
 & \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i) = x'
 \end{array}$$

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: $i' + 1$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `nth_member.2.2`.

`nth_member.2.3:`

$$\begin{array}{l|l}
 \{-1\} & \forall (x: T): \\
 & \text{member}(x, \text{cons2_var}') \equiv \\
 & (\exists (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = x) \\
 \{-2\} & \exists (i: \text{below}(\text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')))): \\
 & \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i) = x' \\
 \hline
 \{1\} & x' = \text{cons1_var}' \\
 \{2\} & \text{member}(x', \text{cons2_var}')
 \end{array}$$

Repeatedly Skolemizing and flattening,

Case splitting on $i!1 = 0$,

we get 2 subgoals:

`nth_member.2.3.1:`

$$\begin{array}{l|l}
 \{-1\} & i' = 0 \\
 \{-2\} & i' < \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}')) \\
 \{-3\} & \forall (x: T): \\
 & \text{member}(x, \text{cons2_var}') \equiv \\
 & (\exists (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = x) \\
 \{-4\} & \text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i') = x' \\
 \hline
 \{1\} & x' = \text{cons1_var}' \\
 \{2\} & \text{member}(x', \text{cons2_var}')
 \end{array}$$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `nth_member.2.3.1`.

`nth_member.2.3.2:`

$\{-1\}$	$i' < \text{length}(\text{cons}(\text{cons1_var}', \text{cons2_var}'))$
$\{-2\}$	$\forall (x: T):$ $\text{member}(x, \text{cons2_var}') \equiv$ $(\exists (i: \text{below}(\text{length}(\text{cons2_var}'))): \text{nth}(\text{cons2_var}', i) = x)$
$\{-3\}$	$\text{nth}(\text{cons}(\text{cons1_var}', \text{cons2_var}'), i') = x'$
$\{1\}$	
$\{1\}$	$i' = 0$
$\{2\}$	$x' = \text{cons1_var}'$
$\{3\}$	$\text{member}(x', \text{cons2_var}')$

Simplifying, rewriting, and recording with decision procedures,
Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
Instantiating the top quantifier in 2 with the terms: $i' - 1$,
This completes the proof of `nth_member.2.3.2`.
Q.E.D.

C.138.37 More_List_Props.flatten_TCC1

Terse proof for `flatten_TCC1`.

`flatten_TCC1:`

$\{1\}$	$\forall (\text{ll}: \text{list}[\text{list}[T]], \text{car}: \text{list}[T], \text{cdr}: \text{list}[\text{list}[T]]):$ $\text{ll} = \text{cons}(\text{car}, \text{cdr}) \supset \text{length}[\text{list}[T]](\text{cdr}) < \text{length}[\text{list}[T]](\text{ll})$
---------	--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `flatten_TCC1`.
Q.E.D.

C.138.38 More_List_Props.member_append

Terse proof for `member_append`.

`member_append:`

$\{1\}$	$\forall (x: T, l_1, l_2: \text{list}[T]):$ $\text{member}(x, \text{append}(l_1, l_2)) \equiv \text{member}(x, l_1) \vee \text{member}(x, l_2)$
---------	--

By induction on l_1 , and by repeatedly rewriting and simplifying,
This completes the proof of `member_append`.
Q.E.D.

C.138.39 More_List_Props.member_flatten

Terse proof for `member_flatten`.

`member_flatten:`

$\{1\}$	$\forall (x: T, \text{ll}: \text{list}[\text{list}[T]]):$ $\text{member}(x, \text{flatten}(\text{ll})) \equiv (\exists (l: \text{list}[T]): \text{member}(l, \text{ll}) \wedge \text{member}(x, l))$
---------	---

Inducting on ll on formula 1,
we get 2 subgoals:

C Proof scripts

`member_flatten.1:`

$$\frac{\{1\} \quad \forall (x: T): \quad \text{member}(x, \text{flatten}(\text{null})) \equiv (\exists (l: \text{list}[T]): \text{member}(l, \text{null}) \wedge \text{member}(x, l))}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `member_flatten.1`.

`member_flatten.2:`

$$\frac{\{1\} \quad \forall (\text{cons1_var}: \text{list}[T], \text{cons2_var}: \text{list}[\text{list}[T]]): \quad \begin{array}{l} (\forall (x: T): \\ \quad \text{member}(x, \text{flatten}(\text{cons2_var})) \equiv \\ \quad (\exists (l: \text{list}[T]): \text{member}(l, \text{cons2_var}) \wedge \text{member}(x, l)) \\ \supset \\ (\forall (x: T): \\ \quad \text{member}(x, \text{flatten}(\text{cons}(\text{cons1_var}, \text{cons2_var}))) \equiv \\ \quad (\exists (l: \text{list}[T]): \text{member}(l, \text{cons}(\text{cons1_var}, \text{cons2_var})) \wedge \text{member}(x, l)) \end{array}}{}$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `flatten`,
Rewriting using `member_append`, matching in `*`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
we get 3 subgoals:

`member_flatten.2.1:`

$$\frac{\begin{array}{l} \{-1\} \quad \forall (x: T): \\ \quad \text{member}(x, \text{flatten}(\text{cons2_var}')) \equiv \\ \quad (\exists (l: \text{list}[T]): \text{member}(l, \text{cons2_var}') \wedge \text{member}(x, l)) \\ \{-2\} \quad \text{member}(x', \text{cons1_var}') \end{array}}{\{1\} \quad \exists (l: \text{list}[T]): \text{member}(l, \text{cons}(\text{cons1_var}', \text{cons2_var}')) \wedge \text{member}(x', l)}$$

Instantiating the top quantifier in 1 with the terms: `cons1_var'`,
Simplifying, rewriting, and recording with decision procedures,
Expanding the definition of `member`,
which is trivially true.

This completes the proof of `member_flatten.2.1`.

`member_flatten.2.2:`

$$\frac{\begin{array}{l} \{-1\} \quad \forall (x: T): \\ \quad \text{member}(x, \text{flatten}(\text{cons2_var}')) \equiv \\ \quad (\exists (l: \text{list}[T]): \text{member}(l, \text{cons2_var}') \wedge \text{member}(x, l)) \\ \{-2\} \quad \text{member}(x', \text{flatten}(\text{cons2_var}')) \end{array}}{\{1\} \quad \exists (l: \text{list}[T]): \text{member}(l, \text{cons}(\text{cons1_var}', \text{cons2_var}')) \wedge \text{member}(x', l)}$$

Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
Expanding the definition of `member`,
which is trivially true.

This completes the proof of `member_flatten.2.2`.

member_flatten.2.3:

{-1}	$\forall (x: T):$ $\text{member}(x, \text{flatten}(\text{cons2_var}')) \equiv$ $(\exists (l: \text{list}[T]): \text{member}(l, \text{cons2_var}') \wedge \text{member}(x, l))$
{-2}	$\exists (l: \text{list}[T]): \text{member}(l, \text{cons}(\text{cons1_var}', \text{cons2_var}')) \wedge \text{member}(x', l)$
{1}	$\text{member}(x', \text{cons1_var}')$
{2}	$\text{member}(x', \text{flatten}(\text{cons2_var}'))$

Repeatedly Skolemizing and flattening,
 Expanding the definition of member,
 Simplifying, rewriting, and recording with decision procedures,
 Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of member_flatten.2.3.
 Q.E.D.

C.138.40 More_List_Props.map2_TCC1

Terse proof for map2_TCC1.

map2_TCC1:

{1}	$\forall (f: [T, T \rightarrow T], l_1, l_2: \text{list}[T], h_1: T, t_1: \text{list}[T]):$ $l_1 = \text{cons}(h_1, t_1) \supset$ $(\forall (h_2: T, t_2: \text{list}[T]):$ $l_2 = \text{cons}(h_2, t_2) \supset \text{length}[T](t_1) < \text{length}[T](l_1))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of map2_TCC1.
 Q.E.D.

C.138.41 More_List_Props.map2_property

Terse proof for map2_property.

map2_property:

{1}	$\forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_1, l_2: \text{list}[T]):$ $(\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \text{every}(P)(\text{map2}(f)(l_1, l_2))$
-----	--

Inducting on l_1 on formula 1,

we get 2 subgoals:

map2_property.1:

{1}	$\forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_2: \text{list}[T]):$ $(\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \text{every}(P)(\text{map2}(f)(\text{null}, l_2))$
-----	---

Repeatedly Skolemizing and flattening,
 Expanding the definition of every,
 Expanding the definition of map2,
 which is trivially true.
 This completes the proof of map2_property.1.

map2_property.2:

$$\begin{array}{|l}
 \{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\
 \quad (\forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_2: \text{list}[T]): \\
 \quad \quad (\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \text{every}(P)(\text{map2}(f)(\text{cons2_var}, l_2))) \\
 \quad \supset \\
 \quad (\forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_2: \text{list}[T]): \\
 \quad \quad (\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \\
 \quad \quad \text{every}(P)(\text{map2}(f)(\text{cons}(\text{cons1_var}, \text{cons2_var}), l_2)))
 \end{array}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of map2,
 Expanding the definition of every,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 we get 2 subgoals:

map2_property.2.1:

$$\begin{array}{|l}
 \{-1\} \quad \forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_2: \text{list}[T]): \\
 \quad (\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \text{every}(P)(\text{map2}(f)(\text{cons2_var}', l_2)) \\
 \{-2\} \quad \forall (t_1, t_2: T): P'(f'(t_1, t_2)) \\
 \hline
 \{1\} \quad \text{null?}(l_2') \\
 \{2\} \quad \text{every}(P')(\text{map2}(f')(\text{cons2_var}', \text{cdr}(l_2')))
 \end{array}$$

Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of map2_property.2.1.

map2_property.2.2:

$$\begin{array}{|l}
 \{-1\} \quad \forall (P: \text{PRED}[T], f: [T, T \rightarrow T], l_2: \text{list}[T]): \\
 \quad (\forall (t_1, t_2: T): P(f(t_1, t_2))) \supset \text{every}(P)(\text{map2}(f)(\text{cons2_var}', l_2)) \\
 \{-2\} \quad \forall (t_1, t_2: T): P'(f'(t_1, t_2)) \\
 \hline
 \{1\} \quad \text{null?}(l_2') \\
 \{2\} \quad P'(f'(\text{cons1_var}', \text{car}(l_2')))
 \end{array}$$

Instantiating quantified variables,
 This completes the proof of map2_property.2.2.
 Q.E.D.

C.139 Proofs for More_List_Props_2 (vfiasco-prelude.pvs)

C.139.1 More_List_Props_2.member_map

Terse proof for member_map.

member_map:

$$\begin{array}{|l}
 \{1\} \quad \forall (b: B, f: [A \rightarrow B], l: \text{list}[A]): \\
 \quad \text{member}(b, \text{map}(f)(l)) \equiv (\exists (a: A): \text{member}(a, l) \wedge f(a) = b)
 \end{array}$$

By induction on l , and by repeatedly rewriting and simplifying,
 This completes the proof of member_map.
 Q.E.D.

C.140 Proofs for More_More_List_Props (vfiasco-prelude.pvs)

C.140.1 More_More_List_Props.list_all_length

Terse proof for `list_all_length`.

`list_all_length`:

$$\frac{}{\{1\} \quad \forall (n: \text{nat}): \exists (l: \text{list}[T]): \text{length}(l) = n}$$

Inducting on n on formula 1,

we get 2 subgoals:

`list_all_length.1`:

$$\frac{}{\{1\} \quad \exists (l: \text{list}[T]): \text{length}(l) = 0}$$

Instantiating the top quantifier in 1 with the terms: `null`,

Expanding the definition of `length`,

which is trivially true.

This completes the proof of `list_all_length.1`.

`list_all_length.2`:

$$\frac{}{\{1\} \quad \forall j: \\ \quad (\exists (l: \text{list}[T]): \text{length}(l) = j) \supset \\ \quad (\exists (l: \text{list}[T]): \text{length}(l) = j + 1)}$$

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: `(cons(choose(LAMBDA (t: T): TRUE), !1))`,

we get 2 subgoals:

`list_all_length.2.1`:

$$\frac{\begin{array}{l} \{-1\} \quad j' \geq 0 \\ \{-2\} \quad \text{length}(l') = j' \end{array}}{\{1\} \quad \text{length}(\text{cons}(\text{choose}(\lambda (t: T): \text{TRUE}), l')) = j' + 1}$$

Expanding the definition of `length`,

which is trivially true.

This completes the proof of `list_all_length.2.1`.

`list_all_length.2.2`:

$$\frac{\begin{array}{l} \{-1\} \quad j' \geq 0 \\ \{-2\} \quad \text{length}(l') = j' \end{array}}{\{1\} \quad \text{nonempty?}[T](\lambda (t: T): \text{TRUE})}$$

Expanding the definition of `nonempty?`,

Expanding the definition of `empty?`,

Expanding the definition of `member`,

which is trivially true.

This completes the proof of `list_all_length.2.2`.

Q.E.D.

C.141 Proofs for More_Relations (vfiasco-prelude.pvs)

C.141.1 More_Relations.zorn_lr

Terse proof for zorn_lr.

zorn_lr:

$$\frac{\{1\} \quad \forall (R: \text{PRED}[[T, T]]): \text{well_founded?}(R) \supset \neg (\exists (f: [\text{nat} \rightarrow T]): \forall (n: \text{nat}): R(f(n+1), f(n)))}{}$$

Expanding the definition of well_founded?,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in -1 with the terms: (LAMBDA (t: T): EXISTS (n: nat): f!1(n) = t),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting, we get 2 subgoals:

zorn_lr.1:

$$\frac{\begin{array}{l} \{-1\} \quad \exists (y: (\lambda (t: T): \exists (n: \text{nat}): f'(n) = t)): \\ \quad \forall (x: (\lambda (t: T): \exists (n: \text{nat}): f'(n) = t)): (\neg R'(x, y)) \\ \{-2\} \quad \forall (n: \text{nat}): R'(f'(1+n), f'(n)) \end{array}}{}$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Instantiating quantified variables,

we get 3 subgoals:

zorn_lr.1.1:

$$\frac{\begin{array}{l} \{-1\} \quad n' \geq 0 \\ \{-2\} \quad f'(n') = y' \\ \{-3\} \quad R'(f'(1+n'), f'(n')) \end{array}}{\{1\} \quad R'(f'(1+n'), y')}$$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of zorn_lr.1.1.

zorn_lr.1.2:

$$\frac{\begin{array}{l} \{-1\} \quad n' \geq 0 \\ \{-2\} \quad f'(n') = y' \\ \{-3\} \quad R'(f'(1+n'), f'(n')) \end{array}}{\{1\} \quad \exists (n: \text{nat}): f'(n) = f'(1+n')}$$

Instantiating quantified variables,

This completes the proof of zorn_lr.1.2.

zorn_lr.1.3:

$$\frac{\begin{array}{l} \{-1\} \quad n' \geq 0 \\ \{-2\} \quad f'(n') = y' \\ \{-3\} \quad \forall (x: (\lambda (t: T): \exists (n: \text{nat}): f'(n) = t)): (\neg R'(x, y')) \\ \{-4\} \quad R'(f'(1+n'), f'(n')) \end{array}}{\{1\} \quad \exists (n: \text{nat}): f'(n) = f'(1+n')}$$

Instantiating quantified variables,

This completes the proof of zorn_lr.1.3.

zorn_lr.2:

$$\frac{\{-1\} \quad \forall (n: \text{nat}): R'(f'(1+n), f'(n))}{\{1\} \quad \exists (y: T): \exists (n: \text{nat}): f'(n) = y}$$

Instantiating the top quantifier in 1 with the terms: (f!1(0)),
 Instantiating quantified variables,
 This completes the proof of zorn_lr.2.
 Q.E.D.

C.142 Proofs for More_Sets_Lemmas (vfiasco-prelude.pvs)

C.142.1 More_Sets_Lemmas.subset_equal

Terse proof for subset_equal.

subset_equal:

$$\frac{}{\{1\} \quad \forall (a, b: \text{set}[T]): a = b \supset (a \subseteq b)}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of subset_equal.
 Q.E.D.

C.142.2 More_Sets_Lemmas.union_subset3

Terse proof for union_subset3.

union_subset3:

$$\frac{}{\{1\} \quad \forall (a, b: \text{set}[T]): (a \subseteq (b \cup a))}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of union_subset3.
 Q.E.D.

C.142.3 More_Sets_Lemmas.subset_bigger_union_left

Terse proof for subset_bigger_union_left.

subset_bigger_union_left:

$$\frac{}{\{1\} \quad \forall (a, b, c: \text{set}[T]): (a \subseteq b) \supset (a \subseteq (b \cup c))}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of subset_bigger_union_left.
 Q.E.D.

C.142.4 More_Sets_Lemmas.subset_bigger_union_right

Terse proof for subset_bigger_union_right.

subset_bigger_union_right:

$$\{1\} \quad \forall (a, b, c: \text{set}[T]): (a \subseteq c) \supset (a \subseteq (b \cup c))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `subset_bigger_union_right`.
Q.E.D.

C.142.5 More_Sets_Lemmas.union_empty_left

Terse proof for `union_empty_left`.

union_empty_left:

$$\{1\} \quad \forall (a: \text{set}[T]): (\text{emptyset} \cup a) = a$$

Repeatedly Skolemizing and flattening,
Rewriting using `union_commutative`, matching in *,
Rewriting using `union_empty`, matching in *,
This completes the proof of `union_empty_left`.
Q.E.D.

C.142.6 More_Sets_Lemmas.union_left

Terse proof for `union_left`.

union_left:

$$\{1\} \quad \forall (a, b: \text{set}[T], e: T): a(e) \supset \text{union}(a, b)(e)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `union_left`.
Q.E.D.

C.142.7 More_Sets_Lemmas.union_right

Terse proof for `union_right`.

union_right:

$$\{1\} \quad \forall (a, b: \text{set}[T], e: T): b(e) \supset \text{union}(a, b)(e)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `union_right`.
Q.E.D.

C.142.8 More_Sets_Lemmas.subset_of_differences

Terse proof for `subset_of_differences`.

subset_of_differences:

$$\{1\} \quad \forall (a, b, c: \text{set}[T]): (a \subseteq b) \supset ((c \setminus b) \subseteq (c \setminus a))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `subset_of_differences`.
 Q.E.D.

C.142.9 More_Sets_Lemmas.difference_disjoint_3

Terse proof for `difference_disjoint_3`.
`difference_disjoint_3`:

$$\{1\} \quad \forall (a, b: \text{set}[T]): \text{disjoint?}((b \setminus a), a)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `difference_disjoint_3`.
 Q.E.D.

C.142.10 More_Sets_Lemmas.subset_singleton

Terse proof for `subset_singleton`.
`subset_singleton`:

$$\{1\} \quad \forall (a: \text{set}[T], e: T): (\text{singleton}(e) \subseteq a) = a(e)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `subset_singleton`.
 Q.E.D.

C.142.11 More_Sets_Lemmas.subset_member

Terse proof for `subset_member`.
`subset_member`:

$$\{1\} \quad \forall (a, b: \text{set}[T], e: T): a(e) \wedge (a \subseteq b) \supset b(e)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `subset_member`.
 Q.E.D.

C.142.12 More_Sets_Lemmas.disjoint_symmetric

Terse proof for `disjoint_symmetric`.
`disjoint_symmetric`:

$$\{1\} \quad \forall (a, b: \text{set}[T]): \text{disjoint?}(a, b) = \text{disjoint?}(b, a)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `disjoint_symmetric`.
 Q.E.D.

C.142.13 More_Sets_Lemmas.disjoint_mono

Terse proof for disjoint_mono.

disjoint_mono:

$$\{1\} \quad \forall (a_1, a_2, b_1, b_2: \text{set}[T]): \\ (a_1 \subseteq a_2) \wedge (b_1 \subseteq b_2) \wedge \text{disjoint?}(a_2, b_2) \supset \text{disjoint?}(a_1, b_1)$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of disjoint_mono.

Q.E.D.

C.142.14 More_Sets_Lemmas.disjoint_subset_difference

Terse proof for disjoint_subset_difference.

disjoint_subset_difference:

$$\{1\} \quad \forall (a, b, c: \text{set}[T]): (a \subseteq b) \wedge \text{disjoint?}(a, c) \supset (a \subseteq (b \setminus c))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of disjoint_subset_difference.

Q.E.D.

C.143 Proofs for Number_Props (vfiasco-prelude.pvs)

C.143.1 Number_Props.number_split

Terse proof for number_split.

number_split:

$$\{1\} \quad \forall (x: \text{int}, a: \text{posnat}): x = a \times \text{ndiv}(x, a) + \text{rem}(a)(x)$$

Repeatedly Skolemizing and flattening,

Adding type constraints for ndiv(x!1, a!1),

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of number_split.

Q.E.D.

C.143.2 Number_Props.number_split_less

Terse proof for number_split_less.

number_split_less:

$$\{1\} \quad \forall (a, b, p, q: \text{nat}): a < p \supset (a + b \times p < p \times q \equiv b < q)$$

Repeatedly Skolemizing and flattening,

Applying both_sides_times_pos_le1

Instantiating the top quantifier in -1 with the terms: p' , $b' + 1$, q' ,

we get 2 subgoals:

number_split_less.1:

{-1}	$b' + 1 \times p' \leq q' \times p' \equiv b' + 1 \leq q'$
{-2}	$a' \geq 0$
{-3}	$b' \geq 0$
{-4}	$p' \geq 0$
{-5}	$q' \geq 0$
{-6}	$a' < p'$
{1}	
	$(a' + b' \times p' < p' \times q' \equiv b' < q')$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Applying both_sides_times_pos_lt1

Instantiating the top quantifier in -1 with the terms: p', b', q' ,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of number_split_less.1.

number_split_less.2:

{-1}	$a' \geq 0$
{-2}	$b' \geq 0$
{-3}	$p' \geq 0$
{-4}	$q' \geq 0$
{-5}	$a' < p'$
{1}	
	$p' > 0$
{2}	$(a' + b' \times p' < p' \times q' \equiv b' < q')$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of number_split_less.2.

Q.E.D.

C.143.3 Number_Props.bit_split_less

Terse proof for bit_split_less.

bit_split_less:

{1}	
	$\forall (q, r, j, k: \text{nat}):$
	$r < \text{expt}(2, k) \supset$
	$(q \times \text{expt}(2, k) + r < \text{expt}(2, k + j) \equiv q < \text{expt}(2, j))$

Repeatedly Skolemizing and flattening,

Applying number_split_less

Instantiating the top quantifier in -1 with the terms: $r', q', \text{expt}(2, k'), \text{expt}(2, j')$,

Rewriting using expt_plus_aux, matching in *,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of bit_split_less.

Q.E.D.

C.143.4 Number_Props.rem_def_pos

Terse proof for rem_def_pos.

rem_def_pos:

{1}	
	$\forall (b: \text{posnat}, x: \text{nat}):$
	$\forall (r: \text{mod}(b)): \text{rem}(b)(x) = r \equiv (\exists (q: \text{nat}): x = b \times q + r)$

C Proof scripts

Repeatedly Skolemizing and flattening,
Using lemma `rem_def`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
we get 2 subgoals:

`rem_def_pos.1`:

$$\begin{array}{l|l} \{-1\} & \text{rem}(b')(x') = r' \\ \{-2\} & \exists q: x' = b' \times q + r' \\ \{-3\} & r' < b' \\ \{-4\} & b' > 0 \\ \{-5\} & x' \geq 0 \\ \hline \{1\} & \exists (q: \text{nat}): x' = b' \times q + r' \end{array}$$

Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Using lemma `both_sides_times_pos_le2`,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of `rem_def_pos.1`.

`rem_def_pos.2`:

$$\begin{array}{l|l} \{-1\} & r' < b' \\ \{-2\} & b' > 0 \\ \{-3\} & x' \geq 0 \\ \{-4\} & \exists (q: \text{nat}): x' = b' \times q + r' \\ \hline \{1\} & \text{rem}(b')(x') = r' \\ \{2\} & \exists q: x' = b' \times q + r' \end{array}$$

Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
This completes the proof of `rem_def_pos.2`.
Q.E.D.

C.143.5 Number_Props.rem_rem

Terse proof for `rem_rem`.

`rem_rem`:

$$\begin{array}{l|l} \{1\} & \forall (a, b: \text{posnat}, x: \text{int}): \text{divides}(a, b) \supset \text{rem}(a)(\text{rem}(b)(x)) = \text{rem}(a)(x) \end{array}$$

Repeatedly Skolemizing and flattening,
Applying `rem_def`
Instantiating the top quantifier in -1 with the terms: a' , x' , $\text{rem}(a')(\text{rem}(b')(x'))$,
Simplifying, rewriting, and recording with decision procedures,
Hiding formulas: 2,
Adding type constraints for $\text{rem}(a!1)(\text{rem}(b!1)(x!1))$,
Adding type constraints for $\text{rem}(b!1)(x!1)$,
Expanding the definition of `divides`,
Repeatedly Skolemizing and flattening,
Replacing using formula -7,
Instantiating the top quantifier in 1 with the terms: $q'' + x'' \times q'$,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of `rem_rem`.
Q.E.D.

C.143.6 Number_Props.divides_times

Terse proof for divides_times.

divides_times:

$$\frac{\{1\} \quad \forall (i: \text{posnat}, j, k: \text{int}):}{\text{divides}(i \times j, k) \equiv \text{divides}(i, k) \wedge \text{divides}(j, \text{ndiv}(k, i))}$$

Repeatedly Skolemizing and flattening,

Splitting conjunctions,

we get 2 subgoals:

divides_times.1:

$$\frac{\begin{array}{l} \{-1\} \quad i' > 0 \\ \{-2\} \quad \text{integer_pred}(j') \\ \{-3\} \quad \text{integer_pred}(k') \end{array}}{\{1\} \quad \text{divides}(i' \times j', k') \supset \text{divides}(i', k') \wedge \text{divides}(j', \text{ndiv}(k', i'))}$$

Case splitting on divides(i!1, k!1),

we get 2 subgoals:

divides_times.1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{divides}(i', k') \\ \{-2\} \quad i' > 0 \\ \{-3\} \quad \text{integer_pred}(j') \\ \{-4\} \quad \text{integer_pred}(k') \end{array}}{\{1\} \quad \text{divides}(i' \times j', k') \supset \text{divides}(i', k') \wedge \text{divides}(j', \text{ndiv}(k', i'))}$$

Applying propositional simplification,

Adding type constraints for ndiv(k!1, i!1),

Case splitting on rem(i!1)(k!1) = 0,

we get 2 subgoals:

divides_times.1.1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{rem}(i')(k') = 0 \\ \{-2\} \quad k' = \text{rem}(i')(k') + i' \times \text{ndiv}(k', i') \\ \{-3\} \quad \text{divides}(i', k') \\ \{-4\} \quad \text{divides}(i' \times j', k') \\ \{-5\} \quad i' > 0 \\ \{-6\} \quad \text{integer_pred}(j') \\ \{-7\} \quad \text{integer_pred}(k') \end{array}}{\{1\} \quad \text{divides}(j', \text{ndiv}(k', i'))}$$

Replacing using formula -1,

Hiding formulas: -1, -3,

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of divides,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: x' ,

Applying both_sides_times1

Instantiating the top quantifier in -1 with the terms: i' , $\text{ndiv}(k', i')$, $j' \times x'$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of divides_times.1.1.1.

C Proof scripts

`divides_times.1.1.2:`

{-1}	$k' = \text{rem}(i')(k') + i' \times \text{ndiv}(k', i')$
{-2}	$\text{divides}(i', k')$
{-3}	$\text{divides}(i' \times j', k')$
{-4}	$i' > 0$
{-5}	$\text{integer_pred}(j')$
{-6}	$\text{integer_pred}(k')$
{1}	$\text{rem}(i')(k') = 0$
{2}	$\text{divides}(j', \text{ndiv}(k', i'))$

Rewriting using `rem_def2`, matching in `*`,

This completes the proof of `divides_times.1.1.2`.

`divides_times.1.2:`

{-1}	$i' > 0$
{-2}	$\text{integer_pred}(j')$
{-3}	$\text{integer_pred}(k')$
{1}	$\text{divides}(i', k')$
{2}	$\text{divides}(i' \times j', k') \supset \text{divides}(i', k') \wedge \text{divides}(j', \text{ndiv}(k', i'))$

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of `divides`,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: $x' \times j'$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `divides_times.1.2`.

`divides_times.2:`

{-1}	$i' > 0$
{-2}	$\text{integer_pred}(j')$
{-3}	$\text{integer_pred}(k')$
{1}	$\text{divides}(i', k') \wedge \text{divides}(j', \text{ndiv}(k', i')) \supset \text{divides}(i' \times j', k')$

Applying disjunctive simplification to flatten sequent,

Adding type constraints for `ndiv(k!1, i!1)`,

Case splitting on `rem(i!1)(k!1) = 0`,

we get 2 subgoals:

`divides_times.2.1:`

{-1}	$\text{rem}(i')(k') = 0$
{-2}	$k' = \text{rem}(i')(k') + i' \times \text{ndiv}(k', i')$
{-3}	$\text{divides}(i', k')$
{-4}	$\text{divides}(j', \text{ndiv}(k', i'))$
{-5}	$i' > 0$
{-6}	$\text{integer_pred}(j')$
{-7}	$\text{integer_pred}(k')$
{1}	$\text{divides}(i' \times j', k')$

Replacing using formula -1,

Hiding formulas: -1, -3,

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of `divides`,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in 1 with the terms: x' ,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `divides_times.2.1`.

`divides_times.2.2`:

{-1}	$k' = \text{rem}(i')(k') + i' \times \text{ndiv}(k', i')$
{-2}	$\text{divides}(i', k')$
{-3}	$\text{divides}(j', \text{ndiv}(k', i'))$
{-4}	$i' > 0$
{-5}	$\text{integer_pred}(j')$
{-6}	$\text{integer_pred}(k')$
{1}	$\text{rem}(i')(k') = 0$
{2}	$\text{divides}(i' \times j', k')$

Rewriting using `rem_def2`, matching in `*`,

This completes the proof of `divides_times.2.2`.

Q.E.D.

C.143.7 Number_Props.ndiv_floor

Terse proof for `ndiv_floor`.

`ndiv_floor`:

{1}	$\forall (a: \text{int}, b: \text{posnat}): \text{ndiv}(a, b) = \text{floor}(a/b)$
-----	--

Repeatedly Skolemizing and flattening,

Adding type constraints for `ndiv(a!1, b!1)`,

Using lemma `rem_floor`,

Applying `unique_quotient`

Instantiating the top quantifier in -1 with the terms: b' , $\text{ndiv}(a', b')$, $\text{floor}(a'/b')$, $\text{rem}(b')(a')$, $\text{rem}(b')(a')$,

Simplifying, rewriting, and recording with decision procedures,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_floor`.

Q.E.D.

C.143.8 Number_Props.ndiv_self

Terse proof for `ndiv_self`.

`ndiv_self`:

{1}	$\forall (a: \text{posnat}): \text{ndiv}(a, a) = 1$
-----	---

Repeatedly Skolemizing and flattening,

Adding type constraints for `ndiv(a!1, a!1)`,

Rewriting using `rem_self`, matching in `*`,

Simplifying, rewriting, and recording with decision procedures,

Applying `both_sides_times2`

Instantiating the top quantifier in -1 with the terms: a' , 1, $\text{ndiv}(a', a')$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_self`.

Q.E.D.

C.143.9 Number_Props.ndiv_plus_1

Terse proof for `ndiv_plus_1`.

`ndiv_plus_1`:

<pre>{1} $\forall (a, b: \text{int}, c: \text{posnat}):$ $\text{divides}(c, a) \supset \text{ndiv}(a + b, c) = \text{ndiv}(a, c) + \text{ndiv}(b, c)$</pre>
--

Repeatedly Skolemizing and flattening,

Applying `rem_def2`

Instantiating the top quantifier in -1 with the terms: c' , a' , 0,

Simplifying, rewriting, and recording with decision procedures,

Adding type constraints for `ndiv(a!1 + b!1, c!1)`,

Applying `rem_sum1`

Instantiating the top quantifier in -1 with the terms: c' , a' , b' ,

Replacing using formula -3,

Simplifying, rewriting, and recording with decision procedures,

Replacing using formula -1,

Hiding formulas: -1,

Adding type constraints for `ndiv(a!1, c!1)`,

Adding type constraints for `ndiv(b!1, c!1)`,

Case splitting on $c!1 * (\text{ndiv}(a!1, c!1) + \text{ndiv}(b!1, c!1)) = c!1 * \text{ndiv}(a!1 + b!1, c!1)$,

we get 2 subgoals:

`ndiv_plus_1.1`:

<pre>{-1} $c' \times (\text{ndiv}(a', c') + \text{ndiv}(b', c')) = c' \times \text{ndiv}(a' + b', c')$ {-2} $b' = \text{rem}(c')(b') + c' \times \text{ndiv}(b', c')$ {-3} $a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c')$ {-4} $a' + b' = \text{rem}(c')(b') + c' \times \text{ndiv}(a' + b', c')$ {-5} $\text{rem}(c')(a') = 0$ {-6} $\text{integer_pred}(a')$ {-7} $\text{integer_pred}(b')$ {-8} $c' > 0$ {-9} $\text{divides}(c', a')$</pre>	<pre>{1} $\text{ndiv}(a' + b', c') = \text{ndiv}(a', c') + \text{ndiv}(b', c')$</pre>
--	---

Applying `both_sides_times2`

Instantiating the top quantifier in -1 with the terms: c' , $(\text{ndiv}(a', c') + \text{ndiv}(b', c'))$, $\text{ndiv}(a' + b', c')$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_plus_1.1`.

`ndiv_plus_1.2`:

<pre>{-1} $b' = \text{rem}(c')(b') + c' \times \text{ndiv}(b', c')$ {-2} $a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c')$ {-3} $a' + b' = \text{rem}(c')(b') + c' \times \text{ndiv}(a' + b', c')$ {-4} $\text{rem}(c')(a') = 0$ {-5} $\text{integer_pred}(a')$ {-6} $\text{integer_pred}(b')$ {-7} $c' > 0$ {-8} $\text{divides}(c', a')$</pre>	<pre>{1} $c' \times (\text{ndiv}(a', c') + \text{ndiv}(b', c')) = c' \times \text{ndiv}(a' + b', c')$ {2} $\text{ndiv}(a' + b', c') = \text{ndiv}(a', c') + \text{ndiv}(b', c')$</pre>
--	--

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_plus_1.2`.

Q.E.D.

C.143.10 Number_Props.ndiv_plus_2

Terse proof for `ndiv_plus_2`.

`ndiv_plus_2`:

$$\frac{\{1\} \quad \forall (a, b: \text{int}, c: \text{posnat}): \quad \text{divides}(c, b) \supset \text{ndiv}(a + b, c) = \text{ndiv}(a, c) + \text{ndiv}(b, c)}{\quad}$$

Repeatedly Skolemizing and flattening,

Using lemma `ndiv_plus_1`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_plus_2`.

Q.E.D.

C.143.11 Number_Props.ndiv_plus_mod

Terse proof for `ndiv_plus_mod`.

`ndiv_plus_mod`:

$$\frac{\{1\} \quad \forall (a: \text{int}, c: \text{posnat}, b: \text{mod}(c)): \quad \text{divides}(c, a) \supset \text{ndiv}(a + b, c) = \text{ndiv}(a, c)}{\quad}$$

Repeatedly Skolemizing and flattening,

Adding type constraints for `ndiv(a!1, c!1)`,

Case splitting on `rem(c!1)(a!1) = 0`,

we get 2 subgoals:

`ndiv_plus_mod.1`:

$$\frac{\begin{array}{l} \{-1\} \quad \text{rem}(c')(a') = 0 \\ \{-2\} \quad a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c') \\ \{-3\} \quad \text{integer_pred}(a') \\ \{-4\} \quad c' > 0 \\ \{-5\} \quad b' < c' \\ \{-6\} \quad \text{divides}(c', a') \end{array}}{\{1\} \quad \text{ndiv}(a' + b', c') = \text{ndiv}(a', c')}$$

Replacing using formula -1,

Hiding formulas: -1,

Simplifying, rewriting, and recording with decision procedures,

Adding type constraints for `ndiv(a!1 + b!1, c!1)`,

Case splitting on `rem(c!1)(a!1 + b!1) = b!1`,

we get 2 subgoals:

C Proof scripts

`ndiv_plus_mod.1.1:`

{-1}	$\text{rem}(c')(a' + b') = b'$
{-2}	$a' + b' = \text{rem}(c')(a' + b') + c' \times \text{ndiv}(a' + b', c')$
{-3}	$a' = c' \times \text{ndiv}(a', c')$
{-4}	$\text{integer_pred}(a')$
{-5}	$c' > 0$
{-6}	$b' < c'$
{-7}	$\text{divides}(c', a')$
{1}	$\text{ndiv}(a' + b', c') = \text{ndiv}(a', c')$

Replacing using formula -1,

Hiding formulas: -1,

Simplifying, rewriting, and recording with decision procedures,

Applying `both_sides_times2`

Instantiating the top quantifier in -1 with the terms: c' , $\text{ndiv}(a' + b', c')$, $\text{ndiv}(a', c')$,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_plus_mod.1.1`.

`ndiv_plus_mod.1.2:`

{-1}	$a' + b' = \text{rem}(c')(a' + b') + c' \times \text{ndiv}(a' + b', c')$
{-2}	$a' = c' \times \text{ndiv}(a', c')$
{-3}	$\text{integer_pred}(a')$
{-4}	$c' > 0$
{-5}	$b' < c'$
{-6}	$\text{divides}(c', a')$
{1}	$\text{rem}(c')(a' + b') = b'$
{2}	$\text{ndiv}(a' + b', c') = \text{ndiv}(a', c')$

Hiding formulas: -1, -2, 2,

Rewriting using `rem_def`, matching in *,

Expanding the definition of `divides`,

which is trivially true.

This completes the proof of `ndiv_plus_mod.1.2`.

`ndiv_plus_mod.2:`

{-1}	$a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c')$
{-2}	$\text{integer_pred}(a')$
{-3}	$c' > 0$
{-4}	$b' < c'$
{-5}	$\text{divides}(c', a')$
{1}	$\text{rem}(c')(a') = 0$
{2}	$\text{ndiv}(a' + b', c') = \text{ndiv}(a', c')$

Rewriting using `rem_def2`, matching in *,

This completes the proof of `ndiv_plus_mod.2`.

Q.E.D.

C.143.12 `Number_Props.ndiv_plus_mod_2`

Terse proof for `ndiv_plus_mod_2`.

`ndiv_plus_mod_2:`

$$\frac{\{1\} \quad \forall (a: \text{int}, c: \text{posnat}, b_1, b_2: \text{mod}(c)):\quad \text{divides}(c, a) \supset \text{ndiv}(a + b_1, c) = \text{ndiv}(a + b_2, c)}{\quad}$$

Repeatedly Skolemizing and flattening,

Applying `ndiv_plus_mod`

Instantiating (with copying) the top quantifier in -1 with the terms: a', c', b'_1 ,

Instantiating the top quantifier in -1 with the terms: a', c', b'_2 ,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_plus_mod_2`.

Q.E.D.

C.143.13 Number_Props.ndiv_minus_2

Terse proof for `ndiv_minus_2`.

`ndiv_minus_2:`

$$\frac{\{1\} \quad \forall (a, b: \text{int}, c: \text{posnat}): \quad \text{divides}(c, b) \supset \text{ndiv}(a - b, c) = \text{ndiv}(a, c) - \text{ndiv}(b, c)}{\quad}$$

Repeatedly Skolemizing and flattening,

Applying `ndiv_plus_2`

Instantiating the top quantifier in -1 with the terms: $a', -b', c'$,

Case splitting on `divides(c!1, -b!1)`,

we get 2 subgoals:

`ndiv_minus_2.1:`

$$\frac{\begin{array}{l} \{-1\} \quad \text{divides}(c', -b') \\ \{-2\} \quad \text{divides}(c', -b') \supset \\ \quad \text{ndiv}(a' + -b', c') = \text{ndiv}(a', c') + \text{ndiv}(-b', c') \\ \{-3\} \quad \text{integer_pred}(a') \\ \{-4\} \quad \text{integer_pred}(b') \\ \{-5\} \quad c' > 0 \\ \{-6\} \quad \text{divides}(c', b') \end{array}}{\{1\} \quad \text{ndiv}(a' - b', c') = \text{ndiv}(a', c') - \text{ndiv}(b', c')}$$

Simplifying, rewriting, and recording with decision procedures,

Case splitting on `-ndiv(b!1, c!1) = ndiv(-b!1, c!1)`,

we get 2 subgoals:

`ndiv_minus_2.1.1:`

$$\frac{\begin{array}{l} \{-1\} \quad -\text{ndiv}(b', c') = \text{ndiv}(-b', c') \\ \{-2\} \quad \text{divides}(c', -b') \\ \{-3\} \quad \text{ndiv}(-b' + a', c') = \text{ndiv}(-b', c') + \text{ndiv}(a', c') \\ \{-4\} \quad \text{integer_pred}(a') \\ \{-5\} \quad \text{integer_pred}(b') \\ \{-6\} \quad c' > 0 \\ \{-7\} \quad \text{divides}(c', b') \end{array}}{\{1\} \quad \text{ndiv}(a' - b', c') = \text{ndiv}(a', c') - \text{ndiv}(b', c')}$$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_minus_2.1.1`.

C Proof scripts

ndiv_minus_2.1.2:

{-1}	$\text{divides}(c', -b')$
{-2}	$\text{ndiv}(-b' + a', c') = \text{ndiv}(-b', c') + \text{ndiv}(a', c')$
{-3}	$\text{integer_pred}(a')$

 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of mod_rem.
 Q.E.D.

C.143.21 Number_Props.ndiv_rem_divisible_TCC1

Terse proof for ndiv_rem_divisible_TCC1.

ndiv_rem_divisible_TCC1:

$$\frac{}{\{1\} \quad \forall (a, c: \text{posnat}): \text{divides}(c, a) \wedge c \leq a \supset \text{ndiv}(a, c) > 0}$$

Repeatedly Skolemizing and flattening,
 Adding type constraints for ndiv(a!1, c!1),
 Case splitting on rem(c!1)(a!1) = 0,
 we get 2 subgoals:

ndiv_rem_divisible_TCC1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{rem}(c')(a') = 0 \\ \{-2\} \quad a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c') \\ \{-3\} \quad \text{ndiv}(a', c') \leq a' \\ \{-4\} \quad a' > 0 \\ \{-5\} \quad c' > 0 \\ \{-6\} \quad \text{divides}(c', a') \\ \{-7\} \quad c' \leq a' \end{array}}{\{1\} \quad \text{ndiv}(a', c') > 0}$$

Replacing using formula -1,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of ndiv_rem_divisible_TCC1.1.

ndiv_rem_divisible_TCC1.2:

$$\frac{\begin{array}{l} \{-1\} \quad a' = \text{rem}(c')(a') + c' \times \text{ndiv}(a', c') \\ \{-2\} \quad \text{ndiv}(a', c') \leq a' \\ \{-3\} \quad a' > 0 \\ \{-4\} \quad c' > 0 \\ \{-5\} \quad \text{divides}(c', a') \\ \{-6\} \quad c' \leq a' \end{array}}{\begin{array}{l} \{1\} \quad \text{rem}(c')(a') = 0 \\ \{2\} \quad \text{ndiv}(a', c') > 0 \end{array}}$$

Rewriting using rem_def2, matching in *,
 This completes the proof of ndiv_rem_divisible_TCC1.2.
 Q.E.D.

C.143.22 Number_Props.ndiv_rem_divisible

Terse proof for ndiv_rem_divisible.

C Proof scripts

`ndiv_rem_divisible:`

$\{1\}$	$\forall (a, c: \text{posnat}, b: \text{int}):$ $\text{divides}(c, a) \wedge c \leq a \supset$ $\text{ndiv}(\text{rem}(a)(b), c) = \text{rem}(\text{ndiv}(a, c))(\text{ndiv}(b, c))$
---------	--

Repeatedly Skolemizing and flattening,

Expanding the definition of divides,

Repeatedly Skolemizing and flattening,

Replacing using formula -5,

Rewriting using `rem_ndiv`, matching in *,

we get 2 subgoals:

`ndiv_rem_divisible.1:`

$\{-1\}$ <code>integer_pred(x')</code> $\{-2\}$ $c' \times x' > 0$ $\{-3\}$ $c' > 0$ $\{-4\}$ <code>integer_pred(b')</code> $\{-5\}$ $a' = c' \times x'$ $\{-6\}$ $c' \leq c' \times x'$	$\{1\}$ $\text{rem}(x')(\text{ndiv}(b', c')) = \text{rem}(\text{ndiv}(c' \times x', c'))(\text{ndiv}(b', c'))$
---	--

Rewriting using `ndiv_times_divident_1`, matching in *,

we get 2 subgoals:

`ndiv_rem_divisible.1.1:`

$\{-1\}$ <code>integer_pred(x')</code> $\{-2\}$ $c' \times x' > 0$ $\{-3\}$ $c' > 0$ $\{-4\}$ <code>integer_pred(b')</code> $\{-5\}$ $a' = c' \times x'$ $\{-6\}$ $c' \leq c' \times x'$	$\{1\}$ $\text{rem}(x')(\text{ndiv}(b', c')) = \text{rem}(\text{ndiv}(c', c') \times x')(\text{ndiv}(b', c'))$
---	--

Rewriting using `ndiv_self`, matching in *,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_rem_divisible.1.1`.

`ndiv_rem_divisible.1.2:`

$\{-1\}$ <code>integer_pred(x')</code> $\{-2\}$ $c' \times x' > 0$ $\{-3\}$ $c' > 0$ $\{-4\}$ <code>integer_pred(b')</code> $\{-5\}$ $a' = c' \times x'$ $\{-6\}$ $c' \leq c' \times x'$	$\{1\}$ <code>divides(c', c')</code> $\{2\}$ $\text{rem}(x')(\text{ndiv}(b', c')) = \text{rem}(\text{ndiv}(c' \times x', c'))(\text{ndiv}(b', c'))$
---	--

Rewriting using `divides_reflexive`, matching in *,

This completes the proof of `ndiv_rem_divisible.1.2`.

ndiv_rem_divisible.2:

{-1}	integer_pred(x')
{-2}	$c' \times x' > 0$
{-3}	$c' > 0$
{-4}	integer_pred(b')
{-5}	$a' = c' \times x'$
{-6}	$c' \leq c' \times x'$
{1}	$x' \geq 0 \wedge x' > 0$
{2}	$\text{ndiv}(\text{rem}(c' \times x')(b'), c') =$ $\text{rem}(\text{ndiv}(c' \times x', c'))(\text{ndiv}(b', c'))$

Applying both_sides_times_pos_gt2

Instantiating the top quantifier in -1 with the terms: c' , x' , 0,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of ndiv_rem_divisible.2.
Q.E.D.

C.143.23 Number_Props.expt_2_8

Terse proof for expt_2_8.

expt_2_8:

{1}	$\text{expt}(2, 8) = 256$
-----	---------------------------

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of expt_2_8.
Q.E.D.

C.143.24 Number_Props.ndiv_0

Terse proof for ndiv_0.

ndiv_0:

{1}	$\forall (b: \text{posnat}): \text{ndiv}(0, b) = 0$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of ndiv_0.
Q.E.D.

C.143.25 Number_Props.ndiv_1

Terse proof for ndiv_1.

ndiv_1:

{1}	$\forall (i: \text{int}): \text{ndiv}(i, 1) = i$
-----	--

Repeatedly Skolemizing and flattening,
Adding type constraints for ndiv(i!1, 1),
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of ndiv_1.
Q.E.D.

C.143.26 Number_Props.ndiv_bigger

Terse proof for `ndiv_bigger`.

`ndiv_bigger`:

$$\{1\} \quad \forall (n: \text{nat}, m: \text{posnat}): n < m \supset \text{ndiv}(n, m) = 0$$

Repeatedly Skolemizing and flattening,
 Adding type constraints for `ndiv(n!1, m!1)`,
 Rewriting using `rem_mod2`, matching in `*`,
 Simplifying, rewriting, and recording with decision procedures,
 Applying `both_sides_times2`
 Instantiating the top quantifier in -1 with the terms: `m', 0, ndiv(n', m')`,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `ndiv_bigger`.
 Q.E.D.

C.143.27 Number_Props.ndiv_reduce

Terse proof for `ndiv_reduce`.

`ndiv_reduce`:

$$\{1\} \quad \forall (a: \text{int}, b: \text{posnat}, c: \text{int}, d: \text{posnat}): \\ a \times d = b \times c \supset \text{ndiv}(a, b) = \text{ndiv}(c, d)$$

Repeatedly Skolemizing and flattening,
 Rewriting using `ndiv_floor`, matching in `*`,
 Rewriting using `ndiv_floor`, matching in `*`,
 Case splitting on `a!1 / b!1 = c!1 / d!1`,
 we get 2 subgoals:

`ndiv_reduce.1`:

$$\begin{array}{l} \{-1\} \quad a'/b' = c'/d' \\ \{-2\} \quad \text{integer_pred}(a') \\ \{-3\} \quad b' > 0 \\ \{-4\} \quad \text{integer_pred}(c') \\ \{-5\} \quad d' > 0 \\ \{-6\} \quad a' \times d' = b' \times c' \\ \hline \{1\} \quad \text{floor}(a'/b') = \text{floor}(c'/d') \end{array}$$

Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `ndiv_reduce.1`.

`ndiv_reduce.2`:

$$\begin{array}{l} \{-1\} \quad \text{integer_pred}(a') \\ \{-2\} \quad b' > 0 \\ \{-3\} \quad \text{integer_pred}(c') \\ \{-4\} \quad d' > 0 \\ \{-5\} \quad a' \times d' = b' \times c' \\ \hline \{1\} \quad a'/b' = c'/d' \\ \{2\} \quad \text{floor}(a'/b') = \text{floor}(c'/d') \end{array}$$

Case splitting on `a!1 / b!1 * b!1 = c!1 / d!1 * b!1`,
 we get 2 subgoals:

ndiv_reduce.2.1:

{-1}	$a'/b' \times b' = c'/d' \times b'$
{-2}	$\text{integer_pred}(a')$
{-3}	$b' > 0$
{-4}	$\text{integer_pred}(c')$
{-5}	$d' > 0$
{-6}	$a' \times d' = b' \times c'$
{1}	$a'/b' = c'/d'$
{2}	$\text{floor}(a'/b') = \text{floor}(c'/d')$

Simplifying, rewriting, and recording with decision procedures,
This completes the proof of ndiv_reduce.2.1.

ndiv_reduce.2.2:

{-1}	$\text{integer_pred}(a')$
{-2}	$b' > 0$
{-3}	$\text{integer_pred}(c')$
{-4}	$d' > 0$
{-5}	$a' \times d' = b' \times c'$
{1}	$a'/b' \times b' = c'/d' \times b'$
{2}	$a'/b' = c'/d'$
{3}	$\text{floor}(a'/b') = \text{floor}(c'/d')$

Applying both_sides_times1
Instantiating the top quantifier in -1 with the terms: $d', a'/b' \times b', c'/d' \times b'$,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of ndiv_reduce.2.2.
Q.E.D.

C.143.28 Number_Props.ndiv_expt_expt_TCC1

Terse proof for ndiv_expt_expt_TCC1.

ndiv_expt_expt_TCC1:

{1}	$\forall (a: \text{posnat}, n, m: \text{nat}): \neg n < m \wedge a > 1 \supset n - m \geq 0$
-----	--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of ndiv_expt_expt_TCC1.
Q.E.D.

C.143.29 Number_Props.ndiv_expt_expt

Terse proof for ndiv_expt_expt.

ndiv_expt_expt:

{1}	$\forall (a: \text{posnat}, n, m: \text{nat}):$ $a > 1 \supset$ $\text{ndiv}(\text{expt}(a, n), \text{expt}(a, m)) =$ $\text{IF } n < m \text{ THEN } 0 \text{ ELSE } \text{expt}(a, n - m) \text{ ENDIF}$
-----	---

Repeatedly Skolemizing and flattening,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
we get 2 subgoals:

C Proof scripts

`ndiv_expt_expt.1:`

{-1}	$a' > 0$
{-2}	$n' \geq 0$
{-3}	$m' \geq 0$
{-4}	$a' > 1$
{-5}	$n' < m'$
{1}	
	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = 0$

Rewriting using `ndiv_bigger`, matching in `*`,

Applying `both_sides_expt_gt1_lt_aux`

Instantiating the top quantifier in -1 with the terms: $a', n' - 1, m' - 1$,
we get 2 subgoals:

`ndiv_expt_expt.1.1:`

{-1}	$\text{expt}(a', n' - 1 + 1) < \text{expt}(a', m' - 1 + 1) \equiv$ $n' - 1 < m' - 1$
{-2}	$a' > 0$
{-3}	$n' \geq 0$
{-4}	$m' \geq 0$
{-5}	$a' > 1$
{-6}	$n' < m'$
{1}	
	$\text{expt}(a', n') < \text{expt}(a', m')$
{2}	
	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = 0$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_expt_expt.1.1`.

`ndiv_expt_expt.1.2:`

{-1}	$a' > 0$
{-2}	$n' \geq 0$
{-3}	$m' \geq 0$
{-4}	$a' > 1$
{-5}	$n' < m'$
{1}	
	$n' - 1 \geq 0$
{2}	
	$\text{expt}(a', n') < \text{expt}(a', m')$
{3}	
	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = 0$

Expanding the definition of `expt`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Applying `increasing_expt_aux`

Instantiating the top quantifier in -1 with the terms: $a', m' - 2$,
we get 2 subgoals:

`ndiv_expt_expt.1.2.1:`

{-1}	$\text{expt}(a', m' - 2 + 2) > a'$
{-2}	$a' > 0$
{-3}	$n' \geq 0$
{-4}	$m' \geq 0$
{-5}	$a' > 1$
{-6}	$n' < m'$
{1}	
	$n' - 1 \geq 0$
{2}	
	$1 < \text{expt}(a', m')$
{3}	
	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = 0$

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_expt_expt.1.2.1`.

`ndiv_expt_expt.1.2.2`:

{-1}	$a' > 0$
{-2}	$n' \geq 0$
{-3}	$m' \geq 0$
{-4}	$a' > 1$
{-5}	$n' < m'$
{1}	$m' - 2 \geq 0$
{2}	$n' - 1 \geq 0$
{3}	$1 < \text{expt}(a', m')$
{4}	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = 0$

Expanding the definition of `expt`,

Expanding the definition of `expt`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `ndiv_expt_expt.1.2.2`.

`ndiv_expt_expt.2`:

{-1}	$a' > 0$
{-2}	$n' \geq 0$
{-3}	$m' \geq 0$
{-4}	$a' > 1$
{1}	$n' < m'$
{2}	$\text{ndiv}(\text{expt}(a', n'), \text{expt}(a', m')) = \text{expt}(a', n' - m')$

Applying `ndiv_reduce`

Instantiating the top quantifier in -1 with the terms: `expt(a', n')`, `expt(a', m')`, `expt(a', n' - m')`, 1,

Rewriting using `expt_plus_aux`, matching in `*`,

Rewriting using `ndiv_1`, matching in `*`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `ndiv_expt_expt.2`.

Q.E.D.

C.143.30 Number_Props.min_plus1_TCC1

Terse proof for `min_plus1_TCC1`.

`min_plus1_TCC1`:

{1}	$\forall (P: (\text{nonempty?}[\text{nat}])): \neg P(0) \supset \text{nonempty?}[\text{nat}](\lambda (n: \text{nat}): P(n + 1))$
-----	--

Repeatedly Skolemizing and flattening,

Expanding the definition of `nonempty?`,

Expanding the definition of `empty?`,

Repeatedly Skolemizing and flattening,

Expanding the definition of `member`,

Case splitting on `x!1 = 0`,

we get 2 subgoals:

min_plus1_TCC1.1:

{-1}	$x' = 0$
{-2}	$x' \geq 0$
{-3}	$P'(x')$
{-4}	$\forall (x: \text{nat}): \neg P'(1+x)$
{1}	
	$P'(0)$

Simplifying, rewriting, and recording with decision procedures,
This completes the proof of min_plus1_TCC1.1.

min_plus1_TCC1.2:

{-1}	$x' \geq 0$
{-2}	$P'(x')$
{-3}	$\forall (x: \text{nat}): \neg P'(1+x)$
{1}	
	$x' = 0$
{2}	$P'(0)$

Instantiating the top quantifier in -3 with the terms: $x' - 1$,
we get 2 subgoals:

min_plus1_TCC1.2.1:

{-1}	$x' \geq 0$
{-2}	$P'(x')$
{1}	
	$x' = 0$
{2}	$P'(0)$
{3}	$P'(1+x'-1)$

Simplifying, rewriting, and recording with decision procedures,
This completes the proof of min_plus1_TCC1.2.1.

min_plus1_TCC1.2.2:

{-1}	$x' \geq 0$
{-2}	$P'(x')$
{1}	
	$x' - 1 \geq 0$
{2}	$x' = 0$
{3}	$P'(0)$

Simplifying, rewriting, and recording with decision procedures,
This completes the proof of min_plus1_TCC1.2.2.

Q.E.D.

C.143.31 Number_Props.min_plus1

Terse proof for min_plus1.

min_plus1:

{1}	$\forall (P: (\text{nonempty?}[\text{nat}])): \neg P(0) \supset \min(P) = \min(\lambda (n: \text{nat}): P(n+1)) + 1$
-----	--

Repeatedly Skolemizing and flattening,
Using lemma min_def,
we get 3 subgoals:

min_plus1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \min(\lambda (n: \text{nat}): P'(n+1)) = \min(P') - 1 \equiv \\ \quad \text{minimum?}(\min(P') - 1, \lambda (n: \text{nat}): P'(n+1)) \\ \{-2\} \quad \text{nonempty?}[\text{nat}](P') \end{array}}{\begin{array}{l} \{1\} \quad P'(0) \\ \{2\} \quad \min(P') = \min(\lambda (n: \text{nat}): P'(n+1)) + 1 \end{array}}$$

Simplifying, rewriting, and recording with decision procedures,
 Using lemma min_def,
 Simplifying, rewriting, and recording with decision procedures,
 Expanding the definition of minimum?,
 Hiding formulas: 3,
 Repeatedly Skolemizing and flattening,
 Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of min_plus1.1.

min_plus1.2:

$$\frac{\{-1\} \quad \text{nonempty?}[\text{nat}](P')}{\begin{array}{l} \{1\} \quad \text{nonempty?}[\text{nat}](\lambda (n: \text{nat}): P'(1+n)) \\ \{2\} \quad P'(0) \\ \{3\} \quad \min(P') = \min(\lambda (n: \text{nat}): P'(n+1)) + 1 \end{array}}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of min_plus1.2.

min_plus1.3:

$$\frac{\{-1\} \quad \text{nonempty?}[\text{nat}](P')}{\begin{array}{l} \{1\} \quad \min[\text{nat}](P') - 1 \geq 0 \\ \{2\} \quad P'(0) \\ \{3\} \quad \min(P') = \min(\lambda (n: \text{nat}): P'(n+1)) + 1 \end{array}}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of min_plus1.3.

Q.E.D.

C.143.32 Number_Props.min_member

Terse proof for min_member.

min_member:

$$\frac{}{\{1\} \quad \forall (P: (\text{nonempty?}[\text{nat}])), n: \text{nat}: \min(P) = n \supset P(n)}$$

Repeatedly Skolemizing and flattening,
 Rewriting using min_def, matching in *,
 Expanding the definition of minimum?,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of min_member.
 Q.E.D.

C.144 Proofs for Ok_Result_Rewrite (state-transformer.pvs)

C.144.1 Ok_Result_Rewrite.ok_result_q_ok

Terse proof for ok_result_q_ok.

ok_result_q_ok:

$$\{1\} \quad \forall (\text{data: Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], s: \text{State}):$$

$$\text{OK?}[\text{State}, \text{Data1}]((q \ \#\# \ \text{ok_result}(\text{data}))(s)) = \text{OK?}(q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of ok_result_q_ok.

Q.E.D.

C.144.2 Ok_Result_Rewrite.ok_result_q_state_TCC1

Terse proof for ok_result_q_state_TCC1.

ok_result_q_state_TCC1:

$$\{1\} \quad \forall (\text{data: Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], s: \text{State}):$$

$$\text{OK?}(q(s)) \supset$$
$$\text{OK?}[\text{State}, \text{Data1}]$$
$$((\#\#[\text{State}, \text{Data2}, \text{Data1}](q, \text{ok_result}[\text{State}, \text{Data1}](\text{data}))(s))$$
$$\vee$$
$$\text{Exception?}[\text{State}, \text{Data1}]$$
$$((\#\#[\text{State}, \text{Data2}, \text{Data1}](q, \text{ok_result}[\text{State}, \text{Data1}](\text{data}))(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of ok_result_q_state_TCC1.

Q.E.D.

C.144.3 Ok_Result_Rewrite.ok_result_q_state_TCC2

Terse proof for ok_result_q_state_TCC2.

ok_result_q_state_TCC2:

$$\{1\} \quad \forall (q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], s: \text{State}):$$

$$\text{OK?}(q(s)) \supset \text{OK?}[\text{State}, \text{Data2}](q(s)) \vee \text{Exception?}[\text{State}, \text{Data2}](q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of ok_result_q_state_TCC2.

Q.E.D.

C.144.4 Ok_Result_Rewrite.ok_result_q_state

Terse proof for ok_result_q_state.

ok_result_q_state:

$$\frac{\{1\} \quad \forall (\text{data}: \text{Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]), s: \text{State}):}{\text{OK?}(q(s)) \supset \text{state}[\text{State}, \text{Data1}]((q \text{ ## } \text{ok_result}(\text{data}))(s)) = \text{state}(q(s))}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `ok_result_q_state`.

Q.E.D.

C.144.5 `Ok_Result_Rewrite.ok_result_q_data_TCC1`

Terse proof for `ok_result_q_data_TCC1`.

ok_result_q_data_TCC1:

$$\frac{\{1\} \quad \forall (\text{data}: \text{Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]), s: \text{State}):}{\text{OK?}(q(s)) \supset \text{OK?}[\text{State}, \text{Data1}]((\text{##}[\text{State}, \text{Data2}, \text{Data1}](q, \text{ok_result}[\text{State}, \text{Data1}](\text{data}))(s)))}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `ok_result_q_data_TCC1`.

Q.E.D.

C.144.6 `Ok_Result_Rewrite.ok_result_q_data`

Terse proof for `ok_result_q_data`.

ok_result_q_data:

$$\frac{\{1\} \quad \forall (\text{data1}: \text{Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]), s: \text{State}):}{\text{OK?}(q(s)) \supset \text{data}((q \text{ ## } \text{ok_result}(\text{data1}))(s)) = \text{data1}}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `ok_result_q_data`.

Q.E.D.

C.144.7 `Ok_Result_Rewrite.ok_result_elimination_1`

Terse proof for `ok_result_elimination_1`.

ok_result_elimination_1:

$$\frac{\{1\} \quad \forall (\text{data}: \text{Data1}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]):}{(\text{ok_result}[\text{State}, \text{Data1}](\text{data}) \text{ ## } q) = q}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `ok_result_elimination_1`.

Q.E.D.

C.145 Proofs for PDBR_Data_Model (paging-data-models.pvs)

C.145.1 PDBR_Data_Model.pdbr_valid?_TCC1

Terse proof for pdbr_valid?_TCC1.

pdbr_valid?_TCC1:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}]): \text{length}(\text{data}) = 4 \supset 1 < \text{length}[\text{Byte}](\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pdbr_valid?_TCC1.

Q.E.D.

C.145.2 PDBR_Data_Model.pdbr_valid?_TCC2

Terse proof for pdbr_valid?_TCC2.

pdbr_valid?_TCC2:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}]):$$
$$\text{cut_bits}(\text{nth}(\text{data}, 1), 0, 4) = 0 \wedge \text{length}(\text{data}) = 4 \supset 0 < \text{length}[\text{Byte}](\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pdbr_valid?_TCC2.

Q.E.D.

C.145.3 PDBR_Data_Model.pdbr_to_byte_TCC1

Terse proof for pdbr_to_byte_TCC1.

pdbr_to_byte_TCC1:

$$\{1\} \quad \forall (\text{pdbr}: \text{Pdbr_type}):$$
$$\text{overwrite_bool_bit}(\text{overwrite_bool_bit}(0, \text{pdbr}'\text{pwt}, 3), \text{pdbr}'\text{pcd}, 4) < \text{max_byte}$$

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every less_than_max_byte overwrite_bool_bit_less

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pdbr_to_byte_TCC1.

Q.E.D.

C.145.4 PDBR_Data_Model.pdbr_to_byte_TCC2

Terse proof for pdbr_to_byte_TCC2.

pdbr_to_byte_TCC2:

$$\{1\} \quad \forall (\text{pdbr}: \text{Pdbr_type}): \text{offset}(\text{pdbr}'\text{base_addr}) \geq 0$$

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pdbr_to_byte_TCC2.

Q.E.D.

C.145.5 PDBR_Data_Model.pdbr_to_byte_TCC3

Terse proof for `pdbr_to_byte_TCC3`.

`pdbr_to_byte_TCC3`:

$\{1\} \quad \forall (\text{pdbr}: \text{Pdbr_type}):$ $\quad \text{every}_{[\text{nat}]}$ $\quad \quad (\{s: \text{nat} \mid s < \text{max_byte}\})$ $\quad \quad \quad (:(\text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 8, 8),$ $\quad \quad \quad \quad \text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 16, 8),$ $\quad \quad \quad \quad \text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 24, 8):))$
--

Installing automatic rewrites from: `every cut_bits_below max_byte min_bits_per_byte bits_per_byte_minimum`

Repeatedly Skolemizing and flattening,

Using lemma `bits_per_byte_minimum`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

`pdbr_to_byte_TCC3.1`:

$\{-1\} \quad \text{bits_per_byte} \geq 8$	$\{1\} \quad \text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 24, 8) < \text{expt}(2, \text{bits_per_byte})$
--	--

Using lemma `cut_bits_below`,

Using lemma `both_sides_expt_gt1_le_aux`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pdbr_to_byte_TCC3.1`.

`pdbr_to_byte_TCC3.2`:

$\{-1\} \quad \text{bits_per_byte} \geq 8$	$\{1\} \quad \text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 16, 8) < \text{expt}(2, \text{bits_per_byte})$
--	--

Using lemma `cut_bits_below`,

Using lemma `both_sides_expt_gt1_le_aux`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pdbr_to_byte_TCC3.2`.

`pdbr_to_byte_TCC3.3`:

$\{-1\} \quad \text{bits_per_byte} \geq 8$	$\{1\} \quad \text{cut_bits}(\text{offset}(\text{pdbr}'\text{base_addr}), 8, 8) < \text{expt}(2, \text{bits_per_byte})$
--	---

Using lemma `cut_bits_below`,

Using lemma `both_sides_expt_gt1_le_aux`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pdbr_to_byte_TCC3.3`.

Q.E.D.

C.145.6 PDBR_Data_Model.pdbr_from_byte_TCC1

Terse proof for `pdbr_from_byte_TCC1`.

`pdbr_from_byte_TCC1`:

$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}): \text{pdbr_valid?}(\text{data}, a) \supset 1 < \text{length}[\text{Byte}](\text{data})$

Trying repeated skolemization, instantiation, and if-lifting,

C Proof scripts

This completes the proof of `pdbr_from_byte_TCC1`.

Q.E.D.

C.145.7 PDBR_Data_Model.pdbr_from_byte_TCC2

Terse proof for `pdbr_from_byte_TCC2`.

`pdbr_from_byte_TCC2`:

$$\frac{}{\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}): \text{pdbr_valid?}(\text{data}, a) \supset 2 < \text{length}[\text{Byte}](\text{data})}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pdbr_from_byte_TCC2`.

Q.E.D.

C.145.8 PDBR_Data_Model.pdbr_from_byte_TCC3

Terse proof for `pdbr_from_byte_TCC3`.

`pdbr_from_byte_TCC3`:

$$\frac{}{\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}): \text{pdbr_valid?}(\text{data}, a) \supset 3 < \text{length}[\text{Byte}](\text{data})}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pdbr_from_byte_TCC3`.

Q.E.D.

C.145.9 PDBR_Data_Model.pdbr_from_byte_TCC4

Terse proof for `pdbr_from_byte_TCC4`.

pdbr_from_byte_TCC4:

```

{1}  ∀ (data: list[Byte], a: Address):
      pdbr_valid?(data, a) ⊃
      Mem?(Mem(overwrite_shift_bits(overwrite_shift_bits(overwrite_shift_bits(0,
                                                                              nth[Byte](data, 1),
                                                                              8,
                                                                              8),
                                                                              nth[Byte](data, 2), 16, 8),
                                                                              nth[Byte](data, 3), 24, 8))'type_of)
      ^

                                                                              nth[Byte](data, 1),
                                                                              8,
                                                                              8),
                                                                              nth[Byte](data, 2),
                                                                              16,
                                                                              8),
                                                                              nth[Byte](data, 3), 24, 8))))

```

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: aligned_address? aligned_overwrite_shift_bits_more
aligned_overwrite_shift_bits_less aligned_zero max_linear_expt_val overwrite_shift_bits_less pde_valid?
max_linear_offset bus_width

Expanding the definition of Mem,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Rewriting using aligned_overwrite_shift_bits_more, matching in *,

Rewriting using aligned_overwrite_shift_bits_more, matching in *,

Rewriting using aligned_overwrite_shift_bits_less, matching in *,

Hiding formulas: 2, 3, 4,

C Proof scripts

Expanding the definition of `pdbr_valid?`,
Applying disjunctive simplification to flatten sequent,
Using lemma `cut_bits_aligned`,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of `pdbr_from_byte_TCC4`.
Q.E.D.

C.145.10 PDBR_Data_Model.pdbr_from_byte_TCC5

Terse proof for `pdbr_from_byte_TCC5`.

`pdbr_from_byte_TCC5`:

$$\frac{}{\{1\} \quad \forall (data: \text{list}[\text{Byte}], a: \text{Address}): \text{pdbr_valid?}(data, a) \supset 0 < \text{length}[\text{Byte}](data)}$$

Repeatedly Skolemizing and flattening,
Installing automatic rewrites from: `aligned_address?` `aligned_overwrite_shift_bits_more`
`aligned_overwrite_shift_bits_less` `aligned_zero` `max_linear_expt_val` `overwrite_shift_bits_less` `pde_valid?`
`max_linear_offset` `bus_width`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
Expanding the definition of `pdbr_valid?`,
which is trivially true.
This completes the proof of `pdbr_from_byte_TCC5`.
Q.E.D.

C.145.11 PDBR_Data_Model.pdbr_model_TCC1

Terse proof for `pdbr_model_TCC1`.

`pdbr_model_TCC1`:

$$\frac{}{\{1\} \quad \forall (f: [[\text{Pdbr_type}, \text{Address}] \rightarrow [\text{list}[\text{Byte}] \rightarrow \text{bool}]]): \\ (f = (\lambda (d: \text{Pdbr_type}, a: \text{Address}): (\text{zero_mask?}(4)))) \supset \\ (\forall (x_1: [\text{Pdbr_type}, \text{Address}]): \text{singleton?}[\text{list}[\text{Byte}]](f(x_1)))}$$

Repeatedly Skolemizing and flattening,
Replacing using formula -1,
Using lemma `singleton_zero_mask`,
Expanding the definition of `singleton?`,
which is trivially true.
This completes the proof of `pdbr_model_TCC1`.
Q.E.D.

C.145.12 PDBR_Data_Model.pdbr_valid_to_byte

Terse proof for `pdbr_valid_to_byte`.

`pdbr_valid_to_byte`:

$$\frac{}{\{1\} \quad \forall (d: \text{Pdbr_type}, a: \text{Address}): \\ \text{valid?}(\text{uidt}(\text{pdbr_model}))(\text{to_byte}(\text{pdbr_model})(d, a), a)}$$

Repeatedly Skolemizing and flattening,
Installing automatic rewrites from: `pdbr_model` `pdbr_to_byte` `pdbr_valid?` `nth` `length` `cut_bits_zero`
`cut_bits_overwrite_bool_bit_disjoined` `cut_bits_overwrite_bits_disjoined` `cut_bits_cut_bits`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Adding type constraints for d!1'base_addr,
 Using lemma aligned_cut_bits,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of pabr_valid_to_byte.
 Q.E.D.

C.145.13 PDBR_Data_Model.pabr_is_pod

Terse proof for pabr_is_pod.

pabr_is_pod:

$$\frac{}{\{1\} \text{ pod_data_type?}(\text{pabr_model})}$$

Expanding the definition of pod_data_type?,
 Expanding the definition of interpreted_data_type?,
 Expanding the definition of uninterpreted_data_type?,
 Applying propositional simplification,
 we get 6 subgoals:

pabr_is_pod.1:

$$\frac{}{\{1\} \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \neg \text{length}(l) = \text{size}(\text{pabr_model}'\text{uidt}) \supset \neg \text{valid?}(\text{pabr_model}'\text{uidt})(l, a)}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pabr_model,
 Expanding the definition of pabr_valid?,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of pabr_is_pod.1.

pabr_is_pod.2:

$$\frac{}{\{1\} \forall (d: \text{Pdbr_type}, a: \text{Address}): \text{valid?}(\text{uidt}(\text{pabr_model}))(\text{to_byte}(\text{pabr_model})(d, a), a)}$$

Applying pabr_valid_to_byte
 which is trivially true.
 This completes the proof of pabr_is_pod.2.

pabr_is_pod.3:

$$\frac{}{\{1\} \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \text{valid?}(\text{uidt}(\text{pabr_model}))(l, a) \equiv \text{up?}(\text{from_byte}(\text{pabr_model})(l, a))}$$

Repeatedly Skolemizing and flattening,
 Hiding formulas: -1,
 Expanding the definition of pabr_model,
 Expanding the definition of pabr_from_byte,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pabr_is_pod.3.

pabr_is_pod.4:

$$\frac{}{\{1\} \forall (d: \text{Pdbr_type}, a: \text{Address}): \text{down}(\text{from_byte}(\text{pabr_model})(\text{to_byte}(\text{pabr_model})(d, a), a)) = d}$$

C Proof scripts

Repeatedly Skolemizing and flattening,

Using lemma `pdbr_valid_to_byte`,

Installing automatic rewrites from: `pdbr_model` `pdbr_to_byte` `pdbr_from_byte` `pdbr_valid?`
`nth` `length` `cut_bits_overwrite_bool_bit_disjoined` `cut_bits_zero` `cut_bits_overwrite_bits_disjoined`
`cut_bits_cut_bits` `cut_bits_overwrite_bits_contained` `cut_bit_overwrite_bool_bit` `overwrite_shift_bits_zero`
`overwrite_shift_bits_merge` `aligned_address_aligned`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Adding type constraints for `d!1'base_addr`,

Expanding the definition of `max_linear_offset`,

Expanding the definition of `bus_width`,

Rewriting using `shift_bits_left_cut_bits`, matching in `*`,

we get 2 subgoals:

`pdbr_is_pod.4.1:`

$$\begin{array}{l|l}
 \{-1\} & \text{Mem?}(d' \text{'base_addr' type_of}) \\
 \{-2\} & 0 \leq d' \text{'base_addr' offset} \\
 \{-3\} & d' \text{'base_addr' offset} < \text{expt}(2, 32) \\
 \{-4\} & \text{aligned?}(12)(\text{offset}(d' \text{'base_addr})) \\
 \{-5\} & \text{cut_bits}(\text{offset}(d' \text{'base_addr}), 8, 4) = 0 \\
 \hline
 \{1\} & (\# \text{base_addr} := \text{Mem}(\text{offset}(d' \text{'base_addr})), \text{pcd} := d' \text{'pcd}, \text{pwt} := d' \text{'pwt\#}) = d'
 \end{array}$$

Applying extensionality,

Applying extensionality,

we get 2 subgoals:

`pdbr_is_pod.4.1.1:`

$$\begin{array}{l|l}
 \{-1\} & \text{Mem?}(d' \text{'base_addr' type_of}) \\
 \{-2\} & 0 \leq d' \text{'base_addr' offset} \\
 \{-3\} & d' \text{'base_addr' offset} < \text{expt}(2, 32) \\
 \{-4\} & \text{aligned?}(12)(\text{offset}(d' \text{'base_addr})) \\
 \{-5\} & \text{cut_bits}(\text{offset}(d' \text{'base_addr}), 8, 4) = 0 \\
 \hline
 \{1\} & \text{Mem}(\text{offset}(d' \text{'base_addr})) \text{'offset} = d' \text{'base_addr' offset}
 \end{array}$$

Expanding the definition of `Mem`,

which is trivially true.

This completes the proof of `pdbr_is_pod.4.1.1`.

`pdbr_is_pod.4.1.2:`

$$\begin{array}{l|l}
 \{-1\} & \text{Mem?}(d' \text{'base_addr' type_of}) \\
 \{-2\} & 0 \leq d' \text{'base_addr' offset} \\
 \{-3\} & d' \text{'base_addr' offset} < \text{expt}(2, 32) \\
 \{-4\} & \text{aligned?}(12)(\text{offset}(d' \text{'base_addr})) \\
 \{-5\} & \text{cut_bits}(\text{offset}(d' \text{'base_addr}), 8, 4) = 0 \\
 \hline
 \{1\} & \text{Mem}(\text{offset}(d' \text{'base_addr})) \text{'type_of} = d' \text{'base_addr' type_of}
 \end{array}$$

Expanding the definition of `Mem`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `pdbr_is_pod.4.1.2`.

pdbr_is_pod.4.2:

{-1}	Mem?(d'base_addr'type_of)
{-2}	$0 \leq d'base_addr\ offset$
{-3}	$d'base_addr\ offset < \text{expt}(2, 32)$
{-4}	aligned?(12)(offset(d'base_addr))
{-5}	cut_bits(offset(d'base_addr), 8, 4) = 0
{1}	aligned?(8)(offset(d'base_addr))
{2}	(#base_addr := Mem(shift_bits_left(cut_bits(offset(d'base_addr), 8, 24), 8)), pcd := d'pcd, pwt := d'pwt#) = d'

Applying aligned_bigger

Instantiating the top quantifier in -1 with the terms: offset(d'base_addr), 12, 8,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of pdbr_is_pod.4.2.

pdbr_is_pod.5:

{1}	$\forall (l: \text{list}[\text{Byte}], a_1, a_2: \text{Address}):$ valid?(uidt(pdbr_model))(l, a ₁) \equiv valid?(uidt(pdbr_model))(l, a ₂)
-----	--

Expanding the definition of pdbr_model,

Expanding the definition of pdbr_valid?,

which is trivially true.

This completes the proof of pdbr_is_pod.5.

pdbr_is_pod.6:

{1}	size(uidt(pdbr_model)) > 0
-----	----------------------------

Expanding the definition of pdbr_model,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pdbr_is_pod.6.

Q.E.D.

C.146 Proofs for PDBR_Datatype (paging-data.pvs)

C.146.1 PDBR_Datatype.pdbr_data_type_TCC1

Terse proof for pdbr_data_type_TCC1.

pdbr_data_type_TCC1:

{1}	$\exists (x: (\text{pod_data_type?}[\text{Pdbr_type}])): \text{TRUE}$
-----	--

Using lemma pdbr_data_type_exists,

pde_valid?_TCC1:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}]): \text{length}(\text{data}) = 4 \supset 0 < \text{length}[\text{Byte}] (\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pde_valid?_TCC1.

Q.E.D.

C.149.2 PDE_Model.pde_valid?_TCC2

Terse proof for pde_valid?_TCC2.

pde_valid?_TCC2:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}]): \\ \text{cut_bit}(\text{nth}(\text{data}, 0), 7) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \wedge \text{length}(\text{data}) = 4 \supset \\ 1 < \text{length}[\text{Byte}] (\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pde_valid?_TCC2.

Q.E.D.

C.149.3 PDE_Model.pde_valid?_TCC3

Terse proof for `pde_valid?_TCC3`.

`pde_valid?_TCC3`:

{1}	$\forall (\text{data: list[Byte]}):$ $\text{cut_bits}(\text{nth}(\text{data}, 1), 5, 3) = 0 \wedge$ $\text{cut_bit}(\text{nth}(\text{data}, 0), 7) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \wedge \text{length}(\text{data}) = 4$ $\supset 2 < \text{length}[Byte](\text{data})$
-----	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pde_valid?_TCC3`.

Q.E.D.

C.149.4 PDE_Model.pde_pte_to_byte_TCC1

Terse proof for `pde_pte_to_byte_TCC1`.

`pde_pte_to_byte_TCC1`:

{1}	$\forall (\text{pde: Pde_pt_type}):$ $\text{overwrite_bool_bit}(\text{overwrite_bool_bit}(\text{overwrite_bool_bit}(\text{overwrite_bool_bit}$ <div style="text-align: right; margin-right: 20px;"> $(\text{overwrite_bool_bit}$ $(\text{overwrite_bool_bit}$ $(0, \text{TRUE}, 0),$ mem- </div> $\text{ory_access_to_bools}$ <div style="text-align: right; margin-right: 20px;"> $(\text{pde}'\text{access})'1,$ $1),$ mem- </div> $\text{ory_privilege_to_bool}$ <div style="text-align: right; margin-right: 20px;"> $(\text{pde}'\text{privilege}),$ $2),$ $\text{pde}'\text{write_through},$ $3),$ $\text{pde}'\text{cache_disabled}, 4),$ </div> $\text{pde}'\text{accessed}, 5)$ $< \text{max_byte}$
-----	---

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: `every less_than_max_byte overwrite_bool_bit_less overwrite_shift_bits_less`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pde_pte_to_byte_TCC1`.

Q.E.D.

C.149.5 PDE_Model.pde_pte_to_byte_TCC2

Terse proof for `pde_pte_to_byte_TCC2`.

C Proof scripts

`pde_pte_to_byte_TCC2`:

$$\{1\} \quad \forall (pde: Pde_pt_type): \text{offset}(pde'page_table_base) \geq 0$$

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pde_pte_to_byte_TCC2`.

Q.E.D.

C.149.6 PDE_Model.pde_pte_to_byte_TCC3

Terse proof for `pde_pte_to_byte_TCC3`.

`pde_pte_to_byte_TCC3`:

$$\{1\} \quad \forall (pde: Pde_pt_type):$$
$$\text{every}_{[\text{nat}]}$$
$$(\{s: \text{nat} \mid s < \text{max_byte}\})$$
$$((:\text{overwrite_shift_bits}(\text{overwrite_bool_bit}(0, pde'global_page, 0),$$
$$\text{cut_bits}(\text{offset}(pde'page_table_base), 12, 4), 4, 4),$$
$$\text{cut_bits}(\text{offset}(pde'page_table_base), 16, 8),$$
$$\text{cut_bits}(\text{offset}(pde'page_table_base), 24, 8):))$$

Installing automatic rewrites from: `cut_bits_byte every`

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: `every less_than_max_byte overwrite_bool_bit_less overwrite_shift_bits_less`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pde_pte_to_byte_TCC3`.

Q.E.D.

C.149.7 PDE_Model.pde_super_to_byte_TCC1

Terse proof for `pde_super_to_byte_TCC1`.

pde_super_to_byte_TCC1:

<p>{1} \forall (spage: Pde_4m_type):</p> <p style="padding-left: 20px;"> overwrite_bool_bit(overwrite_bool_bit(overwrite_bool_bit(overwrite_bool_bit (overwrite_bool_bit (overwrite_bool_bit (overwrite_bool_bit (overwrite_bool_bit (0, TRUE, 0), mem- (spage' access)' 1, 1), mem- (spage' privilege), 2), spage' write_through, 3), spage' cache_disabled, 4), spage' accessed, 5), spage' dirty, 6), TRUE, 7) < max_byte </p>	
---	--

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: every less_than_max_byte overwrite_bool_bit_less over-
 write_shift_bits_less shift_bits_left_less
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pde_super_to_byte_TCC1.
 Q.E.D.

C.149.8 PDE_Model.pde_super_to_byte_TCC2

Terse proof for pde_super_to_byte_TCC2.
 pde_super_to_byte_TCC2:

<p>{1} \forall (spage: Pde_4m_type): offset(spage'page_base) \geq 0</p>	
---	--

Repeatedly Skolemizing and flattening,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pde_super_to_byte_TCC2.
 Q.E.D.

C.149.9 PDE_Model.pde_super_to_byte_TCC3

Terse proof for pde_super_to_byte_TCC3.

pde_super_to_byte_TCC3:

<pre>{1} ∃ (spage: Pde_4m_type): every [nat] ({s: nat s < max_byte}) ((:overwrite_bool_bit(overwrite_bool_bit(0, spage'global_page, 0), spage'page_table_attribute_index, 4), shift_bits_left(cut_bits(offset(spage'page_base), 22, 2), 6), cut_bits(offset(spage'page_base), 24, 8):))</pre>

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: every less_than_max_byte overwrite_bool_bit_less cut_bits_byte
 overwrite_shift_bits_less

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Expanding the definition of shift_bits_left,
 Using lemma cut_bits_below,
 Expanding the definition of max_byte,
 Using lemma bits_per_byte_minimum,
 Expanding the definition of min_bits_per_byte,
 Using lemma both_sides_expt_gt1_le_aux,
 we get 2 subgoals:

pde_super_to_byte_TCC3.1:

<pre>{-1} expt(2, 7 + 1) ≤ expt(2, bits_per_byte - 1 + 1) ≡ 7 ≤ bits_per_byte - 1 {-2} bits_per_byte ≥ 8 {-3} cut_bits(offset(spage'page_base), 22, 2) < expt(2, 2)</pre>
<pre>{1} cut_bits(offset(spage'page_base), 22, 2) × expt(2, 6) < expt(2, bits_per_byte)</pre>

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma expt_plus_aux,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of pde_super_to_byte_TCC3.1.

pde_super_to_byte_TCC3.2:

<pre>{-1} bits_per_byte ≥ 8 {-2} cut_bits(offset(spage'page_base), 22, 2) < expt(2, 2)</pre>
<pre>{1} bits_per_byte - 1 ≥ 0 {2} cut_bits(offset(spage'page_base), 22, 2) × expt(2, 6) < expt(2, bits_per_byte)</pre>

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pde_super_to_byte_TCC3.2.

Q.E.D.

C.149.10 PDE_Model.pde_to_byte_TCC1

Terse proof for pde_to_byte_TCC1.

pde_to_byte_TCC1:

<pre>{1} ∃ (pde: Pde_type): pde = Not_present ⊃ 0 < max_byte</pre>
--

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: every less_than_max_byte expt_2_8

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of pde_to_byte_TCC1.
Q.E.D.

C.149.11 PDE_Model.pde_to_byte_TCC2

Terse proof for pde_to_byte_TCC2.

pde_to_byte_TCC2:

$\{1\} \quad \forall (\text{pde: Pde_type}):$ $\text{pde} = \text{Not_present} \supset$ $\text{every}[\text{real}]$ $(\lambda (x: \text{real}): \text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte})$ $((:0, 0, 0:))$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of pde_to_byte_TCC2.
Q.E.D.

C.149.12 PDE_Model.pde_4m_from_byte_TCC1

Terse proof for pde_4m_from_byte_TCC1.

pde_4m_from_byte_TCC1:

$\{1\} \quad \forall (\text{data: list}[\text{Byte}], a: \text{Address}): \text{pde_valid?}(\text{data}, a) \supset 0 < \text{length}[\text{Byte}](\text{data})$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of pde_4m_from_byte_TCC1.
Q.E.D.

C.149.13 PDE_Model.pde_4m_from_byte_TCC2

Terse proof for pde_4m_from_byte_TCC2.

pde_4m_from_byte_TCC2:

$\{1\} \quad \forall (\text{data: list}[\text{Byte}], a: \text{Address}):$ $\text{pde_valid?}(\text{data}, a) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 7) \supset$ $((\text{singleton} [\text{Memory_access}] (\text{Read}) \cup \{\text{Execute}\}) \subseteq \text{bools_to_memory_access}(\text{cut_bit}(\text{nth} [\text{Byte}](\text{data}, 0),$
--

Trying repeated skolemization, instantiation, and if-lifting,

Terse proof for pde_model_TCC1.

pde_model_TCC1:

$$\{1\} \quad \forall (f: [[Pde_type, \text{Address}] \rightarrow [\text{list}[\text{Byte}] \rightarrow \text{bool}]]):$$

$$(f = (\lambda (d: Pde_type, a: \text{Address}): (\text{zero_mask}?(4)))) \supset$$

$$(\forall (x_1: [Pde_type, \text{Address}]): \text{singleton}?[[\text{list}[\text{Byte}]]](f(x_1)))$$

Repeatedly Skolemizing and flattening,
 Replacing using formula -1,
 Using lemma singleton_zero_mask,

C Proof scripts

Expanding the definition of singleton?,
which is trivially true.
This completes the proof of `pde_model_TCC1`.
Q.E.D.

C.149.26 PDE_Model.pde_valid_to_byte

The \LaTeX code for this proof is broken.

C.149.27 PDE_Model.pde_is_pod

Terse proof for `pde_is_pod`.

`pde_is_pod`:

$$\{1\} \quad \text{pod_data_type?}(\text{pde_model})$$

Expanding the definition of `pod_data_type?`,
Expanding the definition of `interpreted_data_type?`,
Expanding the definition of `uninterpreted_data_type?`,
Applying propositional simplification,
we get 6 subgoals:

`pde_is_pod.1`:

$$\{1\} \quad \forall (l: \text{list}[\text{Byte}], a: \text{Address}):$$
$$\neg \text{length}(l) = \text{size}(\text{pde_model}'\text{uidt}) \supset \neg \text{valid?}(\text{pde_model}'\text{uidt})(l, a)$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `pde_model`,
Expanding the definition of `pde_valid?`,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of `pde_is_pod.1`.

`pde_is_pod.2`:

$$\{1\} \quad \forall (d: \text{Pde_type}, a: \text{Address}): \text{valid?}(\text{uidt}(\text{pde_model}))(\text{to_byte}(\text{pde_model})(d, a), a)$$

Repeatedly Skolemizing and flattening,
Rewriting using `pde_valid_to_byte`, matching in *,
This completes the proof of `pde_is_pod.2`.

`pde_is_pod.3`:

$$\{1\} \quad \forall (l: \text{list}[\text{Byte}], a: \text{Address}):$$
$$\text{valid?}(\text{uidt}(\text{pde_model}))(l, a) \equiv \text{up?}(\text{from_byte}(\text{pde_model}))(l, a)$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `pde_model`,
Expanding the definition of `pde_from_byte`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `pde_is_pod.3`.

pde_is_pod.4:

$$\frac{}{\{1\} \quad \forall (d: \text{Pde_type}, a: \text{Address}): \quad \text{down}(\text{from_byte}(\text{pde_model}))(\text{to_byte}(\text{pde_model})(d, a), a) = d}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pde_model,
 Expanding the definition of pde_to_byte,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 we get 3 subgoals:

pde_is_pod.4.1:

$$\frac{\{-1\} \quad \text{not_present?}(d')}{\{1\} \quad \text{down}(\text{pde_from_byte}(:0, 0, 0, 0), a') = d'}$$

Installing automatic rewrites from: pde_from_byte! pde_valid? nth length length_cdr
 length_is_cons cut_bits_overwrite_bool_bit_disjoined cut_bits_zero cut_bits_overwrite_bits_disjoined
 cut_bits_cut_bits cut_bits_overwrite_bits_contained cut_bit_overwrite_bool_bit overwrite_shift_bits_zero
 overwrite_shift_bits_merge aligned_address_aligned cut_bit_cut_bits cut_bit_overwrite_shift_bits
 length_to_byte from_byte_to_byte valid_to_byte cut_bit_zero

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pde_is_pod.4.1.

pde_is_pod.4.2:

$$\frac{\{-1\} \quad \text{pde_pt?}(d')}{\{1\} \quad \text{down}(\text{pde_from_byte}(\text{pde_pte_to_byte}(\text{pde_pt}(d'), a'), a')) = d'}$$

Installing automatic rewrites from: pde_pte_to_byte! pde_4k_from_byte pde_from_byte!

This completes the proof of pf_ec_valid?_TCC4.

Q.E.D.

C.150.5 PF_EC_Model.pf_ec_to_byte_TCC1

Terse proof for pf_ec_to_byte_TCC1.

pf_ec_to_byte_TCC1:

{1}	\forall (pf_ec: PF_error_code_type):	
	$\text{overwrite_bool_bit}(\text{overwrite_bool_bit}(\text{overwrite_bool_bit}(\text{overwrite_bool_bit}$	
		$(\text{overwrite_bool_bit}$
		$(0, \text{pf_ec}'\text{present}, 0),$
		$(\text{Write} \in \text{pf_ec}'\text{access}),$
		$1),$
	$\text{ory_privilege_to_bool}$	mem-
		$(\text{pf_ec}'\text{privilege}),$
		$2),$
		$\text{pf_ec}'\text{reserved_bit_violation}, 3),$
	$(\text{Execute} \in \text{pf_ec}'\text{access}), 4)$	
	$< \text{max_byte}$	

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every less_than_max_byte overwrite_bool_bit_less

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pf_ec_to_byte_TCC1.

Q.E.D.

C.150.6 PF_EC_Model.pf_ec_to_byte_TCC2

Terse proof for pf_ec_to_byte_TCC2.

pf_ec_to_byte_TCC2:

{1}	\forall (pf_ec: PF_error_code_type):	
	$\text{every}[\text{real}]$	
	$(\lambda (x: \text{real}): \text{rational_pred}(x) \wedge \text{integer_pred}(x) \wedge x \geq 0 \wedge x < \text{max_byte})$	
	$((:0, 0, 0:))$	

Expanding the definition of max_byte,

Adding type constraints for expt(2, bits_per_byte),

Installing automatic rewrites from: every

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pf_ec_to_byte_TCC2.

Q.E.D.

C.150.7 PF_EC_Model.pf_ec_from_byte_TCC1

Terse proof for pf_ec_from_byte_TCC1.

pf_ec_from_byte_TCC1:

{1}	\forall (data: list[Byte], a: Address): pf_ec_valid?(data, a) \supset $0 < \text{length}[\text{Byte}](\text{data})$	
-----	---	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pf_ec_from_byte_TCC1.

Q.E.D.

C.150.8 PF_EC_Model.pf_ec_from_byte_TCC2

Terse proof for pf_ec_from_byte_TCC2.

pf_ec_from_byte_TCC2:

$$\{1\} \quad \forall (data: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{pf_ec_valid?}(data, a) \supset$$

$$(\text{Read} \in \text{bools_to_memory_access}(\text{cut_bit}(\text{nth}[\text{Byte}](data, 0), 1), \text{cut_bit}(\text{nth}[\text{Byte}](data, 0))))$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of every,
 Expanding the definition of bools_to_memory_access,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of pf_ec_from_byte_TCC2.

Q.E.D.

C.150.9 PF_EC_Model.pf_ec_model_TCC1

Terse proof for pf_ec_model_TCC1.

pf_ec_model_TCC1:

$$\{1\} \quad \forall (f: [[\text{PF_error_code_type}, \text{Address}] \rightarrow [\text{list}[\text{Byte}] \rightarrow \text{bool}]]):$$

$$(f = (\lambda (d: \text{PF_error_code_type}, a: \text{Address}): (\text{zero_mask?}(4)))) \supset$$

$$(\forall (x_1: [\text{PF_error_code_type}, \text{Address}]): \text{singleton?}[\text{list}[\text{Byte}]](f(x_1)))$$

Repeatedly Skolemizing and flattening,
 Replacing using formula -1,
 Using lemma singleton_zero_mask,
 Expanding the definition of singleton?,
 which is trivially true.
 This completes the proof of pf_ec_model_TCC1.

Q.E.D.

C.150.10 PF_EC_Model.pf_ec_valid_to_byte

Terse proof for pf_ec_valid_to_byte.

pf_ec_valid_to_byte:

$$\{1\} \quad \forall (d: \text{PF_error_code_type}, a: \text{Address}):$$

$$\text{valid?}(\text{uidt}(\text{pf_ec_model}))(\text{to_byte}(\text{pf_ec_model})(d, a), a)$$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: pf_ec_model pf_ec_to_byte pf_ec_valid? nth length cut_bits_zero
 cut_bits_overwrite_bool_bit_disjoined cut_bits_overwrite_bits_disjoined cut_bits_cut_bits
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pf_ec_valid_to_byte.

Q.E.D.

C.150.11 PF_EC_Model.pf_ec_is_pod

Terse proof for pf_ec_is_pod.

pf_ec_is_pod:

$$\frac{}{\{1\} \text{ pod_data_type?}(pf_ec_model)}$$

Expanding the definition of pod_data_type?,
 Expanding the definition of interpreted_data_type?,
 Expanding the definition of uninterpreted_data_type?,
 Applying propositional simplification,
 we get 6 subgoals:

pf_ec_is_pod.1:

$$\frac{}{\{1\} \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \neg \text{length}(l) = \text{size}(pf_ec_model'uidt) \supset \neg \text{valid?}(pf_ec_model'uidt)(l, a)}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pf_ec_model,
 Expanding the definition of pf_ec_valid?,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of pf_ec_is_pod.1.

pf_ec_is_pod.2:

$$\frac{}{\{1\} \forall (d: \text{PF_error_code_type}, a: \text{Address}): \text{valid?}(uidt(pf_ec_model))(to_byte(pf_ec_model)(d, a), a)}$$

Repeatedly Skolemizing and flattening,
 Rewriting using pf_ec_valid_to_byte, matching in *,
 This completes the proof of pf_ec_is_pod.2.

pf_ec_is_pod.3:

$$\frac{}{\{1\} \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \text{valid?}(uidt(pf_ec_model))(l, a) \equiv \text{up?}(\text{from_byte}(pf_ec_model)(l, a))}$$

Repeatedly Skolemizing and flattening,
 Hiding formulas: -1,
 Expanding the definition of pf_ec_model,
 Expanding the definition of pf_ec_from_byte,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pf_ec_is_pod.3.

pf_ec_is_pod.4:

$$\frac{}{\{1\} \forall (d: \text{PF_error_code_type}, a: \text{Address}): \text{down}(\text{from_byte}(pf_ec_model)(to_byte(pf_ec_model)(d, a), a)) = d}$$

Repeatedly Skolemizing and flattening,
 Using lemma pf_ec_valid_to_byte,
 Installing automatic rewrites from: pf_ec_model pf_ec_to_byte pf_ec_from_byte pf_ec_valid? nth length
 cut_bits_overwrite_bool_bit_disjoined cut_bits_zero cut_bits_overwrite_bits_disjoined cut_bits_cut_bits
 cut_bits_overwrite_bits_contained cut_bit_overwrite_bool_bit bool_to_memory_access_iso bool_to_memory_privilege_iso
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Applying decompose-equality,
 Expanding the definition of bools_to_memory_access,
 Keeping (1) and hiding *,

Adding type constraints for d!l'access,
 Applying extensionality,
 Hiding formulas: 2,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `pf_ec_is_pod.4`.
`pf_ec_is_pod.5`:

{1}	$\forall (l: \text{list}[\text{Byte}], a_1, a_2: \text{Address}):$ $\text{valid?}(\text{uidt}(\text{pf_ec_model}))(l, a_1) \equiv \text{valid?}(\text{uidt}(\text{pf_ec_model}))(l, a_2)$
-----	--

Expanding the definition of `pf_ec_model`,
 Expanding the definition of `pf_ec_valid?`,
 which is trivially true.
 This completes the proof of `pf_ec_is_pod.5`.
`pf_ec_is_pod.6`:

{1}	$\text{size}(\text{uidt}(\text{pf_ec_model})) > 0$
-----	--

Expanding the definition of `pf_ec_model`,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `pf_ec_is_pod.6`.
 Q.E.D.

C.151 Proofs for PF_Error_Code_Type (paging-data.pvs)

C.151.1 PF_Error_Code_Type.pf_ec_data_type_TCC1

Terse proof for `pf_ec_data_type_TCC1`.
`pf_ec_data_type_TCC1`:

{1}	$\exists (x: (\text{pod_data_type?}[\text{PF_error_code_type}])): \text{TRUE}$
-----	---

Using lemma `pf_ec_type_exists`,
 This completes the proof of `pf_ec_data_type_TCC1`.
 Q.E.D.

C.152 Proofs for PTE_Datatype (paging-data.pvs)

C.152.1 PTE_Datatype.pte_data_type_TCC1

Terse proof for `pte_data_type_TCC1`.
`pte_data_type_TCC1`:

{1}	$\exists (x: (\text{pod_data_type?}[\text{Pte_type}])): \text{TRUE}$
-----	---

Using lemma `pte_data_type_exists`,
 This completes the proof of `pte_data_type_TCC1`.
 Q.E.D.

C.153 Proofs for PTE_Model (paging-data-models.pvs)

C.153.1 PTE_Model.pte_page_to_byte_TCC1

Terse proof for pte_page_to_byte_TCC1.

pte_page_to_byte_TCC1:

<p>{1} \forall (pte: Pte_4k_type):</p> <p> overwrite_bool_bit(overwrite_bool_bit(overwrite_bool_bit(overwrite_bool_bit</p> <p> ory_access_to_bools</p> <p> ory_privilege_to_bool</p> <p> < max_byte</p>	<p>(overwrite_bool_bit</p> <p> (overwrite_bool_bit</p> <p> (overwrite_bool_bit</p> <p> (overwrite_bool_bit</p> <p> (0, TRUE, 0),</p> <p> mem-</p> <p> (pte'access)'1,</p> <p> 1),</p> <p> mem-</p> <p> (pte'privilege),</p> <p> 2),</p> <p> pte'write_through,</p> <p> 3),</p> <p> pte'cache_disabled,</p> <p> 4),</p> <p> pte'accessed,</p> <p> 5),</p> <p> pte'dirty, 6),</p> <p> pte'page_table_attribute_index, 7)</p>
---	--

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every less_than_max_byte overwrite_bool_bit_less overwrite_shift_bits_less max_linear_offset bus_width

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pte_page_to_byte_TCC1.

Q.E.D.

C.153.2 PTE_Model.pte_page_to_byte_TCC2

Terse proof for pte_page_to_byte_TCC2.

pte_page_to_byte_TCC2:

<p>{1} \forall (pte: Pte_4k_type):</p>	<p>offset(pte'page_base) \geq 0</p>
---	--

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pte_page_to_byte_TCC2.

Q.E.D.

C.153.3 PTE_Model.pte_page_to_byte_TCC3

Terse proof for pte_page_to_byte_TCC3.

pte_page_to_byte_TCC3:

```
{1}  ∃ (pte: Pte_4k_type):
      every[nat]
        ({s: nat | s < max_byte})
        ((:overwrite_shift_bits(overwrite_bool_bit(0, pte'global_page, 0),
                                         cut_bits(offset(pte'page_base), 12, 4), 4, 4),
          cut_bits(offset(pte'page_base), 16, 8),
          cut_bits(offset(pte'page_base), 24, 8):))
```

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every less_than_max_byte cut_bits_byte overwrite_bool_bit_less overwrite_shift_bits_less

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pte_page_to_byte_TCC3.

Q.E.D.

C.153.4 PTE_Model.pte_to_byte_TCC1

Terse proof for pte_to_byte_TCC1.

pte_to_byte_TCC1:

```
{1}  ∃ (pte: Pte_type): pte = Not_present ⊃ 0 < max_byte
```

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every less_than_max_byte expt_2_8

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pte_to_byte_TCC1.

Q.E.D.

C.153.5 PTE_Model.pte_to_byte_TCC2

Terse proof for pte_to_byte_TCC2.

pte_to_byte_TCC2:

```
{1}  ∃ (pte: Pte_type):
      pte = Not_present ⊃
      every[real]
        (λ (x: real): rational_pred(x) ∧ integer_pred(x) ∧ x ≥ 0 ∧ x < max_byte)
        ((:0, 0, 0:))
```

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: every

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of max_byte,

Adding type constraints for expt(2, bits_per_byte),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pte_to_byte_TCC2.

Q.E.D.

C.153.6 PTE_Model.pte_page_from_byte_TCC1

Terse proof for `pte_page_from_byte_TCC1`.

`pte_page_from_byte_TCC1`:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}): \text{pte_valid?}(\text{data}, a) \supset 0 < \text{length}[\text{Byte}](\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pte_page_from_byte_TCC1`.

Q.E.D.

C.153.7 PTE_Model.pte_page_from_byte_TCC2

Terse proof for `pte_page_from_byte_TCC2`.

`pte_page_from_byte_TCC2`:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{pte_valid?}(\text{data}, a) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \supset$$

$$((\text{singleton} [\text{Memory_access}](\text{Read}) \cup \{\text{Execute}\}) \subseteq \text{bools_to_memory_access}(\text{cut_bit}(\text{nth} [\text{Byte}](\text{data}, 0),$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pte_page_from_byte_TCC2`.

Q.E.D.

C.153.8 PTE_Model.pte_page_from_byte_TCC3

Terse proof for `pte_page_from_byte_TCC3`.

`pte_page_from_byte_TCC3`:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{pte_valid?}(\text{data}, a) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \supset 1 < \text{length}[\text{Byte}](\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pte_page_from_byte_TCC3`.

Q.E.D.

C.153.9 PTE_Model.pte_page_from_byte_TCC4

Terse proof for `pte_page_from_byte_TCC4`.

`pte_page_from_byte_TCC4`:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{pte_valid?}(\text{data}, a) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \supset 2 < \text{length}[\text{Byte}](\text{data})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pte_page_from_byte_TCC4`.

Q.E.D.

C.153.10 PTE_Model.pte_page_from_byte_TCC5

Terse proof for `pte_page_from_byte_TCC5`.

`pte_page_from_byte_TCC5`:

$$\{1\} \quad \forall (\text{data}: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{pte_valid?}(\text{data}, a) \wedge \text{cut_bit}(\text{nth}(\text{data}, 0), 0) \supset 3 < \text{length}[\text{Byte}](\text{data})$$

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: `every aligned_address?` `aligned_overwrite_shift_bits_more` `aligned_overwrite_shift_bits_less` `aligned_zero` `max_linear_expt_val` `overwrite_shift_bits_less` `pte_valid?` `max_linear_offset` `bus_width`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `pte_page_from_byte_TCC5`.

Q.E.D.

C.153.11 PTE_Model.pte_page_from_byte_TCC6

Terse proof for `pte_page_from_byte_TCC6`.

pte_page_from_byte_TCC6:

```

{1}  ∀ (data: list[Byte], a: Address):
      pte_valid?(data, a) ∧ cut_bit(nth(data, 0), 0) ⊃
      Mem?(Mem(overwrite_shift_bits(overwrite_shift_bits(overwrite_shift_bits(0,
                                                                                               cut_bits
                                                                                               (nth[Byte]
                                                                                               (data, 1),

 This completes the proof of pte_page_from_byte_TCC6.
 Q.E.D.

C.153.12 PTE_Model.pte_from_byte_TCC1

Terse proof for pte_from_byte_TCC1.

pte_from_byte_TCC1:

$$\{1\} \quad \forall (data: \text{list}[\text{Byte}], a: \text{Address}):$$

$$\text{cut_bit}(\text{nth}(data, 0), 0) \wedge \text{pte_valid?}(data, a) \supset$$

$$\text{up?}[\text{Pte_4k_type}](\text{pte_page_from_byte}(data, a))$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of pte_from_byte_TCC1.
 Q.E.D.

C.153.13 PTE_Model.pte_model_TCC1

Terse proof for pte_model_TCC1.

pte_model_TCC1:

$$\{1\} \quad \forall (f: [[\text{Pte_type}, \text{Address}] \rightarrow [\text{list}[\text{Byte}] \rightarrow \text{bool}]]):$$

$$(f = (\lambda (d: \text{Pte_type}, a: \text{Address}): (\text{zero_mask?}(4)))) \supset$$

$$(\forall (x_1: [\text{Pte_type}, \text{Address}]): \text{singleton?}[\text{list}[\text{Byte}]](f(x_1)))$$

Repeatedly Skolemizing and flattening,
 Replacing using formula -1,
 Using lemma singleton_zero_mask,
 Expanding the definition of singleton?,
 which is trivially true.
 This completes the proof of pte_model_TCC1.
 Q.E.D.

C.153.14 PTE_Model.pte_valid_to_byte

The L^AT_EX code for this proof is broken.

C.153.15 PTE_Model.pte_is_pod

Terse proof for pte_is_pod.

pte_is_pod:

$$\{1\} \quad \text{pod_data_type?}(\text{pte_model})$$

Expanding the definition of pod_data_type?,

Expanding the definition of interpreted_data_type?,
 Expanding the definition of uninterpreted_data_type?,
 Applying propositional simplification,
 we get 6 subgoals:

pte_is_pod.1:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \quad \neg \text{length}(l) = \text{size}(\text{pte_model}'\text{uidt}) \supset \neg \text{valid?}(\text{pte_model}'\text{uidt})(l, a)}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pte_model,
 Expanding the definition of pte_valid?,
 which is trivially true.
 This completes the proof of pte_is_pod.1.

pte_is_pod.2:

$$\frac{}{\{1\} \quad \forall (d: \text{Pte_type}, a: \text{Address}): \text{valid?}(\text{uidt}(\text{pte_model}))(\text{to_byte}(\text{pte_model})(d, a), a)}$$

Repeatedly Skolemizing and flattening,
 Rewriting using pte_valid_to_byte, matching in *,
 This completes the proof of pte_is_pod.2.

pte_is_pod.3:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[\text{Byte}], a: \text{Address}): \quad \text{valid?}(\text{uidt}(\text{pte_model}))(l, a) \equiv \text{up?}(\text{from_byte}(\text{pte_model}))(l, a)}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pte_model,
 Expanding the definition of pte_from_byte,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pte_is_pod.3.

pte_is_pod.4:

$$\frac{}{\{1\} \quad \forall (d: \text{Pte_type}, a: \text{Address}): \quad \text{down}(\text{from_byte}(\text{pte_model})(\text{to_byte}(\text{pte_model})(d, a), a)) = d}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pte_model,
 Expanding the definition of pte_to_byte,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 we get 2 subgoals:

pte_is_pod.4.1:

$$\frac{\{-1\} \quad \text{not_present?}(d')}{\{1\} \quad \text{down}(\text{pte_from_byte}((:0, 0, 0, 0:), a')) = d'}$$

Installing automatic rewrites from: pte_from_byte cut_bit_zero nth pte_valid? length pte_page_from_byte

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pte_is_pod.4.1.

C Proof scripts

pte_is_pod.4.2:

{1}	not_present?(d')
{2}	down(pte_from_byte(pte_page_to_byte(pte(d'), a'), a')) = d'

Installing automatic rewrites from: pte_page_to_byte! pte_from_byte pte_page_from_byte pte_valid? nth length length_cdr length_is_cons cut_bits_overwrite_bool_bit_disjoined cut_bits_zero cut_bits_overwrite_bits_disjoined cut_bits_cut_bits cut_bits_overwrite_bits_contained cut_bit_overwrite_bool_bit overwrite_shift_bits_zero overwrite_shift_bits_merge aligned_address_aligned cut_bit_cut_bits cut_bit_overwrite_shift_bits cut_bits_overwrite_shift_bits_contained length_to_byte from_byte_to_byte valid_to_byte cut_bit_zero bool_to_memory_access_iso bool_to_memory_privilege_iso max_linear_offset bus_width

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Adding type constraints for pte(d!1)'page_base,

Rewriting using shift_bits_left_cut_bits, matching in *,

Applying extensionality,

we get 3 subgoals:

pte_is_pod.4.2.1:

{-1}	Mem?(pte(d)'page_base'type_of)
{-2}	$0 \leq \text{pte}(d)'page_base'offset$
{-3}	$\text{pte}(d)'page_base'offset < \text{expt}(2, 32)$
{-4}	aligned?(12)(offset(pte(d)'page_base))

{2}	not_present?(d')

Applying extensionality,

we get 2 subgoals:

pte_is_pod.4.2.1.1:

{-1}	Mem?(pte(d)'page_base'type_of)
{-2}	$0 \leq \text{pte}(d)'page_base'offset$
{-3}	$\text{pte}(d)'page_base'offset < \text{expt}(2, 32)$
{-4}	aligned?(12)(offset(pte(d)'page_base))
{1}	bools_to_memory_access(memory_access_to_bools(pte(d)'access)'1, TRUE) = pte(d)'access
{2}	not_present?(d')

Applying extensionality,

Expanding the definition of bools_to_memory_access,

Expanding the definition of memory_access_to_bools,

Adding type constraints for pte(d!1)'access,

Expanding the definition of subset?,

Instantiating the top quantifier in -1 with the terms: x',

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pte_is_pod.4.2.1.1.

pte_is_pod.4.2.1.2:

{-1}	Mem?(pte(d')'page_base'type_of)
{-2}	$0 \leq$ pte(d')'page_base'offset
{-3}	pte(d')'page_base'offset < expt(2, 32)
{-4}	aligned?(12)(offset(pte(d')'page_base))
{1}	Mem(offset(pte(d')'page_base)) = pte(d')'page_base
{2}	not_present?(d')

Expanding the definition of Mem,

Applying extensionality,

This completes the proof of pte_is_pod.4.2.1.2.

pte_is_pod.4.2.2:

{-1}	Mem?(pte(d')'page_base'type_of)
{-2}	$0 \leq$ pte(d')'page_base'offset
{-3}	pte(d')'page_base'offset < expt(2, 32)
{-4}	aligned?(12)(offset(pte(d')'page_base))
{1}	Mem?(Mem(offset(pte(d')'page_base))'type_of) \wedge $(0 \leq$ Mem(offset(pte(d')'page_base))'offset \wedge Mem(offset(pte(d')'page_base))'offset < expt(2, 32)) \wedge aligned?(12)(offset(Mem(offset(pte(d')'page_base))))
{2}	not_present?(d')

Expanding the definition of Mem,

which is trivially true.

This completes the proof of pte_is_pod.4.2.2.

pte_is_pod.4.2.3:

{-1}	Mem?(pte(d')'page_base'type_of)
{-2}	$0 \leq$ pte(d')'page_base'offset
{-3}	pte(d')'page_base'offset < expt(2, 32)
{-4}	aligned?(12)(offset(pte(d')'page_base))
{1}	$((\text{singleton}[\text{Memory_access}](\text{Read}) \cup \{\text{Execute}\}) \subseteq \text{bools_to_memory_access}(\text{memory_access_to_bools}(\text{pte}(\mathit{d}')\text{'access})))$
{2}	not_present?(d')

Expanding the definition of bools_to_memory_access,

Expanding the definition of memory_access_to_bools,

Adding type constraints for pte(d')'access,

Expanding the definition of subset?,

Repeatedly Skolemizing and flattening,

Instantiating the top quantifier in -1 with the terms: x' ,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pte_is_pod.4.2.3.

pte_is_pod.5:

{1}	$\forall (l: \text{list}[\text{Byte}], a_1, a_2: \text{Address}):$ $\text{valid?}(\text{uidt}(\text{pte_model}))(l, a_1) \equiv \text{valid?}(\text{uidt}(\text{pte_model}))(l, a_2)$
-----	--

Repeatedly Skolemizing and flattening,

Hiding formulas: -1,

Expanding the definition of pte_model,

Expanding the definition of pte_valid?,

which is trivially true.

This completes the proof of pte_is_pod.5.

pte_is_pod.6:

{1} size(uidt(pte_model)) > 0

Expanding the definition of pte_model,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of pte_is_pod.6.
Q.E.D.

C.154 Proofs for Page_Directory_Types (paging-data.pvs)

C.154.1 Page_Directory_Types.Pde_pt_type_TCC1

Terse proof for Pde_pt_type_TCC1.

Pde_pt_type_TCC1:

{1} $\forall (a: \text{Memory_Address_4G}): \text{offset}(a) \geq 0$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of Pde_pt_type_TCC1.
Q.E.D.

C.155 Proofs for Paging_Datatype (paging-data.pvs)

C.155.1 Paging_Datatype.paging_data_type_TCC1

Terse proof for paging_data_type_TCC1.

paging_data_type_TCC1:

{1} $\forall (\text{lvl}: \text{Level}): \text{lvl} = 0 \supset (\forall (x: ((\text{range_pt}(\text{lvl})))): (\text{pdir?})(x))$

Repeatedly Skolemizing and flattening,
Expanding the definition of range_pt,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of paging_data_type_TCC1.
Q.E.D.

C.155.2 Paging_Datatype.paging_data_type_TCC2

Terse proof for paging_data_type_TCC2.

paging_data_type_TCC2:

{1} $\forall (\text{lvl}: \text{Level}): \text{lvl} = 0 \supset (\forall (x_1: \text{Pde_type}): \text{range_pt}(\text{lvl})(\text{Pdir}(x_1)))$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of paging_data_type_TCC2.
Q.E.D.

C.155.3 Paging_Datatype.paging_data_type_TCC3

Terse proof for paging_data_type_TCC3.

paging_data_type_TCC3:

<pre>{1} ∀ (lvl: Level): lvl = 0 ⊃ pod_data_type?[(range_pt(lvl))] (dt_lift[Pde_type, (range_pt(lvl))] (pde_data_type, restrict[(pdir?), (range_pt(lvl)), Pde_type](pdir), Pdir))</pre>

Repeatedly Skolemizing and flattening,

Expanding the definition of dt_lift,

Adding type constraints for pde_data_type,

Expanding the definition of pod_data_type?,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of interpreted_data_type?,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 3 subgoals:

paging_data_type_TCC3.1:

<pre>{-1} uninterpreted_data_type?(pde_data_type'uidt) {-2} ∀ (d: Pde_type, a: Address): valid?(uidt(pde_data_type))(to_byte(pde_data_type)(d, a), a) {-3} ∀ (l: list[Byte], a: Address): valid?(uidt(pde_data_type))(l, a) ≡ up?(from_byte(pde_data_type)(l, a)) {-4} ∀ (d: Pde_type, a: Address): down(from_byte(pde_data_type)(to_byte(pde_data_type)(d, a), a)) = d {-5} ∀ (l: list[Byte], a₁, a₂: Address): valid?(uidt(pde_data_type))(l, a₁) ≡ valid?(uidt(pde_data_type))(l, a₂) {-6} size(uidt(pde_data_type)) > 0 {-7} lvl' < max_level {-8} lvl' = 0</pre>
<pre>{1} ∀ (d: ((range_pt(lvl')), a₁: Address): down(CASES from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lvl'))), Pde_type](pdir)(d), a₁), a₁) OF up(d₁): up(Pdir(d₁)), bottom: bottom ENDCASES) = d</pre>

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

paging_data_type_TCC3.1.1.1:

<pre> {-1} range_pt(lv')(d') {-2} uninterpreted_data_type?(pde_data_type'uidt) {-3} ∀ (d: Pde_type, a: Address): valid?(uidt(pde_data_type))(to_byte(pde_data_type)(d, a), a) {-4} ∀ (l: list[Byte], a: Address): valid?(uidt(pde_data_type))(l, a) ≡ up?(from_byte(pde_data_type)(l, a)) {-5} ∀ (d: Pde_type, a: Address): down(from_byte(pde_data_type)(to_byte(pde_data_type)(d, a), a)) = d {-6} ∀ (l: list[Byte], a₁, a₂: Address): valid?(uidt(pde_data_type))(l, a₁) ≡ valid?(uidt(pde_data_type))(l, a₂) {-7} size(uidt(pde_data_type)) > 0 {-8} lv' < max_level {-9} lv' = 0 {-10} up?(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lv'))), Pde_type](pdir)(d'), a'), a')) </pre>	<pre> {1} Pdir(down(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lv'))), Pde_type](pdir)(d'), a'), a'))) = d' </pre>
---	--

Instantiating the top quantifier in -5 with the terms: (pdir(d!1) a!1),
we get 2 subgoals:

paging_data_type_TCC3.1.1.1.1:

<pre> {-1} range_pt(lv')(d') {-2} uninterpreted_data_type?(pde_data_type'uidt) {-3} ∀ (d: Pde_type, a: Address): valid?(uidt(pde_data_type))(to_byte(pde_data_type)(d, a), a) {-4} ∀ (l: list[Byte], a: Address): valid?(uidt(pde_data_type))(l, a) ≡ up?(from_byte(pde_data_type)(l, a)) {-5} down(from_byte(pde_data_type)(to_byte(pde_data_type)(pdir(d'), a'), a')) = pdir(d') {-6} ∀ (l: list[Byte], a₁, a₂: Address): valid?(uidt(pde_data_type))(l, a₁) ≡ valid?(uidt(pde_data_type))(l, a₂) {-7} size(uidt(pde_data_type)) > 0 {-8} lv' < max_level {-9} lv' = 0 {-10} up?(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lv'))), Pde_type](pdir)(d'), a'), a')) </pre>	<pre> {1} Pdir(down(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lv'))), Pde_type](pdir)(d'), a'), a'))) = d' </pre>
--	--

Expanding the definition of restrict,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Replacing using formula -5,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Using lemma Paging_type_Pdir_eta,

This completes the proof of paging_data_type_TCC3.1.1.1.

paging_data_type_TCC3.1.1.2:

<pre> {-1} range_pt(lvl')(d') {-2} uninterpreted_data_type?(pde_data_type'uidt) {-3} ∀ (d: Pde_type, a: Address): valid?(uidt(pde_data_type))(to_byte(pde_data_type)(d, a), a) {-4} ∀ (l: list[Byte], a: Address): valid?(uidt(pde_data_type))(l, a) ≡ up?(from_byte(pde_data_type)(l, a)) {-5} ∀ (l: list[Byte], a1, a2: Address): valid?(uidt(pde_data_type))(l, a1) ≡ valid?(uidt(pde_data_type))(l, a2) {-6} size(uidt(pde_data_type)) > 0 {-7} lvl' < max_level {-8} lvl' = 0 {-9} up?(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lvl'))), Pde_type](pdir)(d'), a'), a')) </pre>	<hr style="border: 0.5px solid black;"/> <pre> {1} pdir'(d') {2} Pdir(down(from_byte(pde_data_type) (to_byte(pde_data_type) (restrict[(pdir?), ((range_pt(lvl'))), Pde_type](pdir)(d'), a'), a')))) = d' </pre>
---	---

Expanding the definition of range_pt,

which is trivially true.

This completes the proof of paging_data_type_TCC3.1.1.2.

paging_data_type_TCC3.1.2:

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Instantiating quantified variables,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Replacing using formula -5,

Using lemma `Paging_type_Ptab_eta`,

This completes the proof of `paging_data_type_TCC6.1`.

`paging_data_type_TCC6.2:`

{-1}	<code>uninterpreted_data_type?(pte_data_type'uidt)</code>
{-2}	<code>∀ (d: Pte_type, a: Address): valid?(uidt(pte_data_type))(to_byte(pte_data_type)(d, a), a)</code>
{-3}	<code>∀ (l: list[Byte], a: Address): valid?(uidt(pte_data_type))(l, a) ≡ up?(from_byte(pte_data_type)(l, a))</code>
{-4}	<code>∀ (d: Pte_type, a: Address): down(from_byte(pte_data_type)(to_byte(pte_data_type)(d, a), a)) = d</code>
{-5}	<code>∀ (l: list[Byte], a₁, a₂: Address): valid?(uidt(pte_data_type))(l, a₁) ≡ valid?(uidt(pte_data_type))(l, a₂)</code>
{-6}	<code>size(uidt(pte_data_type)) > 0</code>
{-7}	<code>lvl' < max_level</code>
{-8}	<code>lvl' = 1</code>
{1}	<code>∀ (l₁: list[Byte], a₁: Address): valid?(uidt(pte_data_type))(l₁, a₁) ≡ up?(CASES from_byte(pte_data_type)(l₁, a₁) OF up(d₁): up(Ptab(d₁)), bot- tom: bottom ENDCASES)</code>

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `paging_data_type_TCC6.2`.

paging_data_type_TCC6.3:

{-1}	uninterpreted_data_type?(pte_data_type uidt)
{-2}	$\forall (d: \text{Pte_type}, a: \text{Address}):$ valid?(uidt(pte_data_type))(to_byte(pte_data_type)(d, a), a)
{-3}	$\forall (l: \text{list}[\text{Byte}], a: \text{Address}):$ valid?(uidt(pte_data_type))(l, a) \equiv up?(from_byte(pte_data_type)(l, a))
{-4}	$\forall (d: \text{Pte_type}, a: \text{Address}):$ down(from_byte(pte_data_type)(to_byte(pte_data_type)(d, a), a)) = d
{-5}	$\forall (l: \text{list}[\text{Byte}], a_1, a_2: \text{Address}):$ valid?(uidt(pte_data_type))(l, a_1) \equiv valid?(uidt(pte_data_type))(l, a_2)
{-6}	size(uidt(pte_data_type)) > 0
{-7}	lvl' < max_level
{-8}	lvl' = 1
{1}	$\forall (d: (\text{range_pt}(\text{lvl}')), a_1: \text{Address}):$ valid?(uidt(pte_data_type))(to_byte(pte_data_type)(ptab(d), a_1), a_1)

Repeatedly Skolemizing and flattening,
 Instantiating quantified variables,
 This completes the proof of paging_data_type_TCC6.3.
 Q.E.D.

C.155.7 Paging_Datatype.paging_data_type_TCC7

Terse proof for paging_data_type_TCC7.

paging_data_type_TCC7:

{1}	$\forall (\text{lvl}: \text{Level}): \text{lvl} = 0 \vee \text{lvl} = 1$
-----	--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of paging_data_type_TCC7.
 Q.E.D.

C.156 Proofs for Paging_type (paging-data.pvs)

This theory contains no provable formal statements.

C.157 Proofs for Paging_type_adt (Paging_type_adt.pvs)

This theory contains no provable formal statements.

C.158 Proofs for Paging_type_adt_reduce (Paging_type_adt.pvs)

This theory contains no provable formal statements.

C.159 Proofs for Paging_type_helpers (paging-data.pvs)

C.159.1 Paging_type_helpers.range_pt_TCC1

Terse proof for range_pt_TCC1.

range_pt_TCC1:

$$\{1\} \quad \forall (lvl: Level): lvl = 0 \vee lvl = 1$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of range_pt_TCC1.

Q.E.D.

C.159.2 Paging_type_helpers.base_TCC1

Terse proof for base_TCC1.

base_TCC1:

$$\{1\} \quad \forall (pt: (present?), ptab: Pte_type): pt = Ptab(ptab) \supset pte?(ptab)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of base_TCC1.

Q.E.D.

C.159.3 Paging_type_helpers.base_TCC2

Terse proof for base_TCC2.

base_TCC2:

$$\{1\} \quad \forall (pt: (present?), pdir: Pdir_type): pt = Pdir(pdir) \supset \neg \text{not_present?}(pdir)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of base_TCC2.

Q.E.D.

C.159.4 Paging_type_helpers.set_reference_range

Terse proof for set_reference_range.

set_reference_range:

$$\{1\} \quad \forall (lvl: Level, pt: (range_pt(lvl)), access: Memory_access): \\ \text{range_pt}(lvl)(\text{set_reference}(pt, access))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of set_reference_range.

Q.E.D.

C.159.5 Paging_type_helpers.set_reference_pdir_entry

Terse proof for set_reference_pdir_entry.

`set_reference_pdir_entry:`

$\{1\} \quad \forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}):$ $\text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \supset$ $\text{pdir_entry?}(pt1) = \text{pdir_entry?}(pt2)$
--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `set_reference_pdir_entry`.
Q.E.D.

C.159.6 *Paging_type_helpers.set_reference_ptab_entry*

Terse proof for `set_reference_ptab_entry`.

`set_reference_ptab_entry:`

$\{1\} \quad \forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}):$ $\text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \supset$ $\text{ptab_entry?}(pt1) = \text{ptab_entry?}(pt2)$
--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `set_reference_ptab_entry`.
Q.E.D.

C.159.7 *Paging_type_helpers.set_reference_paging_type*

Terse proof for `set_reference_paging_type`.

`set_reference_paging_type:`

$\{1\} \quad \forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}, \text{lvl}: \text{Level}):$ $\text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \supset$ $\text{paging_type?}(\text{lvl}, pt1) = \text{paging_type?}(\text{lvl}, pt2)$
--

Repeatedly Skolemizing and flattening,
Expanding the definition of `paging_type?`,
Case splitting on `lvl = 0`,
we get 2 subgoals:

`set_reference_paging_type.1:`

$\{-1\} \quad \text{lvl}' = 0$ $\{-2\} \quad \text{lvl}' < \text{max_level}$ $\{-3\} \quad \text{set_reference}(pt1', \text{access}') = \text{set_reference}(pt2', \text{access}')$
$\{1\} \quad \text{COND } \text{lvl}' = 0 \rightarrow \text{pdir_entry?}(pt1'), \text{ ELSE } \rightarrow \text{ptab_entry?}(pt1') \text{ ENDCOND} =$ $\text{COND } \text{lvl}' = 0 \rightarrow \text{pdir_entry?}(pt2'), \text{ ELSE } \rightarrow \text{ptab_entry?}(pt2') \text{ ENDCOND}$

Using lemma `set_reference_pdir_entry`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `set_reference_paging_type.1`.

`set_reference_paging_type.2:`

$\{-1\} \quad \text{lvl}' < \text{max_level}$ $\{-2\} \quad \text{set_reference}(pt1', \text{access}') = \text{set_reference}(pt2', \text{access}')$
$\{1\} \quad \text{lvl}' = 0$ $\{2\} \quad \text{COND } \text{lvl}' = 0 \rightarrow \text{pdir_entry?}(pt1'), \text{ ELSE } \rightarrow \text{ptab_entry?}(pt1') \text{ ENDCOND} =$ $\text{COND } \text{lvl}' = 0 \rightarrow \text{pdir_entry?}(pt2'), \text{ ELSE } \rightarrow \text{ptab_entry?}(pt2') \text{ ENDCOND}$

C Proof scripts

Using lemma `set_reference_ptab_entry`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `set_reference_paging_type.2`.
Q.E.D.

C.159.8 Paging_type_helpers.set_reference_present

Terse proof for `set_reference_present`.

`set_reference_present`:

{1} $\forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}):$ $\text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \supset \text{present?}(pt1) = \text{present?}(pt2)$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
we get 12 subgoals:

`set_reference_present.1`:

{-1} <code>Write?(access')</code> {-2} <code>ptab?(pt1')</code> {-3} <code>Ptab(Pte(pte(ptab(pt1'))) WITH [dirty := TRUE, accessed := TRUE]) = Ptab(Not_present)</code> {-4} <code>ptab?(pt2')</code> {-5} <code>not_present?(ptab(pt2'))</code>
{1} <code>not_present?(ptab(pt1'))</code>

Applying `decompose-equality`,
This completes the proof of `set_reference_present.1`.

`set_reference_present.2`:

{-1} <code>Write?(access')</code> {-2} <code>pde_pt?(pdir(pt1'))</code> {-3} <code>Pdir(Pde_pt(pde_pt(pdir(pt1'))) WITH [accessed := TRUE]) = Pdir(Not_present)</code> {-4} <code>not_present?(pdir(pt2'))</code>
{1} <code>ptab?(pt1')</code> {2} <code>ptab?(pt2')</code>

Applying `decompose-equality`,
This completes the proof of `set_reference_present.2`.

`set_reference_present.3`:

{-1} <code>Write?(access')</code> {-2} <code>Pdir(Pde_4m(pde_4m(pdir(pt1'))) WITH [dirty := TRUE, accessed := TRUE]) = Pdir(Not_present)</code> {-3} <code>not_present?(pdir(pt2'))</code>
{1} <code>ptab?(pt1')</code> {2} <code>not_present?(pdir(pt1'))</code> {3} <code>pde_pt?(pdir(pt1'))</code> {4} <code>ptab?(pt2')</code>

Applying `decompose-equality`,
This completes the proof of `set_reference_present.3`.

set_reference_present.4:

{-1}	ptab?(pt1')
{-2}	Ptab(Pte(pte(ptab(pt1'))) WITH [accessed := TRUE])) = Ptab(Not_present)
{-3}	ptab?(pt2')
{-4}	not_present?(ptab(pt2'))
{1}	Write?(access')
{2}	not_present?(ptab(pt1'))

Applying decompose-equality,
This completes the proof of **set_reference_present.4**.

set_reference_present.5:

{-1}	pde_pt?(pdir(pt1'))
{-2}	Pdir(Pde_pt(pde_pt(pdir(pt1'))) WITH [accessed := TRUE])) = Pdir(Not_present)
{-3}	not_present?(pdir(pt2'))
{1}	Write?(access')
{2}	ptab?(pt1')
{3}	ptab?(pt2')

Applying decompose-equality,
This completes the proof of **set_reference_present.5**.

set_reference_present.6:

{-1}	Pdir(Pde_4m(pde_4m(pdir(pt1'))) WITH [accessed := TRUE])) = Pdir(Not_present)
{-2}	not_present?(pdir(pt2'))
{1}	Write?(access')
{2}	ptab?(pt1')
{3}	not_present?(pdir(pt1'))
{4}	pde_pt?(pdir(pt1'))
{5}	ptab?(pt2')

Applying decompose-equality,
This completes the proof of **set_reference_present.6**.

set_reference_present.7:

{-1}	Write?(access')
{-2}	ptab?(pt1')
{-3}	not_present?(ptab(pt1'))
{-4}	Ptab(Not_present) = Ptab(Pte(pte(ptab(pt2'))) WITH [dirty := TRUE, accessed := TRUE]))
{-5}	ptab?(pt2')
{1}	not_present?(ptab(pt2'))

Applying decompose-equality,
This completes the proof of **set_reference_present.7**.

set_reference_present.8:

{-1}	Write?(access')
{-2}	not_present?(pdir(pt1'))
{-3}	pde_pt?(pdir(pt2'))
{-4}	Pdir(Not_present) = Pdir(Pde_pt(pde_pt(pdir(pt2'))) WITH [accessed := TRUE]))
{1}	ptab?(pt1')
{2}	ptab?(pt2')

Applying decompose-equality,
This completes the proof of **set_reference_present.8**.

`set_reference_present.9:`

{-1}	Write?(access')
{-2}	not_present?(pdir(pt1'))
{-3}	Pdir(Not_present) = Pdir(Pde_4m(pde_4m(pdir(pt2'))) WITH [dirty := TRUE, accessed := TRUE]))
{1}	ptab?(pt1')
{2}	pde_pt?(pdir(pt2'))
{3}	ptab?(pt2')
{4}	not_present?(pdir(pt2'))

Applying decompose-equality,

This completes the proof of `set_reference_present.9`.

`set_reference_present.10:`

{-1}	ptab?(pt1')
{-2}	not_present?(ptab(pt1'))
{-3}	Ptab(Not_present) = Ptab(Pte(pte(ptab(pt2'))) WITH [accessed := TRUE]))
{-4}	ptab?(pt2')
{1}	Write?(access')
{2}	not_present?(ptab(pt2'))

Applying decompose-equality,

This completes the proof of `set_reference_present.10`.

`set_reference_present.11:`

{-1}	not_present?(pdir(pt1'))
{-2}	pde_pt?(pdir(pt2'))
{-3}	Pdir(Not_present) = Pdir(Pde_pt(pde_pt(pdir(pt2'))) WITH [accessed := TRUE]))
{1}	Write?(access')
{2}	ptab?(pt1')
{3}	ptab?(pt2')

Applying decompose-equality,

This completes the proof of `set_reference_present.11`.

`set_reference_present.12:`

{-1}	not_present?(pdir(pt1'))
{-2}	Pdir(Not_present) = Pdir(Pde_4m(pde_4m(pdir(pt2'))) WITH [accessed := TRUE]))
{1}	Write?(access')
{2}	ptab?(pt1')
{3}	pde_pt?(pdir(pt2'))
{4}	ptab?(pt2')
{5}	not_present?(pdir(pt2'))

Applying decompose-equality,

This completes the proof of `set_reference_present.12`.

Q.E.D.

C.159.9 Paging_type_helpers.set_reference_base_TCC1

Terse proof for `set_reference_base_TCC1`.

set_reference_base_TCC1:

$$\frac{}{\{1\} \quad \forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}): \quad \text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \wedge \text{present?}(pt1) \supset \text{present?}(pt2)}$$

Repeatedly Skolemizing and flattening,

Using lemma set_reference_present,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of set_reference_base_TCC1.

Q.E.D.

C.159.10 Paging_type_helpers.set_reference_base

Terse proof for set_reference_base.

set_reference_base:

$$\frac{}{\{1\} \quad \forall (pt1, pt2: \text{Paging_type}, \text{access}: \text{Memory_access}): \quad \text{set_reference}(pt1, \text{access}) = \text{set_reference}(pt2, \text{access}) \wedge \text{present?}(pt1) \supset \quad \text{base}(pt1) = \text{base}(pt2)}$$

Trying repeated skolemization, instantiation, and if-lifting,

we get 16 subgoals:

set_reference_base.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{Write?}(\text{access}') \\ \{-2\} \quad \text{ptab?}(pt1') \\ \{-3\} \quad \text{ptab?}(pt2') \\ \{-4\} \quad \text{not_present?}(\text{ptab}(pt2')) \\ \{-5\} \quad \text{Ptab}(\text{Pte}(\text{pte}(\text{ptab}(pt1')) \text{ WITH } [\text{dirty} := \text{TRUE}, \text{accessed} := \text{TRUE}]))) = \text{Ptab}(\text{Not_present}) \end{array}}{\begin{array}{l} \{1\} \quad \text{not_present?}(\text{ptab}(pt1')) \\ \{2\} \quad \text{page_base}(\text{pte}(\text{ptab}(pt1'))) = \text{page_base}(\text{pte}(\text{ptab}(pt2'))) \end{array}}$$

Applying decompose-equality,

This completes the proof of set_reference_base.1.

set_reference_base.2:

$$\frac{\begin{array}{l} \{-1\} \quad \text{Write?}(\text{access}') \\ \{-2\} \quad \text{ptab?}(pt1') \\ \{-3\} \quad \text{ptab?}(pt2') \\ \{-4\} \quad \text{Ptab}(\text{Pte}(\text{pte}(\text{ptab}(pt1')) \text{ WITH } [\text{dirty} := \text{TRUE}, \text{accessed} := \text{TRUE}]))) = \quad \text{Ptab}(\text{Pte}(\text{pte}(\text{ptab}(pt2')) \text{ WITH } [\text{dirty} := \text{TRUE}, \text{accessed} := \text{TRUE}]))) \end{array}}{\begin{array}{l} \{1\} \quad \text{not_present?}(\text{ptab}(pt1')) \\ \{2\} \quad \text{not_present?}(\text{ptab}(pt2')) \\ \{3\} \quad \text{page_base}(\text{pte}(\text{ptab}(pt1'))) = \text{page_base}(\text{pte}(\text{ptab}(pt2'))) \end{array}}$$

Applying decompose-equality,

{1}	Write?(access')	
{2}	ptab?(pt2')	
{3}	not_present?(pdir(pt2'))	
{4}	pde_pt?(pdir(pt2'))	

Applying decompose-equality,

This completes the proof of set_reference_leaf.5.

set_reference_leaf.6:

{-1}	pdir?(pt1')	=
{-2}	Pdir(Pde_4m(pde_4m(pdir(pt1'))) WITH [accessed := TRUE])) = Pdir(Pde_pt(pde_pt(pdir(pt2'))) WITH [accessed := TRUE]))	
{-3}	pdir?(pt2')	
{-4}	pde_pt?(pdir(pt2'))	
{1}	Write?(access')	
{2}	not_present?(pdir(pt1'))	
{3}	pde_pt?(pdir(pt1'))	

Applying decompose-equality,

This completes the proof of set_reference_leaf.6.

Q.E.D.

C.160 Proofs for Pde_type (paging-data.pvs)

This theory contains no provable formal statements.

C.161 Proofs for Pde_type_adt (Pde_type_adt.pvs)

C.161.1 Pde_type_adt.Pde_4m_TCC1

Terse proof for Pde_4m_TCC1.

Pde_4m_TCC1:

{1}	$\forall (a: \text{Memory_Address_4G}): \text{offset}(a) \geq 0$
-----	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of Pde_4m_TCC1.

Q.E.D.

C.162 Proofs for Pde_type_adt_reduce (Pde_type_adt.pvs)

This theory contains no provable formal statements.

C.163 Proofs for Phy_Mem_Blessing (challenge-phymem.pvs)

C.163.1 Phy_Mem_Blessing.phy_mem_plain_memory

Terse proof for phy_mem_plain_memory.

phy_mem_plain_memory:

$$\frac{\{1\} \quad \forall (\text{oact}: \text{PRED}[[\text{Physical_memory} \rightarrow \text{SuperResult}[\text{Physical_memory}]]]):$$

$$\quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{oact}, \text{in_memory}(\text{min}, \text{max}))$$

$$\quad \supset \text{plain_memory?}(\text{phy_pm}(\text{oact}))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of plain_memory?,

Expanding the definition of phy_pm,

Rewriting using union_empty_left, matching in *,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 7 subgoals:

phy_mem_plain_memory.1:

$$\frac{\{-1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{oact}', \text{in_memory}(\text{min}, \text{max}))$$

$$\{1\} \quad \text{side_effect_content_unchanged}(\text{in_memory}(\text{min}, \text{max}), \text{fullset}[\text{Physical_memory}],$$

$$\quad \text{memory_write_side_effect}(\text{phy_mem}))$$

Hiding formulas: (-1),

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_plain_memory.1.

phy_mem_plain_memory.2:

$$\frac{\{-1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{oact}', \text{in_memory}(\text{min}, \text{max}))$$

$$\{1\} \quad \text{side_effect_content_unchanged}(\text{in_memory}(\text{min}, \text{max}), \text{fullset}[\text{Physical_memory}],$$

$$\quad \text{memory_read_side_effect}(\text{phy_mem}))$$

Hiding formulas: (-1),

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_plain_memory.2.

phy_mem_plain_memory.3:

$$\frac{\{-1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{oact}', \text{in_memory}(\text{min}, \text{max}))$$

$$\{1\} \quad \text{transformers_ok?}(\text{fullset}[\text{Physical_memory}],$$

$$\quad ((\text{memory_read_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max})) \cup \text{memory_write_transf}))$$

Hiding formulas: -1,

Using lemma phy_mem_read_transformers_ok,

Using lemma phy_mem_write_transformers_ok,

Using lemma phy_mem_read_side_effects_transformers_ok,

Using lemma phy_mem_write_side_effects_transformers_ok,

Rewriting using transformers_ok_union_transformers, matching in *,

we get 2 subgoals:

C Proof scripts

phy_mem_plain_memory.3.1:

{-1}	transformers_ok?(fullset[Physical_memory[min, max]], memory_write_side_effect_super_transformers(phy_mem, in_memory(min, ma
{-2}	transformers_ok?(fullset[Physical_memory[min, max]], memory_read_side_effect_super_transformers(phy_mem, in_memory(min, ma
{-3}	transformers_ok?(fullset[Physical_memory[min, max]], memory_write_transformers(phy_mem, in_memory(min, max)))
{-4}	transformers_ok?(fullset[Physical_memory[min, max]], memory_read_transformers(phy_mem, in_memory(min, max)))
{1}	transformers_ok?(fullset[Physical_memory], (memory_read_transformers(phy_mem, in_memory(min, max)) ∪ memory_w
{2}	transformers_ok?(fullset[Physical_memory], ((memory_read_transformers(phy_mem, in_memory(min, max)) ∪ memory_w

Rewriting using transformers_ok_union_transformers, matching in *,

This completes the proof of phy_mem_plain_memory.3.1.

phy_mem_plain_memory.3.2:

{-1}	transformers_ok?(fullset[Physical_memory[min, max]], memory_write_side_effect_super_transformers(phy_mem, in_memory(min, m
{-2}	transformers_ok?(fullset[Physical_memory[min, max]], memory_read_side_effect_super_transformers(phy_mem, in_memory(min, ma
{-3}	transformers_ok?(fullset[Physical_memory[min, max]], memory_write_transformers(phy_mem, in_memory(min, max)))
{-4}	transformers_ok?(fullset[Physical_memory[min, max]], memory_read_transformers(phy_mem, in_memory(min, max)))
{1}	transformers_ok?(fullset[Physical_memory], (memory_read_side_effect_super_transformers(phy_mem, in_memory(min, m
{2}	transformers_ok?(fullset[Physical_memory], ((memory_read_transformers(phy_mem, in_memory(min, max)) ∪ memory_w

Rewriting using transformers_ok_union_transformers, matching in *,

This completes the proof of phy_mem_plain_memory.3.2.

phy_mem_plain_memory.4:

{-1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], oact', in_memory(min, ma
{1}	changed_memory_invariant?(phy_mem, fullset[Physical_memory], in_memory(min, max))

Rewriting using phy_mem_changed_memory_invariant, matching in *,

This completes the proof of phy_mem_plain_memory.4.

phy_mem_plain_memory.5:

{-1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], oact', in_memory(min, ma
{1}	unchanged_memory_write_invariant?(phy_mem, fullset[Physical_memory], in_memory(min, max)

Rewriting using phy_mem_unchanged_memory_write_invariant, matching in *,

This completes the proof of phy_mem_plain_memory.5.

phy_mem_plain_memory.6:

{-1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], oact', in_memory(min, ma
{1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], memory_write_transformers(phy_mem, in_memory(min, max)) emptyset[Address])

Hiding formulas: -1,

Expanding the definition of unchanged_memory_invariant?,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

`phy_mem_plain_memory.6.1:`

$$\begin{array}{|l}
 \hline
 \{1\} \quad \forall (s: \text{Physical_memory}[\text{min}, \text{max}], \\
 \quad q: [\text{Physical_memory}[\text{min}, \text{max}] \rightarrow \text{SuperResult}[\text{Physical_memory}[\text{min}, \text{max}]]], \\
 \quad a: \text{Address}): \\
 \text{fullset}[\text{Physical_memory}](s) \wedge \\
 \text{memory_write_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max}))(q) \wedge \\
 \text{emptyset}[\text{Address}](a) \wedge \\
 \text{OK?}(q(s)) \wedge \\
 \quad \text{OK?}(\text{memory_read}(\text{phy_mem})(a)(s)) \wedge \\
 \quad \text{OK?}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s)))) \\
 \supset \\
 \text{data}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s)))) = \\
 \text{data}(\text{memory_read}(\text{phy_mem})(a)(s))
 \end{array}$$

Repeatedly Skolemizing and flattening,

Expanding the definition of `emptyset`,

which is trivially true.

This completes the proof of `phy_mem_plain_memory.6.1`.

`phy_mem_plain_memory.6.2:`

$$\begin{array}{|l}
 \hline
 \{1\} \quad \text{transformer_invariant?}(\text{fullset}[\text{Physical_memory}], \\
 \quad \text{memory_write_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max})))
 \end{array}$$

Rewriting using `transformer_invariant_truth`, matching in `*`,

This completes the proof of `phy_mem_plain_memory.6.2`.

`phy_mem_plain_memory.7:`

$$\begin{array}{|l}
 \hline
 \{-1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{oact}', \text{in_memory}(\text{min}, \text{max})) \\
 \{1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \\
 \quad ((\text{oact}' \cup \text{memory_read_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max}))) \cup \\
 \quad \text{in_memory}(\text{min}, \text{max}))
 \end{array}$$

Using lemma `phy_mem_unchanged_memory_invariant_read_transformers`,

Using lemma `phy_mem_unchanged_memory_invariant_read_side_effect_transformers`,

Using lemma `phy_mem_unchanged_memory_invariant_write_side_effect_transformers`,

Rewriting using `unchanged_memory_invariant_union_transformers`, matching in `*`,

we get 2 subgoals:

C Proof scripts

phy_mem_plain_memory.7.1:

{-1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_write_side_effect_super_transformers(phy_mem, in_memory(min, max)))
{-2}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_read_side_effect_super_transformers(phy_mem, in_memory(min, max)))
{-3}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_read_transformers(phy_mem, in_memory(min, max)), in_memory(min, max))
{-4}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], oact', in_memory(min, max))
{1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], (oact' ∪ memory_read_transformers(phy_mem, in_memory(min, max))))
{2}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], ((oact' ∪ memory_read_transformers(phy_mem, in_memory(min, max))))

Rewriting using unchanged_memory_invariant_union_transformers, matching in *,

This completes the proof of phy_mem_plain_memory.7.1.

phy_mem_plain_memory.7.2:

{-1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_write_side_effect_super_transformers(phy_mem, in_memory(min, max)))
{-2}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_read_side_effect_super_transformers(phy_mem, in_memory(min, max)))
{-3}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory[min, max]], memory_read_transformers(phy_mem, in_memory(min, max)), in_memory(min, max))
{-4}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], oact', in_memory(min, max))
{1}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], (memory_read_side_effect_super_transformers(phy_mem, in_memory(min, max))))
{2}	unchanged_memory_invariant?(phy_mem, fullset[Physical_memory], ((oact' ∪ memory_read_transformers(phy_mem, in_memory(min, max))))

Rewriting using unchanged_memory_invariant_union_transformers, matching in *,

This completes the proof of phy_mem_plain_memory.7.2.

Q.E.D.

C.164 Proofs for Phy_Mem_Blessing_Data (challenge-phymem.pvs)

C.164.1 Phy_Mem_Blessing_Data.in_memory_blessed_memory

Terse proof for `in_memory_blessed_memory`.

`in_memory_blessed_memory`:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{idt}: (\text{interpreted_data_type?}[\text{Data}])): \\ \text{in_memory?}(\text{idt}, \text{addr}, \text{min}, \text{max}) \supset \text{in_blessed_memory?}(\text{idt}, \text{addr}, \text{in_memory}(\text{min}, \text{max}))$$

Installing automatic rewrites from: `in_memory?` `in_blessed_memory?` `subset?` `member` `address_block`
`in_memory` + `<` `≤`

Repeatedly Skolemizing and flattening,

Simplifying, rewriting, and recording with decision procedures,

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `in_memory_blessed_memory`.

Q.E.D.

C.165 Proofs for Phy_Mem_Challenge_Read_Other (challenge-phymem.pvs)

C.165.1 Phy_Mem_Challenge_Read_Other.read_write_other_ok

Terse proof for `read_write_other_ok`.

`read_write_other_ok`:

$$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data1}: \text{Data1}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{s}: \text{Physical_memory}[\text{min}, \text{max}]): \\ \text{in_memory?}(\text{dt1}, \text{addr1}, \text{min}, \text{max}) \wedge \\ \text{in_memory?}(\text{dt2}, \text{addr2}, \text{min}, \text{max}) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{valid_in_mem}(\text{phy_mem}, \text{dt2})(\text{addr2})(\text{s}) \\ \supset \\ \text{OK?}((\text{write_data}(\text{phy_mem}, \text{dt1})(\text{addr1}, \text{data1}) \#\# \text{read_data}(\text{phy_mem}, \text{dt2})(\text{addr2}))(\text{s}))$$

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: `unchanged_memory_invariant_empty` `emptyset_is_empty?`

Using lemma `phy_mem_plain_memory`,

Simplifying, rewriting, and recording with decision procedures,

Using lemma `plain_memory_read_write_other_ok`[`Physical_memory`, `Data1`, `Data2`],

Installing automatic rewrites from: `fullset!` `union_empty_left` `phy_pm` `read_data` `write_data`
`valid_in_mem`

Simplifying, rewriting, and recording with decision procedures,

Keeping (-4 -5 1) and hiding *,

Using lemma `in_memory_blessed_memory`[`Data1`, `min`, `max`],

Using lemma `in_memory_blessed_memory`[`Data2`, `min`, `max`],

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `read_write_other_ok`.

Q.E.D.

C.165.2

Phy_Mem_Challenge_Read_Other.read_write_other_res_TCC1

Terse proof for read_write_other_res_TCC1.

read_write_other_res_TCC1:

$$\begin{array}{l}
 \{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data1}: \text{Data1}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\

C.165.8 *Phy_Mem_Challenge_Read_Other.read_read*

Terse proof for `read_read`.

`read_read`:

$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), s: \text{Physical_memory}[\text{min}, \text{max}]): \\ \text{in_memory?}(\text{dt1}, \text{addr1}, \text{min}, \text{max}) \wedge \\ \text{in_memory?}(\text{dt2}, \text{addr2}, \text{min}, \text{max}) \wedge \\ \text{valid_in_mem}(\text{phy_mem}, \text{dt1})(\text{addr1})(s) \wedge \text{valid_in_mem}(\text{phy_mem}, \text{dt2})(\text{addr2})(s) \\ \supset \\ \text{data}(\text{read_data}(\text{phy_mem}, \text{dt1})(\text{addr1}) \text{##} \text{read_data}(\text{phy_mem}, \text{dt2})(\text{addr2}))(s) = \\ \text{data}(\text{read_data}(\text{phy_mem}, \text{dt2})(\text{addr2}))(s))$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: `unchanged_memory_invariant_empty` `emptyset_is_empty?`
`union_empty_left` `fullset` `phy_pm`
 Using lemma `phy_mem_plain_memory`,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma `plain_memory_read_read`[`Physical_memory`, `Data1`, `Data2`],
 Installing automatic rewrites from: (`read_data!` `write_data!` `valid_in_mem!`)
 Simplifying, rewriting, and recording with decision procedures,
 Rewriting using `in_memory_blessed_memory`[`Data1`, `min`, `max`], matching in *,
 Rewriting using `in_memory_blessed_memory`[`Data2`, `min`, `max`], matching in *,
 This completes the proof of `read_read`.
 Q.E.D.

C.166 Proofs for *Phy_Mem_Challenge_Read_Same* (*challenge-phymem.pvs*)

C.166.1 *Phy_Mem_Challenge_Read_Same.read_write_ok*

Terse proof for `read_write_ok`.

`read_write_ok`:

$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{data}: \text{Data}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \\ s: \text{Physical_memory}[\text{min}, \text{max}]): \\ \text{in_memory?}(\text{dt}, \text{addr}, \text{min}, \text{max}) \supset \\ \text{OK?}(\text{write_data}(\text{phy_mem}, \text{dt})(\text{addr}, \text{data}) \text{##} \text{read_data}(\text{phy_mem}, \text{dt})(\text{addr}))(s))$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: `unchanged_memory_invariant_empty` `emptyset_is_empty?`

Using lemma `phy_mem_plain_memory`,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma `plain_memory_read_write_ok` [`Physical_memory`, `Data`],
 Simplifying, rewriting, and recording with decision procedures,
 Hiding formulas: -2,
 Expanding the definition of `phy_pm`,
 Using lemma `in_memory_blessed_memory`,
 Simplifying, rewriting, and recording with decision procedures,
 Expanding the definition of `fullset`,
 Expanding the definition of `write_data`,
 Expanding the definition of `read_data`,
 which is trivially true.
 This completes the proof of `read_write_ok`.
 Q.E.D.

C.166.2 `Phy_Mem_Challenge_Read_Same.read_write_res_TCC1`

Terse proof for `read_write_res_TCC1`.

`read_write_res_TCC1`:

```
{1}  ∃ (addr: Address, data: Data, dt: (interpreted_data_type?[Data]),
      s: Physical_memory [min, max]):
  in_memory?(dt, addr, min, max) ⊃
  OK?[Physical_memory [min, max], Data]
  ((##[Physical_memory [min, max], Unit, Data]
    (write_data[Physical_memory [min, max], Data]
      (phy_mem [min, max], dt)(addr, data),
      read_data[Physical_memory [min, max], Data]
        (phy_mem [min, max], dt)(addr))))
  (s)
```

Repeatedly Skolemizing and flattening,
 Rewriting using `read_write_ok`, matching in *,
 This completes the proof of `read_write_res_TCC1`.
 Q.E.D.

C.166.3 `Phy_Mem_Challenge_Read_Same.read_write_res`

Terse proof for `read_write_res`.

`read_write_res`:

```
{1}  ∃ (addr: Address, data1: Data, dt: (interpreted_data_type?[Data]),
      s: Physical_memory [min, max]):
  in_memory?(dt, addr, min, max) ⊃
  data((write_data(phy_mem, dt)(addr, data1) ## read_data(phy_mem, dt)(addr))(s))
  = data1
```

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: `unchanged_memory_invariant_empty` `emptyset_is_empty?`
 Using lemma `phy_mem_plain_memory`,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma `plain_memory_read_write_res` [`Physical_memory`, `Data`],

Installing automatic rewrites from: phy_pm fullset in_memory_blessed_memory read_data write_data
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of read_write_res.
Q.E.D.

C.167 Proofs for Phy_Mem_Properties (challenge-phymem.pvs)

C.167.1 Phy_Mem_Properties.min_TCC1

Terse proof for min_TCC1.

min_TCC1:

{1} $\exists (x: \text{Memory_Address}): \text{TRUE}$

Instantiating the top quantifier in 1 with the terms: Mem(0),
Expanding the definition of Mem,
which is trivially true.
This completes the proof of min_TCC1.
Q.E.D.

C.167.2 Phy_Mem_Properties.phy_mem_write_transformers_ok

Terse proof for phy_mem_write_transformers_ok.

phy_mem_write_transformers_ok:

{1} transformers_ok?(fullset[Physical_memory],
memory_write_transformers(phy_mem, in_memory(min, max)))

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of phy_mem_write_transformers_ok.
Q.E.D.

C.167.3 Phy_Mem_Properties.phy_mem_read_transformers_ok

Terse proof for phy_mem_read_transformers_ok.

phy_mem_read_transformers_ok:

{1} transformers_ok?(fullset[Physical_memory],
memory_read_transformers(phy_mem, in_memory(min, max)))

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of phy_mem_read_transformers_ok.
Q.E.D.

C.167.4

Phy_Mem_Properties.phy_mem_read_side_effects_transformers_ok

Terse proof for phy_mem_read_side_effects_transformers_ok.

phy_mem_read_side_effects_transformers_ok:

{1}	transformers_ok?(fullset [Physical_memory], memory_read_side_effect_super_transformers(phy_mem, in_memory(min, ma
-----	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_read_side_effects_transformers_ok.

Q.E.D.

C.167.5

Phy_Mem_Properties.phy_mem_write_side_effects_transformers_ok

Terse proof for phy_mem_write_side_effects_transformers_ok.

phy_mem_write_side_effects_transformers_ok:

{1}	transformers_ok?(fullset [Physical_memory], memory_write_side_effect_super_transformers(phy_mem, in_memory(min, ma
-----	---

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_write_side_effects_transformers_ok.

Q.E.D.

C.167.6

Phy_Mem_Properties.phy_mem_unchanged_memory_invariant_read_transformers

Terse proof for phy_mem_unchanged_memory_invariant_read_transformers.

phy_mem_unchanged_memory_invariant_read_transformers:

{1}	unchanged_memory_invariant?(phy_mem, fullset [Physical_memory], memory_read_transformers(phy_mem, in_memory(min, max)), in_memory(min, max))
-----	--

Expanding the definition of unchanged_memory_invariant?,

Applying propositional simplification,

we get 2 subgoals:

phy_mem_unchanged_memory_invariant_read_transformers.1:

{1}	transformer_invariant?(fullset [Physical_memory], memory_read_transformers(phy_mem, in_memory(min, max)))
-----	--

Rewriting using transformer_invariant_truth, matching in *,

This completes the proof of phy_mem_unchanged_memory_invariant_read_transformers.1.

phy_mem_unchanged_memory_invariant_read_transformers.2:

$\{1\} \quad \forall (s: \text{Physical_memory}[\text{min}, \text{max}],$ $q: [\text{Physical_memory}[\text{min}, \text{max}] \rightarrow \text{SuperResult}[\text{Physical_memory}[\text{min}, \text{max}]]) ,$ $a: \text{Address}):$ $\text{fullset}[\text{Physical_memory}](s) \wedge$ $\text{memory_read_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max}))(q) \wedge$ $\text{in_memory}(\text{min}, \text{max})(a) \wedge$ $\text{OK?}(q(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s))))$ \supset $\text{data}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s)))) =$ $\text{data}(\text{memory_read}(\text{phy_mem})(a)(s))$
--

Expanding the definition of memory_read_transformers,

Repeatedly Skolemizing and flattening,

Replacing using formula -3,

Keeping (-2 -4 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_unchanged_memory_invariant_read_transformers.2.

Q.E.D.

C.167.7

Phy_Mem_Properties.phy_mem_unchanged_memory_invariant_read_side_effect_trans

Terse proof for phy_mem_unchanged_memory_invariant_read_side_effect_transformers.

phy_mem_unchanged_memory_invariant_read_side_effect_transformers:

$\{1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}],$ $\text{memory_read_side_effect_super_transformers}(\text{phy_mem},$ $\text{in_memory}(\text{min}, \text{max}))$ $\text{in_memory}(\text{min}, \text{max}))$
--

Expanding the definition of unchanged_memory_invariant?,

Applying propositional simplification,

we get 2 subgoals:

phy_mem_unchanged_memory_invariant_read_side_effect_transformers.1:

$\{1\} \quad \text{transformer_invariant?}(\text{fullset}[\text{Physical_memory}],$ $\text{memory_read_side_effect_super_transformers}(\text{phy_mem},$ $\text{in_memory}(\text{min}, \text{max}))$
--

Rewriting using transformer_invariant_truth, matching in *,

This completes the proof of phy_mem_unchanged_memory_invariant_read_side_effect_transformers.1.

phy_mem_unchanged_memory_invariant_read_side_effect_transformers.2:

$\{1\} \quad \forall (s: \text{Physical_memory}[\text{min}, \text{max}],$ $q: [\text{Physical_memory}[\text{min}, \text{max}] \rightarrow \text{SuperResult}[\text{Physical_memory}[\text{min}, \text{max}]]],$ $a: \text{Address}):$ $\text{fullset}[\text{Physical_memory}](s) \wedge$ $\text{memory_read_side_effect_super_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max}))(q) \wedge$ $\text{in_memory}(\text{min}, \text{max})(a) \wedge$ $\text{OK?}(q(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s))))$ \supset $\text{data}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s)))) =$ $\text{data}(\text{memory_read}(\text{phy_mem})(a)(s))$
--

Expanding the definition of memory_read_side_effect_super_transformers,

Repeatedly Skolemizing and flattening,

Replacing using formula -4,

Keeping (-2 -3 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_unchanged_memory_invariant_read_side_effect_transformers.2.

Q.E.D.

C.167.8

Phy_Mem_Properties.phy_mem_unchanged_memory_invariant_write_side_eff

Terse proof for phy_mem_unchanged_memory_invariant_write_side_effect_transformers.

phy_mem_unchanged_memory_invariant_write_side_effect_transformers:

$\{1\} \quad \text{unchanged_memory_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}],$ $\text{memory_write_side_effect_super_transformers}(\text{phy_mem},$ $\text{in_memory}(\text{min}, \text{max}))$
--

Expanding the definition of unchanged_memory_invariant?,

Applying propositional simplification,

we get 2 subgoals:

phy_mem_unchanged_memory_invariant_write_side_effect_transformers.1:

$\{1\} \quad \text{transformer_invariant?}(\text{fullset}[\text{Physical_memory}],$ $\text{memory_write_side_effect_super_transformers}(\text{phy_mem},$ $\text{in_memory}(\text{min},$
--

Rewriting using transformer_invariant_truth, matching in *,

This completes the proof of phy_mem_unchanged_memory_invariant_write_side_effect_transformers.1.

phy_mem_unchanged_memory_invariant_write_side_effect_transformers.2:

$\{1\} \quad \forall (s: \text{Physical_memory}[\text{min}, \text{max}],$ $q: [\text{Physical_memory}[\text{min}, \text{max}] \rightarrow \text{SuperResult}[\text{Physical_memory}[\text{min}, \text{max}]]],$ $a: \text{Address}):$ $\text{fullset}[\text{Physical_memory}](s) \wedge$ $\text{memory_write_side_effect_super_transformers}(\text{phy_mem}, \text{in_memory}(\text{min}, \text{max}))(q) \wedge$ $\text{in_memory}(\text{min}, \text{max})(a) \wedge$ $\text{OK?}(q(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(s)) \wedge$ $\text{OK?}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s))))$ \supset $\text{data}(\text{memory_read}(\text{phy_mem})(a)(\text{state}(q(s)))) =$ $\text{data}(\text{memory_read}(\text{phy_mem})(a)(s))$

Expanding the definition of memory_write_side_effect_super_transformers,

Repeatedly Skolemizing and flattening,

Replacing using formula -4,

Keeping (-2 -3 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_unchanged_memory_invariant_write_side_effect_transformers.2.

Q.E.D.

C.167.9

Phy_Mem_Properties.phy_mem_unchanged_memory_write_invariant

Terse proof for phy_mem_unchanged_memory_write_invariant.

phy_mem_unchanged_memory_write_invariant:

$\{1\} \quad \text{unchanged_memory_write_invariant?}(\text{phy_mem}, \text{fullset}[\text{Physical_memory}], \text{in_memory}(\text{min}, \text{max}))$
--

Expanding the definition of unchanged_memory_write_invariant?,

Expanding the definition of unchanged_memory_invariant?,

Expanding the definition of singleton,

Repeatedly Skolemizing and flattening,

Applying propositional simplification,

we get 2 subgoals:

phy_mem_unchanged_memory_write_invariant.1:

$\{-1\} \quad b' < \text{max_byte}$ $\{-2\} \quad \text{in_memory}(\text{min}, \text{max})(\text{waddr}')$ <hr/> $\{1\} \quad \text{transformer_invariant?}(\text{fullset}[\text{Physical_memory}],$ $\{y \mid y = \text{expr_2_super}(\text{memory_write}(\text{phy_mem})(\text{waddr}', b'))\})$
--

Rewriting using transformer_invariant_truth, matching in *,

This completes the proof of phy_mem_unchanged_memory_write_invariant.1.

phy_mem_unchanged_memory_write_invariant.2:

<pre> {-1} b' < max_byte {-2} in_memory(min, max)(waddr') </pre>
<pre> {1} ∀ (s: Physical_memory[min, max], q: [Physical_memory[min, max] → SuperResult[Physical_memory[min, max]]], a: Address): fullset[Physical_memory](s) ∧ q = expr_2_super(memory_write(phy_mem)(waddr', b')) ∧ remove(waddr', in_memory(min, max))(a) ∧ OK?(q(s)) ∧ OK?(memory_read(phy_mem)(a)(s)) ∧ OK?(memory_read(phy_mem)(a)(state(q(s)))) ⊃ data(memory_read(phy_mem)(a)(state(q(s)))) = data(memory_read(phy_mem)(a)(s)) </pre>

Repeatedly Skolemizing and flattening,

Replacing using formula -2,

Keeping (-3 -8 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_unchanged_memory_write_invariant.2.

Q.E.D.

C.167.10

Phy_Mem_Properties.phy_mem_changed_memory_invariant

Terse proof for phy_mem_changed_memory_invariant.

phy_mem_changed_memory_invariant:

<pre> {1} changed_memory_invariant?(phy_mem, fullset[Physical_memory], in_memory(min, max)) </pre>

Expanding the definition of changed_memory_invariant?,

Rewriting using transformer_invariant_truth, matching in *,

Rewriting using transformer_invariant_truth, matching in *,

Repeatedly Skolemizing and flattening,

Keeping (-3 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of phy_mem_changed_memory_invariant.

Q.E.D.

C.168 Proofs for Physical_Memory (physical_memory.pvs)

This theory contains no provable formal statements.

C.169 Proofs for Physical_Memory_Corollaries (physical_memory.pvs)

C.169.1

Physical_Memory_Corollaries.physical_read_ok_next_state_TCC1

Terse proof for physical_read_ok_next_state_TCC1.

physical_read_ok_next_state_TCC1:

$\{1\} \quad \forall (a: \text{Address}, s: \text{Physical_memory}[\text{min}, \text{max}]):$ $\text{OK?}(\text{physical_read}(a)(s)) \supset$ $\text{OK?}[\text{Physical_memory}[\text{min}, \text{max}], \text{Byte}](\text{physical_read}[\text{min}, \text{max}](a)(s)) \vee$ $\text{Exception?}[\text{Physical_memory}[\text{min}, \text{max}], \text{Byte}](\text{physical_read}[\text{min}, \text{max}](a)(s))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of physical_read_ok_next_state_TCC1.

Q.E.D.

C.169.2 Physical_Memory_Corollaries.physical_read_ok_next_state

Terse proof for physical_read_ok_next_state.

physical_read_ok_next_state:

$\{1\} \quad \forall (a: \text{Address}, s: \text{Physical_memory}[\text{min}, \text{max}]):$ $\text{OK?}(\text{physical_read}(a)(s)) \supset \text{state}(\text{physical_read}(a)(s)) = s$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of physical_read_ok_next_state.

Q.E.D.

C.169.3

Physical_Memory_Corollaries.physical_write_ok_next_state_TCC1

Terse proof for physical_write_ok_next_state_TCC1.

physical_write_ok_next_state_TCC1:

$\{1\} \quad \forall (a: \text{Address}, b: \text{Byte}, s: \text{Physical_memory}[\text{min}, \text{max}]):$ $\text{OK?}(\text{physical_write}(a, b)(s)) \supset$ $\text{OK?}[\text{Physical_memory}[\text{min}, \text{max}], \text{Unit}](\text{physical_write}[\text{min}, \text{max}](a, b)(s)) \vee$ $\text{Exception?}[\text{Physical_memory}[\text{min}, \text{max}], \text{Unit}](\text{physical_write}[\text{min}, \text{max}](a, b)(s))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of physical_write_ok_next_state_TCC1.

Q.E.D.

C.169.4 Physical_Memory_Corollaries.physical_write_ok_next_state

Terse proof for physical_write_ok_next_state.

physical_write_ok_next_state:

$$\{1\} \quad \forall (a: \text{Address}, b: \text{Byte}, s: \text{Physical_memory}[\text{min}, \text{max}]):$$
$$\text{OK?}(\text{physical_write}(a, b)(s)) \supset$$
$$\text{state}(\text{physical_write}(a, b)(s)) = s \text{ WITH } [(a) := b]$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `physical_write_ok_next_state`.
Q.E.D.

C.169.5 Physical_Memory_Corollaries.physical_read_ok_get_data

Terse proof for `physical_read_ok_get_data`.

physical_read_ok_get_data:

$$\{1\} \quad \forall (a: \text{Address}, s: \text{Physical_memory}[\text{min}, \text{max}]):$$
$$\text{OK?}(\text{physical_read}(a)(s)) \supset \text{data}(\text{physical_read}(a)(s)) = s(a)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `physical_read_ok_get_data`.
Q.E.D.

C.170 Proofs for Physical_Memory_Properties (physical_memory.pvs)

C.170.1 Physical_Memory_Properties.physical_read_ok

Terse proof for `physical_read_ok`.

physical_read_ok:

$$\{1\} \quad \forall (a: \text{Address}, s: \text{Physical_memory}[\text{min}, \text{max}]):$$
$$\text{in_memory}(\text{min}, \text{max})(a) \supset \text{OK?}(\text{physical_read}(a)(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `physical_read_ok`.
Q.E.D.

C.170.2 Physical_Memory_Properties.physical_write_ok

Terse proof for `physical_write_ok`.

physical_write_ok:

$$\{1\} \quad \forall (a: \text{Address}, b: \text{Byte}, s: \text{Physical_memory}[\text{min}, \text{max}]):$$
$$\text{in_memory}(\text{min}, \text{max})(a) \supset \text{OK?}(\text{physical_write}(a, b)(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `physical_write_ok`.
Q.E.D.

C.171 Proofs for Plain_Mem_Properties (plain_memory.pvs)

C.171.1 Plain_Mem_Properties.plain_mem_write_list_read_list_TCC1

Terse proof for plain_mem_write_list_read_list_TCC1.

plain_mem_write_list_read_list_TCC1:

$\{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory}[\text{State}], s: \text{State, size: nat, bl: list}[\text{Byte}]):$ $\text{OK?}(\text{memory_write_list}(\text{pm}'\text{mem})(\text{addr}, \text{bl})(s)) \wedge$ $(\text{address_block}(\text{addr}, \text{size}) \subseteq \text{pm}'\text{rw_addr}) \wedge$ $\text{pm}'\text{states}(s) \wedge \text{plain_memory?}(\text{pm}) \wedge \text{size} = \text{length}(\text{bl})$ \supset $\text{OK?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](\text{pm}'\text{mem})(\text{addr}, \text{bl})(s)) \vee$ $\text{Exception?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](\text{pm}'\text{mem})(\text{addr}, \text{bl})(s))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_mem_write_list_read_list_TCC1.

Q.E.D.

C.171.2 Plain_Mem_Properties.plain_mem_write_list_read_list

Terse proof for plain_mem_write_list_read_list.

plain_mem_write_list_read_list:

$\{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory}[\text{State}], s: \text{State, size: nat, bl: list}[\text{Byte}]):$ $\text{size} = \text{length}(\text{bl}) \wedge$ $\text{plain_memory?}(\text{pm}) \wedge$ $\text{pm}'\text{states}(s) \wedge$ $(\text{address_block}(\text{addr}, \text{size}) \subseteq \text{pm}'\text{rw_addr}) \wedge$ $\text{OK?}(\text{memory_write_list}(\text{pm}'\text{mem})(\text{addr}, \text{bl})(s)) \wedge$ $\text{OK?}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})$ $\quad \quad \quad (\text{state}(\text{memory_write_list}(\text{pm}'\text{mem})(\text{addr}, \text{bl})(s))))$ \supset $\text{data}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})$ $\quad \quad \quad (\text{state}(\text{memory_write_list}(\text{pm}'\text{mem})(\text{addr}, \text{bl})(s))))$ $= \text{bl}$
--

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: subset_bigger_union_right

Using lemma unchanged_memory_read_list_write_list,

Replacing using formula -2,

Installing automatic rewrites from: plain_memory_transformers_ok_write_block transformers_ok_union_transformers plain_memory_transformers_ok_write_side_effects_block plain_memory_transformers_ok_read_block plain_memory_transformers_ok_read_side_effects_block plain_memory_side_effect_content_unchanged_read_block plain_memory_side_effect_content_unchanged_write_block plain_memory_changed_block plain_memory_unchanged_block plain_memory_unchanged_invariant

Installing automatic rewrites from: unchanged_memory_invariant_union_transformers plain_memory_unchanged_read_block plain_memory_unchanged_read_side_effect_block plain_memory_unchanged_write_side_effect_block

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of plain_mem_write_list_read_list.

Q.E.D.

C.171.3 Plain_Mem_Properties.plain_mem_q_read_list_TCC1

Terse proof for `plain_mem_q_read_list_TCC1`.

`plain_mem_q_read_list_TCC1`:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]) : \\ \text{OK?}(q(s)) \wedge \text{OK?}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})(s)) \supset \\ \text{OK?}[\text{State}](q(s)) \vee \text{abnormal?}[\text{State}](q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `plain_mem_q_read_list_TCC1`.
Q.E.D.

C.171.4 Plain_Mem_Properties.plain_mem_q_read_list

Terse proof for `plain_mem_q_read_list`.

`plain_mem_q_read_list`:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]) : \\ \text{OK?}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})(s)) \wedge \\ \text{OK?}(q(s)) \wedge \\ \text{OK?}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})(\text{state}(q(s)))) \wedge \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{unchanged_memory_invariant?}(\text{pm}'\text{mem}, \text{pm}'\text{states}, \text{singleton}(q), \\ \text{address_block}(\text{addr}, \text{size})) \\ \wedge \text{pm}'\text{states}(s) \wedge (\text{address_block}(\text{addr}, \text{size}) \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \\ \supset \\ \text{data}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})(\text{state}(q(s)))) = \\ \text{data}(\text{memory_read_list}(\text{pm}'\text{mem})(\text{addr}, \text{size})(s))$$

Repeatedly Skolemizing and flattening,
Installing automatic rewrites from: `union_subset1 subset_reflexive`
Using lemma `unchanged_memory_read_list[State]`,
Installing automatic rewrites from: `transformers_ok_union_transformers plain_memory_side_effect_content_uncha`

{1}	<code>side_effect_content_unchanged(address_block(addr', size(uidt(dt'))), pm!'states,</code> <code>memory_write_side_effect(pm!'mem))</code>
{2}	<code>OK?(memory_write_list(pm!'mem)(addr', to_byte(dt')(data', addr'))(s'))</code>

Using lemma `plain_memory_side_effect_content_unchanged_write_block[State]`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `plain_memory_write_data_ok.3`.

Q.E.D.

C.172.5

Plain_Mem_Properties_2.plain_memory_write_data_valid_TCC1

Terse proof for `plain_memory_write_data_valid_TCC1`.

plain_memory_write_data_valid_TCC1:

$$\frac{\{1\} \quad \forall (\text{addr}: \text{Address}, \text{data}: \text{Data}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}):}{\text{in_blessed_memory?}(\text{dt}, \text{addr}, \text{pm}'\text{rw_addr}) \wedge \text{pm}'\text{states}(\text{s}) \wedge \text{plain_memory?}(\text{pm}) \supset \text{OK?}[\text{State}, \text{Unit}](\text{write_data}[\text{State}, \text{Data}](\text{pm}, \text{dt})(\text{addr}, \text{data})(\text{s})) \vee \text{Exception?}[\text{State}, \text{Unit}](\text{write_data}[\text{State}, \text{Data}](\text{pm}, \text{dt})(\text{addr}, \text{data})(\text{s}))}$$

Repeatedly Skolemizing and flattening,

Using lemma plain_memory_write_data_ok,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of plain_memory_write_data_valid_TCC1.

Q.E.D.

C.172.6 Plain_Mem_Properties_2.plain_memory_write_data_valid

Terse proof for plain_memory_write_data_valid.

plain_memory_write_data_valid:

$$\frac{\{1\} \quad \forall (\text{addr}: \text{Address}, \text{data}: \text{Data}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}):}{\text{plain_memory?}(\text{pm}) \wedge \text{pm}'\text{states}(\text{s}) \wedge \text{in_blessed_memory?}(\text{dt}, \text{addr}, \text{pm}'\text{rw_addr}) \supset \text{valid_in_mem}(\text{pm}, \text{dt})(\text{addr})(\text{state}(\text{write_data}(\text{pm}, \text{dt})(\text{addr}, \text{data})(\text{s})))}$$

Repeatedly Skolemizing and flattening,

Using lemma plain_memory_write_data_ok,

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of valid_in_mem,

Expanding the definition of valid_in_mem,

Expanding the definition of write_data,

Expanding the definition of write_data,

Installing automatic rewrites from: length_to_byte valid_to_byte subset_bigger_union_right

Using lemma plain_mem_write_list_read_list[State],

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

we get 2 subgoals:

plain_memory_write_data_valid.1:

{-1}	plain_memory?(pm')
{-2}	pm' states(s')
{-3}	OK?(memory_write_list(pm' mem)(addr', to_byte(dt')(data', addr'))(s'))
{-4}	data(memory_read_list(pm' mem)(addr', size(uidt(dt')) <div style="text-align: right; margin-right: 20px;">(state(memory_write_list(pm' mem) <div style="text-align: right; margin-right: 20px;">(addr', to_byte(dt')(data', addr')) <div style="text-align: right; margin-right: 20px;">(s'))))</div> </div> </div>
	= to_byte(dt')(data', addr')
{-5}	interpreted_data_type?[Data](dt')
{-6}	in_blessed_memory?(dt', addr', pm' rw_addr)
{-7}	OK?(memory_read_list(pm' mem)(addr', size(uidt(dt')) <div style="text-align: right; margin-right: 20px;">(state(memory_write_list(pm' mem) <div style="text-align: right; margin-right: 20px;">(addr', to_byte(dt')(data', addr')) <div style="text-align: right; margin-right: 20px;">(s'))))</div> </div> </div>
{1} dt' uidt' valid? <div style="text-align: right; margin-right: 20px;">(data(memory_read_list(pm' mem)(addr', size(uidt(dt')) <div style="text-align: right; margin-right: 20px;">(state(memory_write_list(pm' mem) <div style="text-align: right; margin-right: 20px;">(addr', to_byte(dt')(data', addr')) <div style="text-align: right; margin-right: 20px;">(s')))),</div> </div> </div> </div>	
addr')	

Replacing using formula -4,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of plain_memory_write_data_valid.1.

plain_memory_write_data_valid.2:

{-1}	plain_memory?(pm')
{-2}	pm' states(s')
{-3}	OK?(memory_write_list(pm' mem)(addr', to_byte(dt')(data', addr'))(s'))

Q.E.D.

C.173.2

Plain_Mem_Properties_3.plain_memory_read_write_other_res_TCC1

Terse proof for `plain_memory_read_write_other_res_TCC1`.

`plain_memory_read_write_other_res_TCC1`:

{1}	\forall (<code>addr1, addr2: Address, data1: Data1, dt1: (interpreted_data_type?[Data1]),</code> <code>dt2: (interpreted_data_type?[Data2]), pm: Plain_Memory[State], s: State):</code> <code>valid_in_mem(pm, dt2)(addr2)(s) ∧</code> <code>blocks_disjoint?(addr1, size(uidt(dt1)), addr2, size(uidt(dt2))) ∧</code> <code>in_blessed_memory?(dt2, addr2, (pm' ro_addr ∪ pm' rw_addr)) ∧</code> <code>in_blessed_memory?(dt1, addr1, pm' rw_addr) ∧ pm' states(s) ∧ plain_memory?(pm)</code> <code>⊃</code> <code>OK?[State, Data2]</code> <code>((##[State, Unit, Data2]</code> <code> (write_data[State, Data1](pm, dt1)(addr1, data1),</code> <code> read_data[State, Data2](pm, dt2)(addr2)))</code> <code>(s))</code>
-----	--

Repeatedly Skolemizing and flattening,

Using lemma `plain_memory_read_write_other_ok`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `plain_memory_read_write_other_res_TCC1`.

Q.E.D.

C.173.3**Plain_Mem_Properties_3.plain_memory_read_write_other_res_TCC2**

Terse proof for plain_memory_read_write_other_res_TCC2.

plain_memory_read_write_other_res_TCC2:

$$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}): \\ \text{valid_in_mem}(\text{pm}, \text{dt2})(\text{addr2})(\text{s}) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{in_blessed_memory?}(\text{dt2}, \text{addr2}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{in_blessed_memory?}(\text{dt1}, \text{addr1}, \text{pm}'\text{rw_addr}) \wedge \text{pm}'\text{states}(\text{s}) \wedge \text{plain_memory?}(\text{pm}) \\ \supset \text{OK?}[\text{State}, \text{Data2}](\text{read_data}[\text{State}, \text{Data2}](\text{pm}, \text{dt2})(\text{addr2})(\text{s}))$$

Repeatedly Skolemizing and flattening,

Using lemma plain_memory_read_data_ok[State, Data2],

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of plain_memory_read_write_other_res_TCC2.

Q.E.D.

C.173.4**Plain_Mem_Properties_3.plain_memory_read_write_other_res**

Terse proof for plain_memory_read_write_other_res.

plain_memory_read_write_other_res:

$$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data1}: \text{Data1}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{pm}'\text{states}(\text{s}) \wedge \\ \text{in_blessed_memory?}(\text{dt1}, \text{addr1}, \text{pm}'\text{rw_addr}) \wedge \\ \text{in_blessed_memory?}(\text{dt2}, \text{addr2}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{valid_in_mem}(\text{pm}, \text{dt2})(\text{addr2})(\text{s}) \\ \supset \\ \text{data}(\text{write_data}(\text{pm}, \text{dt1})(\text{addr1}, \text{data1}) \text{##} \text{read_data}(\text{pm}, \text{dt2})(\text{addr2}))(\text{s}) = \\ \text{data}(\text{read_data}(\text{pm}, \text{dt2})(\text{addr2})(\text{s}))$$

Installing automatic rewrites from: (## expr_2_super expr_2_super_res)

Repeatedly Skolemizing and flattening,

Case splitting on OK?(write_data(pm!1, dt1!1)(addr1!1, data1!1)(s!1)),

we get 2 subgoals:

plain_memory_read_write_other_res.1:

{-1}	OK?(write_data(pm', dt1')(addr1', data1')(s'))

Terse proof for pm_q_prop_TCC1.

pm_q_prop_TCC1:

<p>{1} $\forall (res: StmtResult[State]):$ OK?(res) \supset OK?[State](res) \vee Break?[State](res) \vee Continue?[State](res) \vee Return?[State](res) \vee Switch?[State](res) \vee Default?[State](res) \vee Exception?[State](res)</p>	<hr style="border: 0.5px solid black;"/>
--	--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of pm_q_prop_TCC1.
 Q.E.D.

C.175.2 Plain_Mem_Rewrites1.pm_q_prop_ok_stmt

Terse proof for pm_q_prop_ok_stmt.

pm_q_prop_ok_stmt:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}[\text{State}], s: \text{State}, q: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{plain_memory?}(pm) \wedge \text{pm_q_prop}(pm)(q(s)) \supset \text{OK?}(q(s))$$

Expanding the definition of pm_q_prop,
 Repeatedly Skolemizing and flattening,
 This completes the proof of pm_q_prop_ok_stmt.
 Q.E.D.

C.176 Proofs for Plain_Mem_Rewrites2 (plain_memory_rewrites.pvs)

C.176.1 Plain_Mem_Rewrites2.in_blessed_memory_rw_ro

Terse proof for in_blessed_memory_rw_ro.

in_blessed_memory_rw_ro:

$$\{1\} \quad \forall (addr: \text{Address}, dt: (\text{interpreted_data_type?}[\text{Data}]), pm: \text{Plain_Memory}[\text{State}]):$$

$$\text{in_blessed_memory?}(dt, addr, pm\text{'rw_addr}) \supset$$

$$\text{in_blessed_memory?}(dt, addr, (pm\text{'ro_addr} \cup pm\text{'rw_addr}))$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of in_blessed_memory?,
 Rewriting using subset_bigger_union_right, matching in *,
 This completes the proof of in_blessed_memory_rw_ro.
 Q.E.D.

C.176.2 Plain_Mem_Rewrites2.pm_q_prop_TCC1

Terse proof for pm_q_prop_TCC1.

pm_q_prop_TCC1:

$$\{1\} \quad \forall (res: \text{ExprResult}[\text{State}, \text{Data}]):$$

$$\text{OK?}(res) \supset \text{OK?}[\text{State}, \text{Data}](res) \vee \text{Exception?}[\text{State}, \text{Data}](res)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of pm_q_prop_TCC1.
 Q.E.D.

C.176.3 Plain_Mem_Rewrites2.pm_q_prop_ok_expr

Terse proof for pm_q_prop_ok_expr.

pm_q_prop_ok_expr:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}[\text{State}], s: \text{State}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]):$$

$$\text{plain_memory?}(pm) \wedge \text{pm_q_prop}(pm)(q(s)) \supset \text{OK?}(q(s))$$

Expanding the definition of pm_q_prop,
 Repeatedly Skolemizing and flattening,

This completes the proof of pm_q_prop_ok_expr.
Q.E.D.

C.176.4 Plain_Mem_Rewrites2.pm_q_prop_single_read

Terse proof for pm_q_prop_single_read.
pm_q_prop_single_read:

$\{1\} \quad \forall (\text{addr: Address, dt: (interpreted_data_type? [Data]), pm: Plain_Memory [State], s: State):$ $\text{plain_memory?}(pm) \wedge$ $\text{pm}'\text{states}(s) \wedge$ $\text{in_blessed_memory?}(dt, \text{addr}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge$ $\text{valid_in_mem}(pm, dt)(\text{addr})(s)$ $\supset \text{pm_q_prop}(pm)(\text{read_data}(pm, dt)(\text{addr})(s))$

Expanding the definition of pm_q_prop,
Repeatedly Skolemizing and flattening,
Using lemma plain_memory_transformer_invariant_read_data [State, Data],
Using lemma expr_transformer_invariant_next_ok [State, Data],
Using lemma plain_memory_read_data_ok [State, Data],
Expanding the definition of has_next_state,
Expanding the definition of singleton,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of pm_q_prop_single_read.
Q.E.D.

C.176.5 Plain_Mem_Rewrites2.pm_q_prop_ok_result_single

Terse proof for pm_q_prop_ok_result_single.
pm_q_prop_ok_result_single:

$\{1\} \quad \forall (\text{data: Data, pm: Plain_Memory [State], s: State):$ $\text{pm}'\text{states}(s) \supset \text{pm_q_prop}(pm)(\text{ok_result}(\text{data})(s))$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of pm_q_prop_ok_result_single.
Q.E.D.

C.176.6 Plain_Mem_Rewrites2.plain_memory_write_ok_single

Terse proof for plain_memory_write_ok_single.
plain_memory_write_ok_single:

$\{1\} \quad \forall (\text{addr: Address, data: Data, dt: (interpreted_data_type? [Data]), pm: Plain_Memory [State],$ $s: State):$ $\text{plain_memory?}(pm) \wedge \text{pm}'\text{states}(s) \wedge \text{in_blessed_memory?}(dt, \text{addr}, \text{pm}'\text{rw_addr}) \supset$ $\text{OK?}(\text{write_data}(pm, dt)(\text{addr}, \text{data})(s))$

Repeatedly Skolemizing and flattening,
Rewriting using plain_memory_write_data_ok, matching in *,
This completes the proof of plain_memory_write_ok_single.
Q.E.D.

C.176.7 Plain_Mem_Rewrites2.pm_q_prop_read_TCC1

Terse proof for pm_q_prop_read_TCC1.

pm_q_prop_read_TCC1:

$$\{1\} \quad \forall (dt: (\text{interpreted_data_type?}[\text{Data}]), \text{res}: \text{StmtResult}[\text{State}]):$$

$$\text{OK?}(\text{res}) \supset$$

$$\text{OK?}[\text{State}](\text{res}) \vee$$

$$\text{Break?}[\text{State}](\text{res}) \vee$$

$$\text{Continue?}[\text{State}](\text{res}) \vee$$

$$\text{Return?}[\text{State}](\text{res}) \vee$$

$$\text{Switch?}[\text{State}](\text{res}) \vee \text{Default?}[\text{State}](\text{res}) \vee \text{Exception?}[\text{State}](\text{res})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pm_q_prop_read_TCC1.

Q.E.D.

C.177 Proofs for Plain_Mem_Rewrites3 (plain_memory_rewrites.pvs)

C.177.1 Plain_Mem_Rewrites3.pm_q_prop_read_TCC1

Terse proof for pm_q_prop_read_TCC1.

pm_q_prop_read_TCC1:

$$\{1\} \quad \forall (dt: (\text{interpreted_data_type?}[\text{Data}]), \text{res}: \text{ExprResult}[\text{State}, \text{Data}_q]):$$

$$\text{OK?}(\text{res}) \supset \text{OK?}[\text{State}, \text{Data}_q](\text{res}) \vee \text{Exception?}[\text{State}, \text{Data}_q](\text{res})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pm_q_prop_read_TCC1.

Q.E.D.

C.178 Proofs for Plain_Mem_Rewrites4 (plain_memory_rewrites.pvs)

C.178.1 Plain_Mem_Rewrites4.plain_memory_write_ok_q_expr

Terse proof for plain_memory_write_ok_q_expr.

plain_memory_write_ok_q_expr:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{data}: \text{Data}, dt: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}]$$

$$s: \text{State}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}_q]]):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{in_blessed_memory?}(dt, \text{addr}, \text{pm}'\text{rw_addr}) \wedge \text{pm_q_prop}(\text{pm})(q(s))$$

$$\supset \text{OK?}((q \ \#\# \ \text{write_data}(\text{pm}, dt)(\text{addr}, \text{data}))(s))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of ##,

Expanding the definition of ##,

Expanding the definition of pm_q_prop,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Rewriting using plain_memory_write_data_ok, matching in *,
 This completes the proof of plain_memory_write_ok_q_expr.
 Q.E.D.

C.178.2 Plain_Mem_Rewrites4.pm_q_prop_read_ok_expr

Terse proof for pm_q_prop_read_ok_expr.
 pm_q_prop_read_ok_expr:

$$\frac{\{1\} \quad \forall (\text{addr}: \text{Address}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \\ q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}_q]]): \\ \text{plain_memory?}(\text{pm}) \wedge \text{pm_q_prop_read}(\text{pm}, \text{dt}, \text{addr})(q(s)) \supset \\ \text{OK?}((q \ \#\# \ \text{read_data}(\text{pm}, \text{dt})(\text{addr}))(s))}{}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pm_q_prop_read,
 Expanding the definition of ##,
 Expanding the definition of ##,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pm_q_prop_read_ok_expr.
 Q.E.D.

C.178.3 Plain_Mem_Rewrites4.pm_q_prop_read_pm_q_prop_expr

Terse proof for pm_q_prop_read_pm_q_prop_expr.
 pm_q_prop_read_pm_q_prop_expr:

$$\frac{\{1\} \quad \forall (\text{addr}: \text{Address}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \\ q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}_q]]): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{in_blessed_memory?}(\text{dt}, \text{addr}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{pm_q_prop_read}(\text{pm}, \text{dt}, \text{addr})(q(s)) \\ \supset \text{pm_q_prop}(\text{pm})((q \ \#\# \ \text{read_data}(\text{pm}, \text{dt})(\text{addr}))(s))}{}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Expanding the definition of ##,
 Expanding the definition of pm_q_prop,
 Expanding the definition of pm_q_prop_read,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma plain_memory_transformer_invariant_read_data[State, Data],
 Using lemma expr_transformer_invariant_next_ok[State, Data],
 Expanding the definition of has_next_state,
 Expanding the definition of singleton,
 which is trivially true.
 This completes the proof of pm_q_prop_read_pm_q_prop_expr.
 Q.E.D.

C.178.4 Plain_Mem_Rewrites4.pm_q_prop_read_write_q_expr

Terse proof for pm_q_prop_read_write_q_expr.

pm_q_prop_read_write_q_expr:

$$\{1\} \quad \forall (\text{addr: Address, data: Data, dt: (interpreted_data_type?}[\text{Data}]), \text{pm: Plain_Memory}[\text{State}], \text{s: State, q: [State} \rightarrow \text{ExprResult}[\text{State, Data_q}]]):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{in_blessed_memory?}(\text{dt, addr, pm}'\text{rw_addr}) \wedge \text{pm_q_prop}(\text{pm})(\text{q}(\text{s}))$$

$$\supset \text{pm_q_prop_read}(\text{pm, dt, addr})((\text{q} \ \#\# \ \text{write_data}(\text{pm, dt})(\text{addr, data}))(s))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of ##,

Expanding the definition of ##,

Expanding the definition of pm_q_prop,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of pm_q_prop_read,

Using lemma plain_memory_write_data_ok[State, Data],

Using lemma plain_memory_transformer_invariant_write_data[State, Data],

Using lemma expr_transformer_invariant_next_ok,

Expanding the definition of singleton,

Expanding the definition of has_next_state,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Using lemma plain_memory_read_write_ok[State, Data],

Expanding the definition of ##,

Expanding the definition of ##,

which is trivially true.

This completes the proof of pm_q_prop_read_write_q_expr.

Q.E.D.

C.178.5 Plain_Mem_Rewrites4.pm_q_prop_ok_result_q_expr

Terse proof for pm_q_prop_ok_result_q_expr.

pm_q_prop_ok_result_q_expr:

$$\{1\} \quad \forall (\text{data: Data, pm: Plain_Memory}[\text{State}], \text{s: State, q: [State} \rightarrow \text{ExprResult}[\text{State, Data_q}]]):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{pm_q_prop}(\text{pm})(\text{q}(\text{s})) \supset$$

$$\text{pm_q_prop}(\text{pm})((\text{q} \ \#\# \ \text{ok_result}[\text{State, Data}](\text{data}))(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of pm_q_prop_ok_result_q_expr.

Q.E.D.

C.178.6 Plain_Mem_Rewrites4.pm_q_prop_read_ok_result_single

Terse proof for pm_q_prop_read_ok_result_single.

pm_q_prop_read_ok_result_single:

$$\{1\} \quad \forall (\text{addr: Address, data_q: Data_q, dt: (interpreted_data_type? [Data]),} \\ \text{pm: Plain_Memory [State], s: State):} \\ \text{plain_memory? (pm) } \wedge \\ \text{pm' states (s) } \wedge \\ \text{in_blessed_memory? (dt, addr, (pm'ro_addr } \cup \text{ pm'rw_addr)) } \wedge \\ \text{valid_in_mem (pm, dt) (addr) (s)} \\ \supset \text{pm_q_prop_read (pm, dt, addr) (ok_result [State, Data_q] (data_q) (s))}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pm_q_prop_read,
 Using lemma pm_q_prop_ok_result_single [State, Data_q],
 Expanding the definition of pm_q_prop,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Rewriting using plain_memory_read_data_ok, matching in *,
 Rewriting using ok_result_state, matching in *,
 This completes the proof of pm_q_prop_read_ok_result_single.
 Q.E.D.

C.178.7

Plain_Mem_Rewrites4.plain_memory_read_write_q_data_expr_TCC1

Terse proof for plain_memory_read_write_q_data_expr_TCC1.

plain_memory_read_write_q_data_expr_TCC1:

$$\{1\} \quad \forall (\text{addr: Address, data: Data, dt: (interpreted_data_type? [Data]), pm: Plain_Memory [State],} \\ \text{s: State, q: [State } \rightarrow \text{ ExprResult [State, Data_q])}): \\ \text{plain_memory? (pm) } \wedge \text{in_blessed_memory? (dt, addr, pm'rw_addr) } \wedge \text{pm_q_prop (pm) (q (s))} \\ \supset \\ \text{OK? [State, Data]} \\ \quad ((\#\# [\text{State, Unit, Data}] \\ \quad \quad (\#\# [\text{State, Data_q, Unit}] \\ \quad \quad \quad (q, \text{write_data [State, Data] (pm, dt) (addr, data)}, \\ \quad \quad \quad \text{read_data [State, Data] (pm, dt) (addr)}))) \\ \quad (s))$$

Repeatedly Skolemizing and flattening,
 Using lemma pm_q_prop_read_write_q_expr,
 Expanding the definition of pm_q_prop_read,
 Installing automatic rewrites from: ## lift
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of plain_memory_read_write_q_data_expr_TCC1.
 Q.E.D.

C.178.8

Plain_Mem_Rewrites4.plain_memory_read_write_q_data_expr

Terse proof for plain_memory_read_write_q_data_expr.

plain_memory_read_write_q_data_expr:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{data1}: \text{Data}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}, \text{q}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data_q}]]):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{in_blessed_memory?}(\text{dt}, \text{addr}, \text{pm}'\text{rw_addr}) \wedge \text{pm_q_prop}(\text{pm})(\text{q}(\text{s}))$$

$$\supset$$

$$\text{data}((\text{q} \text{ ## } \text{write_data}(\text{pm}, \text{dt})(\text{addr}, \text{data1}) \text{ ## } \text{read_data}(\text{pm}, \text{dt})(\text{addr}))(\text{s})) = \text{data1}$$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: ((##!!))
 Expanding the definition of pm_q_prop,
 Using lemma plain_memory_read_write_res[State, Data],
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of plain_memory_read_write_q_data_expr.
 Q.E.D.

C.178.9 Plain_Mem_Rewrites4.pm_q_prop_read_write_other_single

Terse proof for pm_q_prop_read_write_other_single.

pm_q_prop_read_write_other_single:

$$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data}: \text{Data}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data}]), \text{dt2}: (\text{interpreted_data_type?}[\text{Data_q}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}):$$

$$\text{plain_memory?}(\text{pm}) \wedge$$

$$\text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge$$

$$\text{in_blessed_memory?}(\text{dt1}, \text{addr1}, \text{pm}'\text{rw_addr}) \wedge$$

$$\text{in_blessed_memory?}(\text{dt2}, \text{addr2}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge$$

$$\text{valid_in_mem}(\text{pm}, \text{dt2})(\text{addr2})(\text{s}) \wedge \text{pm}'\text{states}(\text{s})$$

$$\supset \text{pm_q_prop_read}(\text{pm}, \text{dt2}, \text{addr2})(\text{write_data}(\text{pm}, \text{dt1})(\text{addr1}, \text{data})(\text{s}))$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pm_q_prop_read,
 Using lemma plain_memory_write_data_ok[State, Data],
 Using lemma plain_memory_read_write_other_ok[State, Data, Data_q],
 Installing automatic rewrites from: ## lift
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma plain_memory_transformer_invariant_write_data[State, Data],
 Using lemma expr_transformer_invariant_next_ok,
 Expanding the definition of singleton,
 Expanding the definition of has_next_state,
 which is trivially true.
 This completes the proof of pm_q_prop_read_write_other_single.
 Q.E.D.

C.178.10 Plain_Mem_Rewrites4.pm_q_prop_read_read_single

Terse proof for pm_q_prop_read_read_single.

pm_q_prop_read_read_single:

$$\{1\} \quad \forall (\text{addr1, addr2: Address, dt1: (interpreted_data_type?[Data]),} \\ \text{dt2: (interpreted_data_type?[Data_q]), pm: Plain_Memory[State], s: State):} \\ \text{plain_memory?(pm) } \wedge \\ \text{in_blessed_memory?(dt1, addr1, (pm'ro_addr } \cup \text{ pm'rw_addr)) } \wedge \\ \text{in_blessed_memory?(dt2, addr2, (pm'ro_addr } \cup \text{ pm'rw_addr)) } \wedge \\ \text{valid_in_mem(pm, dt1)(addr1)(s) } \wedge \\ \text{valid_in_mem(pm, dt2)(addr2)(s) } \wedge \text{pm'states}(s) \\ \supset \text{pm_q_prop_read(pm, dt2, addr2)(read_data(pm, dt1)(addr1)(s))}$$

Repeatedly Skolemizing and flattening,
 Expanding the definition of pm_q_prop_read,
 Using lemma pm_q_prop_single_read[State, Data],
 Expanding the definition of pm_q_prop,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma plain_memory_read_read_ok[State, Data, Data_q],
 Installing automatic rewrites from: ##
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pm_q_prop_read_read_single.
 Q.E.D.

C.179 Proofs for Plain_Mem_Rewrites5 (plain_memory_rewrites.pvs)

C.179.1 Plain_Mem_Rewrites5.plain_memory_write_ok_q_stmt

Terse proof for plain_memory_write_ok_q_stmt.

plain_memory_write_ok_q_stmt:

$$\{1\} \quad \forall (\text{addr: Address, data: Data, dt: (interpreted_data_type?[Data]), pm: Plain_Memory[State],} \\ \text{s: State, q: [State } \rightarrow \text{ StmtResult[State]])}: \\ \text{plain_memory?(pm) } \wedge \text{in_blessed_memory?(dt, addr, pm'rw_addr) } \wedge \text{pm_q_prop(pm)(q)(s)} \\ \supset \text{OK?((q ## write_data(pm, dt)(addr, data))(s))}$$

Installing automatic rewrites from: ##
 Repeatedly Skolemizing and flattening,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Expanding the definition of pm_q_prop,
 Expanding the definition of lift,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Rewriting using plain_memory_write_data_ok, matching in *,
 This completes the proof of plain_memory_write_ok_q_stmt.
 Q.E.D.

C.179.2 Plain_Mem_Rewrites5.pm_q_prop_read_ok_stmt

Terse proof for pm_q_prop_read_ok_stmt.

pm_q_prop_read_ok_stmt:

$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \\ q: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{plain_memory?}(\text{pm}) \wedge \text{pm_q_prop_read}(\text{pm}, \text{dt}, \text{addr})(q(s)) \supset \\ \text{OK?}((q \ \#\# \ \text{read_data}(\text{pm}, \text{dt})(\text{addr}))(s))$

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Expanding the definition of lift,
 Expanding the definition of pm_q_prop_read,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pm_q_prop_read_ok_stmt.
 Q.E.D.

C.179.3 Plain_Mem_Rewrites5.pm_q_prop_read_pm_q_prop_stmt

Terse proof for pm_q_prop_read_pm_q_prop_stmt.

pm_q_prop_read_pm_q_prop_stmt:

$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{dt}: (\text{interpreted_data_type?}[\text{Data}]), \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \\ q: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{in_blessed_memory?}(\text{dt}, \text{addr}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{pm_q_prop_read}(\text{pm}, \text{dt}, \text{addr})(q(s)) \\ \supset \text{pm_q_prop}(\text{pm})((q \ \#\# \ \text{read_data}(\text{pm}, \text{dt})(\text{addr}))(s))$

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Expanding the definition of pm_q_prop,
 Expanding the definition of pm_q_prop_read,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 we get 2 subgoals:

pm_q_prop_read_pm_q_prop_stmt.1:

$\{-1\} \quad \text{interpreted_data_type?}[\text{Data}](\text{dt}')$
$\{-2\} \quad \text{plain_memory?}(\text{pm}')$
$\{-3\} \quad \text{in_blessed_memory?}(\text{dt}', \text{addr}', (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr}))$
$\{-4\} \quad \text{OK?}(q'(s'))$
$\{-5\} \quad \text{OK?}(\text{read_data}(\text{pm}', \text{dt}')(\text{addr}')(\text{state}(q'(s'))))$
$\{-6\} \quad \text{pm}'\text{states}(\text{state}(q'(s')))$
$\{1\} \quad \text{pm}'\text{states}(\text{state}(\text{lift}(\text{read_data}(\text{pm}', \text{dt}')(\text{addr}')))(q'(s')))$

Using lemma plain_memory_transformer_invariant_read_data[State, Data],
 Using lemma expr_transformer_invariant_next_ok[State, Data],
 Expanding the definition of has_next_state,
 Expanding the definition of singleton,
 Expanding the definition of lift,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of pm_q_prop_read_pm_q_prop_stmt.1.

pm_q_prop_read_pm_q_prop_stmt.2:

{-1}	interpreted_data_type?[Data](dt')
{-2}	plain_memory?(pm')
{-3}	in_blessed_memory?(dt', addr', (pm'ro_addr ∪ pm'rw_addr))
{-4}	OK?(q'(s'))
{-5}	OK?(read_data(pm', dt')(addr')(state(q'(s'))))
{-6}	pm' states(state(q'(s')))
{1}	OK?(lift(read_data(pm', dt')(addr'))(q'(s')))

Expanding the definition of lift,
which is trivially true.

This completes the proof of pm_q_prop_read_pm_q_prop_stmt.2.

Q.E.D.

C.179.4 Plain_Mem_Rewrites5.pm_q_prop_read_write_q_stmt

Terse proof for pm_q_prop_read_write_q_stmt.

pm_q_prop_read_write_q_stmt:

{1}	\forall (addr: Address, data: Data, dt: (interpreted_data_type?[Data]), pm: Plain_Memory [State], s: State, q: [State → StmtResult [State]]): plain_memory?(pm) ∧ in_blessed_memory?(dt, addr, pm'rw_addr) ∧ pm_q_prop(pm)(q(s)) ⊃ pm_q_prop_read(pm, dt, addr)((q ## write_data(pm, dt)(addr, data))(s))
-----	--

Installing automatic rewrites from: ##

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of lift,

Expanding the definition of pm_q_prop,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of pm_q_prop_read,

Using lemma plain_memory_write_data_ok [State, Data],

Using lemma plain_memory_transformer_invariant_write_data [State, Data],

Using lemma expr_transformer_invariant_next_ok,

Expanding the definition of singleton,

Expanding the definition of has_next_state,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Using lemma plain_memory_read_write_ok [State, Data],

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of pm_q_prop_read_write_q_stmt.

Q.E.D.

C.179.5 Plain_Mem_Rewrites5.pm_q_prop_ok_result_q_stmt

Terse proof for pm_q_prop_ok_result_q_stmt.

pm_q_prop_ok_result_q_stmt:

{1}	\forall (data: Data, pm: Plain_Memory [State], s: State, q: [State → StmtResult [State]]): plain_memory?(pm) ∧ pm_q_prop(pm)(q(s)) ⊃ pm_q_prop(pm)((q ## ok_result [State, Data] (data))(s))
-----	--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `pm_q_prop_ok_result_q_stmt`.
 Q.E.D.

C.179.6

Plain_Mem_Rewrites5.plain_memory_read_write_q_data_stmt_TCC1

Terse proof for `plain_memory_read_write_q_data_stmt_TCC1`.
`plain_memory_read_write_q_data_stmt_TCC1`:

$\{1\} \quad \forall (\text{addr: Address, data: Data, dt: (interpreted_data_type?}[\text{Data}]), \text{pm: Plain_Memory}[\text{State}])$ $s: \text{State}, q: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]:$ $\text{plain_memory?}(\text{pm}) \wedge \text{in_blessed_memory?}(\text{dt}, \text{addr}, \text{pm}'\text{rw_addr}) \wedge \text{pm_q_prop}(\text{pm})(q(s))$ \supset $\text{OK?}[\text{State}, \text{Data}]$ $((\#\#[\text{State}, \text{Unit}, \text{Data}]$ $(\#\#[\text{State}, \text{Unit}](q, \text{write_data}[\text{State}, \text{Data}](\text{pm}, \text{dt})(\text{addr}, \text{data})),$ $\text{read_data}[\text{State}, \text{Data}](\text{pm}, \text{dt})(\text{addr})))$ $(s))$

Repeatedly Skolemizing and flattening,
 Using lemma `pm_q_prop_read_write_q_stmt`,
 Expanding the definition of `pm_q_prop_read`,
 Installing automatic rewrites from: `## lift`
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

C.182 Proofs for Plain_Mem_Rewrites8 (plain_memory_rewrites.pvs)

C.182.1

Plain_Mem_Rewrites8.plain_memory_read_write_other_q_data_expr_TCC1

Terse proof for plain_memory_read_write_other_q_data_expr_TCC1.

plain_memory_read_write_other_q_data_expr_TCC1:

$$\begin{array}{l} \{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data2}: \text{Data2}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \quad \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}, \\ \quad \text{q}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data_q}]]): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{in_blessed_memory?}(\text{dt1}, \text{addr1}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{in_blessed_memory?}(\text{dt2}, \text{addr2}, \text{pm}'\text{rw_addr}) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{pm_q_prop_read}(\text{pm}, \text{dt1}, \text{addr1})(\text{q}(\text{s})) \\ \supset \\ \text{OK?}[\text{State}, \text{Data1}] \\ \quad ((\#\#[\text{State}, \text{Unit}, \text{Data1}] \\ \quad \quad (\#\#[\text{State}, \text{Data_q}, \text{Unit}] \\ \quad \quad \quad (\text{q}, \text{write_data}[\text{State}, \text{Data2}](\text{pm}, \text{dt2})(\text{addr2}, \text{data2})), \\ \quad \quad \quad \text{read_data}[\text{State}, \text{Data1}](\text{pm}, \text{dt1})(\text{addr1}))) \\ \quad \quad (s)) \end{array}$$

Repeatedly Skolemizing and flattening,

Using lemma pm_q_prop_read_write_other_q_expr[State, Data1, Data2, Data_q],

Expanding the definition of pm_q_prop_read,

Installing automatic rewrites from: ## lift

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of plain_memory_read_write_other_q_data_expr_TCC1.

Q.E.D.

C.182.2

Plain_Mem_Rewrites8.plain_memory_read_write_other_q_data_expr_TCC2

Terse proof for plain_memory_read_write_other_q_data_expr_TCC2.

plain_memory_read_write_other_q_data_expr_TCC2:

$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}, \\ \text{q}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data_q}]]): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{in_blessed_memory?}(\text{dt1}, \text{addr1}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{in_blessed_memory?}(\text{dt2}, \text{addr2}, \text{pm}'\text{rw_addr}) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{pm_q_prop_read}(\text{pm}, \text{dt1}, \text{addr1})(\text{q}(\text{s})) \\ \supset \\ \text{OK?}[\text{State}, \text{Data1}] \\ ((\#\#[\text{State}, \text{Data_q}, \text{Data1}](\text{q}, \text{read_data}[\text{State}, \text{Data1}](\text{pm}, \text{dt1})(\text{addr1}))) (\text{s}))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_memory_read_write_other_q_data_expr_TCC2.

Q.E.D.

C.182.3

Plain_Mem_Rewrites8.plain_memory_read_write_other_q_data_expr

Terse proof for plain_memory_read_write_other_q_data_expr.

plain_memory_read_write_other_q_data_expr:

$\{1\} \quad \forall (\text{addr1}, \text{addr2}: \text{Address}, \text{data2}: \text{Data2}, \text{dt1}: (\text{interpreted_data_type?}[\text{Data1}]), \\ \text{dt2}: (\text{interpreted_data_type?}[\text{Data2}]), \text{pm}: \text{Plain_Memory}[\text{State}], \text{s}: \text{State}, \\ \text{q}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data_q}]]): \\ \text{plain_memory?}(\text{pm}) \wedge \\ \text{in_blessed_memory?}(\text{dt1}, \text{addr1}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \wedge \\ \text{in_blessed_memory?}(\text{dt2}, \text{addr2}, \text{pm}'\text{rw_addr}) \wedge \\ \text{blocks_disjoint?}(\text{addr1}, \text{size}(\text{uidt}(\text{dt1})), \text{addr2}, \text{size}(\text{uidt}(\text{dt2}))) \wedge \\ \text{pm_q_prop_read}(\text{pm}, \text{dt1}, \text{addr1})(\text{q}(\text{s})) \\ \supset \\ \text{data}((\text{q} \#\# \text{write_data}(\text{pm}, \text{dt2})(\text{addr2}, \text{data2}) \#\# \text{read_data}(\text{pm}, \text{dt1})(\text{addr1}))) (\text{s}) \\ = \text{data}((\text{q} \#\# \text{read_data}(\text{pm}, \text{dt1})(\text{addr1}))) (\text{s}))$

Repeatedly Skolemizing and flattening,

Expanding the definition of pm_q_prop_read,

Using lemma plain_memory_read_write_other_single_data[State, Data1, Data2],

Expanding the definition of ##,

Expanding the definition of ##,

Using lemma pm_q_prop_single_read[State, Data1],

Installing automatic rewrites from: valid_in_mem read_data read_data_valid_in_mem

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of plain_memory_read_write_other_q_data_expr.

Q.E.D.

C.183 Proofs for Plain_Memory (plain_memory.pvs)

C.183.1

Plain_Memory.plain_memory_invariant_read_transformers_ro_addr

Terse proof for plain_memory_invariant_read_transformers_ro_addr.

plain_memory_invariant_read_transformers_ro_addr:

$\{1\} \quad \forall (pm: Plain_Memory):$ $\quad plain_memory?(pm) \supset$ $\quad transformer_invariant?(pm'states, memory_read_transformers(pm'mem, pm'ro_addr))$

Repeatedly Skolemizing and flattening,
Expanding the definition of plain_memory?,
Applying disjunctive simplification to flatten sequent,
Keeping (-1 1) and hiding *,
Using lemma unchanged_memory_invariant_invariant,
Simplifying, rewriting, and recording with decision procedures,
Hiding formulas: -2,
Using lemma transformer_invariant_mono_transformers,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
Keeping (1) and hiding *,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of plain_memory_invariant_read_transformers_ro_addr.
Q.E.D.

C.183.2

Plain_Memory.plain_memory_invariant_read_transformers_rw_addr

Terse proof for plain_memory_invariant_read_transformers_rw_addr.

plain_memory_invariant_read_transformers_rw_addr:

$\{1\} \quad \forall (pm: Plain_Memory):$ $\quad plain_memory?(pm) \supset$ $\quad transformer_invariant?(pm'states, memory_read_transformers(pm'mem, pm'rw_addr))$

Skolemizing and flattening,
Expanding the definition of plain_memory?,
Expanding the definition of changed_memory_invariant?,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of plain_memory_invariant_read_transformers_rw_addr.
Q.E.D.

C.183.3

Plain_Memory.plain_memory_invariant_read_transformers_ro_rw_addr

Terse proof for plain_memory_invariant_read_transformers_ro_rw_addr.

plain_memory_invariant_read_transformers_ro_rw_addr:

{1}	$\forall (pm: Plain_Memory):$ $plain_memory?(pm) \supset$ $transformer_invariant?(pm' states,$ <div style="text-align: right;">$memory_read_transformers(pm' mem, (pm' ro_addr \cup pm' rw_addr)))$</div>
-----	--

Repeatedly Skolemizing and flattening,
 Using lemma plain_memory_invariant_read_transformers_ro_addr,
 Using lemma plain_memory_invariant_read_transformers_rw_addr,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma transformer_invariant_union_transformers,
 Simplifying, rewriting, and recording with decision procedures,
 Rewriting using memory_read_transformers_union, matching in *,
 This completes the proof of plain_memory_invariant_read_transformers_ro_rw_addr.
 Q.E.D.

C.183.4

Plain_Memory.plain_memory_invariant_write_transformers_rw_addr

Terse proof for plain_memory_invariant_write_transformers_rw_addr.

plain_memory_invariant_write_transformers_rw_addr:

{1}	$\forall (pm: Plain_Memory):$ $plain_memory?(pm) \supset$ $transformer_invariant?(pm' states, memory_write_transformers(pm' mem, pm' rw_addr))$
-----	---

Skolemizing and flattening,
 Expanding the definition of plain_memory?,
 Expanding the definition of changed_memory_invariant?,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of plain_memory_invariant_write_transformers_rw_addr.
 Q.E.D.

C.183.5 Plain_Memory.plain_memory_invariant

Terse proof for plain_memory_invariant.

plain_memory_invariant:

{1}	$\forall (pm: Plain_Memory):$ $plain_memory?(pm) \supset$ $transformer_invariant?(pm' states,$ <div style="text-align: right;">$(pm' other_actions \cup ((memory_read_transformers(pm' mem, (pm' ro_addr \cup pm'$</div>
-----	---

Expanding the definition of plain_memory?,
 Repeatedly Skolemizing and flattening,
 Expanding the definition of unchanged_memory_invariant?,
 Applying disjunctive simplification to flatten sequent,
 Keeping (-1 -3 1) and hiding *,
 Using lemma transformer_invariant_union_transformers,

plain_memory_unchanged_invariant:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}):$$

$$\text{plain_memory?}(pm) \supset$$

$$\text{unchanged_memory_invariant?}(pm' \text{mem}, pm' \text{states},$$

$$\quad ((pm' \text{other_actions} \cup \text{memory_read_transformers}(pm' \text{mem}, (pm' \text{ro_addr}$$

$$\quad (pm' \text{ro_addr} \cup pm' \text{rw_addr}))$$

Expanding the definition of plain_memory?,
 Repeatedly Skolemizing and flattening,
 This completes the proof of plain_memory_unchanged_invariant.
 Q.E.D.

C.183.7

Plain_Memory.plain_memory_unchanged_memory_invariant_write

Terse proof for plain_memory_unchanged_memory_invariant_write.

plain_memory_unchanged_memory_invariant_write:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}):$$

$$\text{plain_memory?}(pm) \supset$$

$$\text{unchanged_memory_invariant?}(pm' \text{mem}, pm' \text{states}, \text{mem-}$$

$$\text{ory_write_transformers}(pm' \text{mem}, pm' \text{rw_addr}),$$

$$\quad pm' \text{ro_addr})$$

Expanding the definition of plain_memory?,
 Repeatedly Skolemizing and flattening,
 This completes the proof of plain_memory_unchanged_memory_invariant_write.
 Q.E.D.

C.183.8

Plain_Memory.plain_memory_unchanged_memory_write_invariant

Terse proof for plain_memory_unchanged_memory_write_invariant.

plain_memory_unchanged_memory_write_invariant:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}):$$

$$\text{plain_memory?}(pm) \supset \text{unchanged_memory_write_invariant?}(pm' \text{mem}, pm' \text{states}, pm' \text{rw_addr})$$

Expanding the definition of plain_memory?,
 Repeatedly Skolemizing and flattening,
 This completes the proof of plain_memory_unchanged_memory_write_invariant.
 Q.E.D.

C.183.9 Plain_Memory.plain_memory_changed_memory_invariant

Terse proof for plain_memory_changed_memory_invariant.

plain_memory_changed_memory_invariant:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}):$$

$$\text{plain_memory?}(pm) \supset \text{changed_memory_invariant?}(pm' \text{mem}, pm' \text{states}, pm' \text{rw_addr})$$

Expanding the definition of `plain_memory?`,
 Repeatedly Skolemizing and flattening,
 This completes the proof of `plain_memory_changed_memory_invariant`.
 Q.E.D.

C.183.10 Plain_Memory.plain_memory_invariant_read_block

Terse proof for `plain_memory_invariant_read_block`.

`plain_memory_invariant_read_block`:

$$\{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory, size: nat}):$$

$$\text{plain_memory?}(pm) \wedge (\text{address_block}(\text{addr, size}) \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \supset$$

$$\text{transformer_invariant?}(\text{pm}'\text{states,}$$

$$\text{memory_read_transformers}(\text{pm}'\text{mem, ad-}$$

$$\text{dress_block}(\text{addr, size}))$$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: `memory_read_transformers_mono`
 Using lemma `plain_memory_invariant_read_transformers_ro_rw_addr`,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma `transformer_invariant_mono_transformers`,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `plain_memory_invariant_read_block`.
 Q.E.D.

C.183.11 Plain_Memory.plain_memory_invariant_write_block

Terse proof for `plain_memory_invariant_write_block`.

`plain_memory_invariant_write_block`:

$$\{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory, size: nat}):$$

$$\text{plain_memory?}(pm) \wedge (\text{address_block}(\text{addr, size}) \subseteq \text{pm}'\text{rw_addr}) \supset$$

$$\text{transformer_invariant?}(\text{pm}'\text{states,}$$

$$\text{memory_write_transformers}(\text{pm}'\text{mem, ad-}$$

$$\text{dress_block}(\text{addr, size}))$$

Repeatedly Skolemizing and flattening,
 Using lemma `plain_memory_invariant_write_transformers_rw_addr`,
 Simplifying, rewriting, and recording with decision procedures,
 Installing automatic rewrites from: `memory_write_transformers_mono`
 Rewriting using `transformer_invariant_mono_transformers`, matching in * where `transformers_1`
 gets `memory_write_transformers(pm!1'mem, address_block(addr!1, size!1))`, `transformers_2` gets `mem-`
`ory_write_transformers(pm!1'mem, pm!1'rw_addr)`,
 This completes the proof of `plain_memory_invariant_write_block`.
 Q.E.D.

C.183.12

Plain_Memory.plain_memory_transformer_invariant_read_side_effects

Terse proof for `plain_memory_transformer_invariant_read_side_effects`.

plain_memory_transformer_invariant_read_side_effects:

$\{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory, size: nat}):$ $\text{plain_memory?}(pm) \wedge (\text{address_block}(\text{addr}, \text{size}) \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \supset$ $\text{transformer_invariant?}(\text{pm}'\text{states},$ $\text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem},$ $\text{address_block}(\text{addr}, \text{size}))$

Expanding the definition of plain_memory?,

Repeatedly Skolemizing and flattening,

Using lemma transformer_invariant_mono_transformers,

Using lemma unchanged_memory_invariant_invariant,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-9 1) and hiding *,

Rewriting using subset_transitive, matching in * where a gets memory_read_side_effect_super_transformers(pm!1'mem, address_block(addr!1, size!1)), b gets memory_read_side_effect_super_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr)), c gets union(union(pm!1'other_actions, memory_read_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr))), union(memory_read_side_effect_super_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr)), memory_write_side_effect_super_transformers(pm!1'mem, pm!1'rw_addr))),

we get 2 subgoals:

plain_memory_transformer_invariant_read_side_effects.1:

$\{-1\} \quad \text{side_effect_content_unchanged}(\text{pm}'\text{rw_addr}, \text{pm}'\text{states}, \text{memory_write_side_effect}(\text{pm}'\text{mem}))$
$\{1\} \quad (\text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')) \subseteq \text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')) \subseteq ((\text{pm}'\text{other_actions} \cup \text{memory_write_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}'))))$
$\{2\} \quad (\text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')) \subseteq ((\text{pm}'\text{other_actions} \cup \text{memory_write_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}'))))$

Hiding formulas: 2,

Expanding the definition of subset?,

Expanding the definition of member,

Repeatedly Skolemizing and flattening,

Expanding the definition of memory_read_side_effect_super_transformers,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-2 -4 1) and hiding *,

Rewriting using subset_transitive, matching in * where a gets address_block(a!1, length(bl!1)), b gets address_block(addr!1, size!1), c gets union(pm!1'ro_addr, pm!1'rw_addr),

This completes the proof of plain_memory_transformer_invariant_read_side_effects.1.

plain_memory_transformer_invariant_read_side_effects.2:

$\{-1\} \quad \text{side_effect_content_unchanged}(\text{pm}'\text{rw_addr}, \text{pm}'\text{states}, \text{memory_write_side_effect}(\text{pm}'\text{mem}))$
$\{1\} \quad (\text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \subseteq ((\text{pm}'\text{other_actions} \cup \text{memory_write_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}'))))$
$\{2\} \quad (\text{memory_read_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')) \subseteq ((\text{pm}'\text{other_actions} \cup \text{memory_write_side_effect_super_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}'))))$

Hiding formulas: (-1 2),

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_memory_transformer_invariant_read_side_effects.2.

Q.E.D.

C.183.13**Plain_Memory.plain_memory_transformer_invariant_write_side_effects**

Terse proof for `plain_memory_transformer_invariant_write_side_effects`.

`plain_memory_transformer_invariant_write_side_effects:`

$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}, \text{size}: \text{nat}):$ $\text{plain_memory?}(\text{pm}) \wedge (\text{address_block}(\text{addr}, \text{size}) \subseteq \text{pm}'\text{rw_addr}) \supset$ $\text{transformer_invariant?}(\text{pm}'\text{states},$ $\text{memory_write_side_effect_super_transformers}(\text{pm}'\text{mem},$ $\text{address_block}(\text{addr}, \text{size}))$	$)$

 Simplifying, rewriting, and recording with decision procedures,
 Keeping (1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `plain_memory_transformers_ok_read_ro_rw`.
 Q.E.D.

C.183.17 Plain_Memory.plain_memory_transformers_ok_read_block

Terse proof for `plain_memory_transformers_ok_read_block`.

`plain_memory_transformers_ok_read_block`:

$\{1\} \quad \forall (\text{addr} : \text{Address}, \text{pm} : \text{Plain_Memory}, \text{size} : \text{nat}) : \\ \text{plain_memory?}(\text{pm}) \wedge (\text{address_block}(\text{addr}, \text{size}) \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \supset \\ \text{transformers_ok?}(\text{pm}'\text{states}, \text{memory_read_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}, \text{size})))$

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: `memory_read_transformers_mono`
 Rewriting using `transformers_ok_mono_transformers`, matching in * where `transformers_1` gets
`memory_read_transformers(pm!1'mem, address_block(addr!1, size!1))`, `transformers_2` gets `mem-`
`ory_read_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr))`,
 we get 2 subgoals:

`plain_memory_transformers_ok_read_block.1`:

$\{-1\} \quad \text{size}' \geq 0$
$\{-2\} \quad \text{plain_memory?}(\text{pm}')$
$\{-3\} \quad (\text{address_block}(\text{addr}', \text{size}') \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr}))$
$\{1\} \quad (\text{memory_read_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')) \subseteq \text{memory_read_transformers}(\text{pm}'\text{mem}, \text{union}(\text{pm}'\text{ro_addr}, \text{pm}'\text{rw_addr})))$
$\{2\} \quad \text{transformers_ok?}(\text{pm}'\text{states}, \text{memory_read_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')))$

Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `plain_memory_transformers_ok_read_block.1`.

`plain_memory_transformers_ok_read_block.2`:

$\{-1\} \quad \text{size}' \geq 0$
$\{-2\} \quad \text{plain_memory?}(\text{pm}')$
$\{-3\} \quad (\text{address_block}(\text{addr}', \text{size}') \subseteq (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr}))$
$\{1\} \quad \text{transformers_ok?}(\text{pm}'\text{states}, \text{memory_read_transformers}(\text{pm}'\text{mem}, (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})))$
$\{2\} \quad \text{transformers_ok?}(\text{pm}'\text{states}, \text{memory_read_transformers}(\text{pm}'\text{mem}, \text{address_block}(\text{addr}', \text{size}')))$

Expanding the definition of `plain_memory?`,
 Applying disjunctive simplification to flatten sequent,
 Keeping (-6 1) and hiding *,
 Using lemma `transformers_ok_mono_transformers`,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Keeping (1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_memory_transformers_ok_read_block.2.
Q.E.D.

C.183.18 Plain_Memory.plain_memory_transformers_ok_write_rw

Terse proof for plain_memory_transformers_ok_write_rw.

plain_memory_transformers_ok_write_rw:

{1}	$\forall (pm: \text{Plain_Memory}):$ $\text{plain_memory?}(pm) \supset$ $\text{transformers_ok?}(pm' \text{states}, \text{memory_write_transformers}(pm' \text{mem}, pm' \text{rw_addr}))$
-----	--

Installing automatic rewrites from: subset_equal union_subset1 union_subset3 union_left union_right subset_singleton subset_bigger_union_right subset_bigger_union_left union_left union_right

Skolemizing and flattening,

Expanding the definition of plain_memory?,

Applying disjunctive simplification to flatten sequent,

Rewriting using transformers_ok_mono_transformers, matching in * where transformers_1 gets memory_write_transformers(pm!1'mem, pm!1'rw_addr), transformers_2 gets union(union(memory_read_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr)), memory_write_transformers(pm!1'mem, pm!1'rw_addr)), union(memory_read_side_effect_super_transformers(pm!1'mem, union(pm!1'ro_addr, pm!1'rw_addr)), memory_write_side_effect_super_transformers(pm!1'mem, pm!1'rw_addr))),

This completes the proof of plain_memory_transformers_ok_write_rw.

Q.E.D.

C.183.19 Plain_Memory.plain_memory_transformers_ok_write_block

Terse proof for plain_memory_transformers_ok_write_block.

plain_memory_transformers_ok_write_block:

{1}	$\forall (addr: \text{Address}, pm: \text{Plain_Memory}, size: \text{nat}):$ $\text{plain_memory?}(pm) \wedge (\text{address_block}(addr, size) \subseteq pm' \text{rw_addr}) \supset$ $\text{transformers_ok?}(pm' \text{states}, \text{memory_write_transformers}(pm' \text{mem}, \text{address_block}(addr, size)))$
-----	---

Skolemizing and flattening,

Rewriting using transformers_ok_mono_transformers, matching in * where transformers_1 gets memory_write_transformers(pm!1'mem, address_block(addr!1, size!1)), transformers_2 gets memory_write_transformers(pm!1'mem, pm!1'rw_addr),

we get 2 subgoals:

plain_memory_transformers_ok_write_block.1:

{-1}	plain_memory?(pm')
{-2}	$(\text{address_block}(addr', size') \subseteq pm' \text{rw_addr})$
{1}	$(\text{memory_write_transformers}(pm' \text{mem}, \text{address_block}(addr', size')) \subseteq \text{memory_write_transformers}(pm' \text{mem},$
{2}	$\text{transformers_ok?}(pm' \text{states},$ $\text{memory_write_transformers}(pm' \text{mem}, \text{address_block}(addr', size')))$

Rewriting using memory_write_transformers_mono, matching in *,

This completes the proof of plain_memory_transformers_ok_write_block.1.

plain_memory_transformers_ok_write_block.2:

{-1}	plain_memory?(pm')
{-2}	(address_block(addr', size') \subseteq pm'rw_addr)
{1}	transformers_ok?(pm' states, memory_write_transformers(pm' mem, pm'rw_addr))
{2}	transformers_ok?(pm' states, memory_write_transformers(pm' mem, ad- dress_block(addr', size')))

Rewriting using plain_memory_transformers_ok_write_rw, matching in *,
This completes the proof of plain_memory_transformers_ok_write_block.2.
Q.E.D.

`plain_memory_side_effect_content_unchanged_write_block`:

$$\{1\} \quad \forall (addr: Address, pm: Plain_Memory, size: nat):$$

$$plain_memory?(pm) \wedge (address_block(addr, size) \subseteq pm'rw_addr) \supset$$

$$side_effect_content_unchanged(address_block(addr, size), pm'states,$$

$$memory_write_side_effect(pm'mem))$$

Expanding the definition of `plain_memory?`,
 Repeatedly Skolemizing and flattening,
 Keeping (-8 -9 1) and hiding `*`,
 Rewriting using `side_effect_content_unchanged_mono[State]`, matching in `*` where `addresses_1` gets `address_block(addr!1, size!1)`, `addresses_2` gets `pm!1'rw_addr`,
 This completes the proof of `plain_memory_side_effect_content_unchanged_write_block`.
 Q.E.D.

C.183.39 Plain_Memory.plain_memory_memory_read_ok

Terse proof for `plain_memory_memory_read_ok`.

`plain_memory_memory_read_ok`:

$$\{1\} \quad \forall (addr: Address, pm: Plain_Memory, s: State):$$

$$plain_memory?(pm) \wedge pm'states(s) \wedge union(pm'ro_addr, pm'rw_addr)(addr) \supset$$

$$OK?(memory_read(pm'mem)(addr)(s))$$

Repeatedly Skolemizing and flattening,
 Using lemma plain_memory_transformers_ok_read_ro_rw,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma expr_transformers_ok_ok,
 Installing automatic rewrites from: memory_read_transformers_memory_read
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of plain_memory_memory_read_ok.
 Q.E.D.

C.183.40 Plain_Memory.plain_memory_states_memory_read_TCC1

Terse proof for plain_memory_states_memory_read_TCC1.

plain_memory_states_memory_read_TCC1:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}, s: \text{State}):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{pm}'\text{states}(s) \wedge \text{union}(\text{pm}'\text{ro_addr}, \text{pm}'\text{rw_addr})(\text{addr}) \supset$$

$$\text{OK?}[\text{State}, \text{Byte}](\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s)) \vee$$

$$\text{Exception?}[\text{State}, \text{Byte}](\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s))$$

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_memory_read_ok, matching in *,
 This completes the proof of plain_memory_states_memory_read_TCC1.
 Q.E.D.

C.183.41 Plain_Memory.plain_memory_states_memory_read

Terse proof for plain_memory_states_memory_read.

plain_memory_states_memory_read:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}, s: \text{State}):$$

$$\text{plain_memory?}(\text{pm}) \wedge \text{pm}'\text{states}(s) \wedge \text{union}(\text{pm}'\text{ro_addr}, \text{pm}'\text{rw_addr})(\text{addr}) \supset$$

$$\text{pm}'\text{states}(\text{state}(\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s)))$$

Repeatedly Skolemizing and flattening,
 Using lemma plain_memory_invariant_read_transformers_ro_rw_addr,
 Simplifying, rewriting, and recording with decision procedures,
 Using lemma expr_transformer_invariant_next_ok[State, Byte],
 Installing automatic rewrites from: memory_read_transformers_memory_read plain_memory_memory_read_ok
 has_next_state!
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of plain_memory_states_memory_read.
 Q.E.D.

C.183.42

Plain_Memory.plain_memory_memory_read_memory_read_TCC1

Terse proof for plain_memory_memory_read_memory_read_TCC1.

plain_memory_memory_read_memory_read_TCC1:

```
{1}  ∃ (pm: Plain_Memory, s: State, addr1, addr2: Address):
      plain_memory?(pm) ∧
      pm'states(s) ∧
      union(pm'ro_addr, pm'rw_addr)(addr1) ∧ union(pm'ro_addr, pm'rw_addr)(addr2)
      ⊃
      OK?[State, Byte](memory_read(pm'mem)(addr2)(s)) ∨
      Exception?[State, Byte](memory_read(pm'mem)(addr2)(s))
```

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_memory_read_ok, matching in *,
 This completes the proof of plain_memory_memory_read_memory_read_TCC1.
 Q.E.D.

C.183.43

Plain_Memory.plain_memory_memory_read_memory_read_TCC2

Terse proof for plain_memory_memory_read_memory_read_TCC2.

plain_memory_memory_read_memory_read_TCC2:

```
{1}  ∃ (pm: Plain_Memory, s: State, addr1, addr2: Address):
      plain_memory?(pm) ∧
      pm'states(s) ∧
      union(pm'ro_addr, pm'rw_addr)(addr1) ∧ union(pm'ro_addr, pm'rw_addr)(addr2)
      ⊃
      OK?[State, Byte]
      (memory_read(pm'mem)
       (addr1)(state[State, Byte](memory_read(pm'mem)(addr2)(s))))
```

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_memory_read_ok, matching in *,
 Rewriting using plain_memory_states_memory_read, matching in *,
 This completes the proof of plain_memory_memory_read_memory_read_TCC2.
 Q.E.D.

C.183.44

Plain_Memory.plain_memory_memory_read_memory_read_TCC3

Terse proof for plain_memory_memory_read_memory_read_TCC3.

plain_memory_memory_read_memory_read_TCC3:

```
{1}  ∃ (pm: Plain_Memory, s: State, addr1, addr2: Address):
      plain_memory?(pm) ∧
      pm'states(s) ∧
      union(pm'ro_addr, pm'rw_addr)(addr1) ∧ union(pm'ro_addr, pm'rw_addr)(addr2)
      ⊃ OK?[State, Byte](memory_read(pm'mem)(addr1)(s))
```

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_memory_read_ok, matching in *,
 This completes the proof of plain_memory_memory_read_memory_read_TCC3.

Q.E.D.

C.183.45 Plain_Memory.plain_memory_memory_read_memory_read

Terse proof for plain_memory_memory_read_memory_read.

plain_memory_memory_read_memory_read:

$\{1\} \quad \forall (pm: \text{Plain_Memory}, s: \text{State}, addr1, addr2: \text{Address}):$ $\text{plain_memory?}(pm) \wedge$ $pm' \text{states}(s) \wedge$ $\text{union}(pm' \text{ro_addr}, pm' \text{rw_addr})(addr1) \wedge \text{union}(pm' \text{ro_addr}, pm' \text{rw_addr})(addr2)$ \supset $\text{data}(\text{memory_read}(pm' \text{mem})(addr1)(\text{state}(\text{memory_read}(pm' \text{mem})(addr2)(s)))) =$ $\text{data}(\text{memory_read}(pm' \text{mem})(addr1)(s))$
--

Repeatedly Skolemizing and flattening,

Expanding the definition of only_changes,

Expanding the definition of stays_unchanged,

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

Keeping (-4 -5 -6 2) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stays_unchanged_only_changes.2.

Q.E.D.

C.183.61 Plain_Memory.stays_unchanged_only_changes_disjoint

Terse proof for stays_unchanged_only_changes_disjoint.

stays_unchanged_only_changes_disjoint:

$\{1\} \quad \forall (pm: Plain_Memory, s_1, s_2: State, addresses_1, addresses_2: PRED[Address]):$ $plain_memory?(pm) \wedge$ $pm'states(s_1) \wedge$ $pm'states(s_2) \wedge$ $(addresses_2 \subseteq (pm'ro_addr \cup pm'rw_addr)) \wedge$ $disjoint?(addresses_1, addresses_2) \wedge only_changes(pm)(s_1, s_2, addresses_1)$ $\supset stays_unchanged(pm)(s_1, s_2, addresses_2)$

Repeatedly Skolemizing and flattening,
 Expanding the definition of only_changes,
 Using lemma stays_unchanged_mono,
 Simplifying, rewriting, and recording with decision procedures,
 Keeping (-4 -5 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of stays_unchanged_only_changes_disjoint.
 Q.E.D.

C.183.62 Plain_Memory.only_changes_symmetric

Terse proof for only_changes_symmetric.

only_changes_symmetric:

$\{1\} \quad \forall (pm: Plain_Memory, s_1, s_2: State, addresses: PRED[Address]):$ $plain_memory?(pm) \wedge pm'states(s_1) \wedge pm'states(s_2) \supset$ $only_changes(pm)(s_1, s_2, addresses) = only_changes(pm)(s_2, s_1, addresses)$
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of only_changes,
 Rewriting using stays_unchanged_symmetric, matching in *,
 This completes the proof of only_changes_symmetric.
 Q.E.D.

C.183.63 Plain_Memory.only_changes_mono

Terse proof for only_changes_mono.

only_changes_mono:

$\{1\} \quad \forall (pm: Plain_Memory, s_1, s_2: State, addresses_1, addresses_2: PRED[Address]):$ $plain_memory?(pm) \wedge$ $pm'states(s_1) \wedge$ $pm'states(s_2) \wedge$ $(addresses_1 \subseteq addresses_2) \wedge only_changes(pm)(s_1, s_2, addresses_1)$ $\supset only_changes(pm)(s_1, s_2, addresses_2)$

Repeatedly Skolemizing and flattening,
 Expanding the definition of only_changes,
 Using lemma stays_unchanged_mono,
 Simplifying, rewriting, and recording with decision procedures,
 Keeping (-4 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,

C Proof scripts

This completes the proof of `only_changes_mono`.

Q.E.D.

C.183.64 Plain_Memory.only_changes_unchanged_TCC1

Terse proof for `only_changes_unchanged_TCC1`.

`only_changes_unchanged_TCC1`:

$$\begin{array}{l} \{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory, } s_1, s_2: \text{State, addresses: PRED[Address]):} \\ \quad \text{plain_memory?}(pm) \wedge \\ \quad \text{pm}'\text{states}(s_1) \wedge \\ \quad \text{pm}'\text{states}(s_2) \wedge \\ \quad \text{only_changes}(pm)(s_1, s_2, \text{addresses}) \wedge \\ \quad (\text{pm}'\text{ro_addr}(\text{addr}) \vee \text{pm}'\text{rw_addr}(\text{addr}) \wedge \neg \text{addresses}(\text{addr})) \\ \quad \supset \text{OK?}[State, Byte](\text{memory_read}(pm'\text{mem})(\text{addr})(s_1)) \end{array}$$

Repeatedly Skolemizing and flattening,

Rewriting using `plain_memory_memory_read_ok`, matching in `*`,

Keeping `(-5 1)` and hiding `*`,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `only_changes_unchanged_TCC1`.

Q.E.D.

C.183.65 Plain_Memory.only_changes_unchanged_TCC2

Terse proof for `only_changes_unchanged_TCC2`.

`only_changes_unchanged_TCC2`:

$$\begin{array}{l} \{1\} \quad \forall (\text{addr: Address, pm: Plain_Memory, } s_1, s_2: \text{State, addresses: PRED[Address]):} \\ \quad \text{plain_memory?}(pm) \wedge \\ \quad \text{pm}'\text{states}(s_1) \wedge \\ \quad \text{pm}'\text{states}(s_2) \wedge \\ \quad \text{only_changes}(pm)(s_1, s_2, \text{addresses}) \wedge \\ \quad (\text{pm}'\text{ro_addr}(\text{addr}) \vee \text{pm}'\text{rw_addr}(\text{addr}) \wedge \neg \text{addresses}(\text{addr})) \\ \quad \supset \text{OK?}[State, Byte](\text{memory_read}(pm'\text{mem})(\text{addr})(s_2)) \end{array}$$

Repeatedly Skolemizing and flattening,

Rewriting using `plain_memory_memory_read_ok`, matching in `*`,

Keeping `(-5 1)` and hiding `*`,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `only_changes_unchanged_TCC2`.

Q.E.D.

C.183.66 Plain_Memory.only_changes_unchanged

Terse proof for `only_changes_unchanged`.

only_changes_unchanged:

$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{pm}: \text{Plain_Memory}, s_1, s_2: \text{State}, \text{addresses}: \text{PRED}[\text{Address}]):$ $\text{plain_memory?}(\text{pm}) \wedge$ $\text{pm}'\text{states}(s_1) \wedge$ $\text{pm}'\text{states}(s_2) \wedge$ $\text{only_changes}(\text{pm})(s_1, s_2, \text{addresses}) \wedge$ $(\text{pm}'\text{ro_addr}(\text{addr}) \vee \text{pm}'\text{rw_addr}(\text{addr}) \wedge \neg \text{addresses}(\text{addr}))$ $\supset \text{data}(\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s_1)) = \text{data}(\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s_2))$
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of only_changes,
 Using lemma stays_unchanged_unchanged,
 Simplifying, rewriting, and recording with decision procedures,
 Keeping (-5 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of only_changes_unchanged.
 Q.E.D.

C.183.67

Plain_Memory.plain_memory_stays_unchanged_memory_read_TCC1

Terse proof for plain_memory_stays_unchanged_memory_read_TCC1.

plain_memory_stays_unchanged_memory_read_TCC1:

$\{1\} \quad \forall (\text{pm}: \text{Plain_Memory}, s: \text{State}, \text{addr}: \text{Address}):$ $\text{plain_memory?}(\text{pm}) \wedge \text{pm}'\text{states}(s) \wedge \text{union}(\text{pm}'\text{ro_addr}, \text{pm}'\text{rw_addr})(\text{addr}) \supset$ $\text{pm}'\text{states}(\text{state}[\text{State}, \text{Byte}](\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s)))$
--

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_states_memory_read, matching in *,
 This completes the proof of plain_memory_stays_unchanged_memory_read_TCC1.
 Q.E.D.

C.183.68

Plain_Memory.plain_memory_stays_unchanged_memory_read

Terse proof for plain_memory_stays_unchanged_memory_read.

plain_memory_stays_unchanged_memory_read:

$\{1\} \quad \forall (\text{pm}: \text{Plain_Memory}, s: \text{State}, \text{addr}: \text{Address}):$ $\text{plain_memory?}(\text{pm}) \wedge \text{pm}'\text{states}(s) \wedge \text{union}(\text{pm}'\text{ro_addr}, \text{pm}'\text{rw_addr})(\text{addr}) \supset$ $\text{stays_unchanged}(\text{pm})$ $(s, \text{state}(\text{memory_read}(\text{pm}'\text{mem})(\text{addr})(s)),$ $(\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr}))$
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of stays_unchanged,
 Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_memory_read_memory_read, matching in *,
 This completes the proof of plain_memory_stays_unchanged_memory_read.

Q.E.D.

C.183.69

Plain_Memory.plain_memory_stays_unchanged_memory_write_TCC1

Terse proof for plain_memory_stays_unchanged_memory_write_TCC1.

plain_memory_stays_unchanged_memory_write_TCC1:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}, s: \text{State}, addr: \text{Address}, byte: \text{Byte}):$$
$$\text{plain_memory?}(pm) \wedge pm' \text{states}(s) \wedge pm' \text{rw_addr}(addr) \supset$$
$$pm' \text{states}(\text{state}[\text{State}, \text{Unit}](\text{memory_write}(pm' \text{mem})(addr, byte)(s)))$$

Repeatedly Skolemizing and flattening,

Rewriting using plain_memory_states_memory_write, matching in *,

This completes the proof of plain_memory_stays_unchanged_memory_write_TCC1.

Q.E.D.

C.183.70

Plain_Memory.plain_memory_stays_unchanged_memory_write

Terse proof for plain_memory_stays_unchanged_memory_write.

plain_memory_stays_unchanged_memory_write:

$$\{1\} \quad \forall (pm: \text{Plain_Memory}, s: \text{State}, addr: \text{Address}, byte: \text{Byte}):$$
$$\text{plain_memory?}(pm) \wedge pm' \text{states}(s) \wedge pm' \text{rw_addr}(addr) \supset$$
$$\text{stays_unchanged}(pm)$$
$$(s, \text{state}(\text{memory_write}(pm' \text{mem})(addr, byte)(s)),$$
$$((pm' \text{ro_addr} \cup pm' \text{rw_addr}) \setminus \{addr\}))$$

Repeatedly Skolemizing and flattening,

Expanding the definition of stays_unchanged,

Repeatedly Skolemizing and flattening,

Rewriting using plain_memory_memory_read_memory_write_other, matching in *,

Expanding the definition of remove,

which is trivially true.

This completes the proof of plain_memory_stays_unchanged_memory_write.

Q.E.D.

C.184 Proofs for PointerToMemberExpressions (expressions.pvs)

C.184.1 PointerToMemberExpressions.ptm_member_TCC1

Terse proof for ptm_member_TCC1.

ptm_member_TCC1:

$$\{1\} \quad \forall (typ: \text{Cpp_Subtype}(\text{cv}(\text{pointer_to_member?}))) : \text{pointer_to_member?}(\text{cv_base}(typ))$$

Repeatedly Skolemizing and flattening,

Rewriting using `cv_base_result`, matching in `*`,
 Keeping (1) and hiding `*`,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `ptm_member_TCC1`.
 Q.E.D.

C.184.2 PointerToMemberExpressions.ptm_arrow_TCC1

Terse proof for `ptm_arrow_TCC1`.

`ptm_arrow_TCC1`:

$\{1\} \quad \forall ((\text{ptm_typ} : \text{Cpp_Subtype}(\text{cv}(\text{pointer_to_member?}))),$ $\quad \text{ofs} : (\text{range_ptm}(\text{cv_base}(\text{ptm_typ})))) :$ $\quad \text{Cpp_Type?}(\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ})))) \wedge$ $\quad \text{cv}(\text{extend}[\text{Cpp_Type_}, \text{Cpp_Type}, \text{bool}, \text{FALSE}]$ $\quad \quad (\lambda (t : \text{Cpp_Type}) :$ $\quad \quad \quad \text{pointer?}(t) \wedge (\text{class?}(\text{typ}(t)) \vee \text{union?}(\text{typ}(t))))$ $\quad (\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}))))$
--

Repeatedly Skolemizing and flattening,

Using lemma `cv_base_result`,

we get 2 subgoals:

`ptm_arrow_TCC1.1`:

$\{-1\} \quad \text{pointer_to_member?}(\text{cv_base}(\text{ptm_typ}'))$ $\{-2\} \quad \text{Cpp_Type?}(\text{ptm_typ}')$ $\{-3\} \quad \text{cv}(\text{pointer_to_member?})(\text{ptm_typ}')$ $\{-4\} \quad \text{range_ptm}(\text{cv_base}(\text{ptm_typ}'))(\text{ofs}')$
$\{1\} \quad \text{Cpp_Type?}(\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}')))) \wedge$ $\quad \text{cv}(\text{extend}[\text{Cpp_Type_}, \text{Cpp_Type}, \text{bool}, \text{FALSE}]$ $\quad \quad (\lambda (t : \text{Cpp_Type}) : \text{pointer?}(t) \wedge (\text{class?}(\text{typ}(t)) \vee \text{union?}(\text{typ}(t))))$ $\quad (\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}'))))$

Case splitting on `Cpp_Type?(pointer(typ(cv_base(ptm_typ!1))))`,

we get 3 subgoals:

`ptm_arrow_TCC1.1.1`:

$\{-1\} \quad \text{Cpp_Type?}(\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}'))))$ $\{-2\} \quad \text{pointer_to_member?}(\text{cv_base}(\text{ptm_typ}'))$ $\{-3\} \quad \text{Cpp_Type?}(\text{ptm_typ}')$ $\{-4\} \quad \text{cv}(\text{pointer_to_member?})(\text{ptm_typ}')$ $\{-5\} \quad \text{range_ptm}(\text{cv_base}(\text{ptm_typ}'))(\text{ofs}')$
$\{1\} \quad \text{Cpp_Type?}(\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}')))) \wedge$ $\quad \text{cv}(\text{extend}[\text{Cpp_Type_}, \text{Cpp_Type}, \text{bool}, \text{FALSE}]$ $\quad \quad (\lambda (t : \text{Cpp_Type}) : \text{pointer?}(t) \wedge (\text{class?}(\text{typ}(t)) \vee \text{union?}(\text{typ}(t))))$ $\quad (\text{pointer}(\text{typ}(\text{cv_base}(\text{ptm_typ}'))))$

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of `extend`,

Keeping (-1 -2 -4 1) and hiding `*`,

Adding type constraints for `typ(cv_base(ptm_typ!1))`,

Simplifying, rewriting, and recording with decision procedures,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `ptm_arrow_TCC1.1.1`.

C Proof scripts

ptm_arrow_TCC1.1.2:

{-1}	pointer_to_member?(cv_base(ptm_typ'))
{-2}	Cpp_Type?(ptm_typ')

{-4}	$\text{cv}(\text{pointer_to_member?})(\text{ptm_typ}')$
{-5}	$\text{range_ptm}(\text{cv_base}(\text{ptm_typ}'))(\text{ofs}')$
{1}	$\begin{aligned} & \text{no_pointers_to_bitfield?}(t') \wedge \\ & \text{no_pointers_to_references?}(t') \wedge \\ & \text{no_cv_references?}(t') \wedge \\ & \text{no_reference_to_reference?}(t') \wedge \\ & \text{no_reference_to_bitfields?}(t') \wedge \\ & \text{no_pointer_to_member_to_reference?}(t') \wedge \\ & \text{no_pointer_to_member_to_cv_void?}(t') \wedge \\ & \text{no_cv_void_parameter?}(t') \wedge \\ & \text{no_array_of_references?}(t') \wedge \\ & \text{no_array_of_cv_void?}(t') \wedge \\ & \text{no_array_of_function?}(t') \wedge \\ & \text{no_array_of_abstract_class?}(t') \wedge \\ & \text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge \\ & \text{no_array_return_type?}(t') \wedge \\ & \text{no_function_return_type?}(t') \wedge \\ & \text{bitfield_underlying_integral_or_enum_type?}(t') \wedge \\ & \text{cv_array?}(t') \wedge \\ & \text{enum_underlying_integral?}(t') \wedge \\ & \text{enum_constants?}(t') \wedge \\ & \text{const_volatile?}(t') \wedge \\ & \text{const_stutter?}(t') \wedge \\ & \text{volatile_stutter?}(t') \wedge \\ & \text{no_cv_class?}(t') \wedge \\ & \text{no_cv_union?}(t') \wedge \\ & \text{no_cv_function?}(t') \wedge \\ & \text{no_reference_to_void?}(t') \wedge \\ & \text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t') \end{aligned}$

which is trivially true.

This completes the proof of `ptm_arrow_TCC1.1.2.2.1`.

`ptm_arrow_TCC1.1.2.2.2`:

<pre> {-1} subterm(t', typ(cv_base(ptm_typ'))) {-2} pointer_to_member?(cv_base(ptm_typ')) {-3} cv(pointer_to_member?)(ptm_typ') {-4} range_ptm(cv_base(ptm_typ'))(ofs') </pre>	<hr style="border: 0.5px solid black;"/> <pre> {1} subterm(t', ptm_typ') {2} no_pointers_to_bitfield?(t') ∧ no_pointers_to_references?(t') ∧ no_cv_references?(t') ∧ no_reference_to_reference?(t') ∧ no_reference_to_bitfields?(t') ∧ no_pointer_to_member_to_reference?(t') ∧ no_pointer_to_member_to_cv_void?(t') ∧ no_cv_void_parameter?(t') ∧ no_array_of_references?(t') ∧ no_array_of_cv_void?(t') ∧ no_array_of_function?(t') ∧ no_array_of_abstract_class?(t') ∧ no_pointer_or_ref_to_incomplete_array_parameter?(t') ∧ no_array_return_type?(t') ∧ no_function_return_type?(t') ∧ bitfield_underlying_integral_or_enum_type?(t') ∧ cv_array?(t') ∧ enum_underlying_integral?(t') ∧ enum_constants?(t') ∧ const_volatile?(t') ∧ const_stutter?(t') ∧ volatile_stutter?(t') ∧ no_cv_class?(t') ∧ no_cv_union?(t') ∧ no_cv_function?(t') ∧ no_reference_to_void?(t') ∧ no_cv_void?(t') ∧ no_array_of_bitfields?(t') </pre>
--	---

Hiding formulas: 2,

Using lemma `subterm_cv_base`,

Adding type constraints for `typ(cv_base(ptm_typ!1))`,

Simplifying, rewriting, and recording with decision procedures,

Expanding the definition of `subterm`,

Replacing using formula -3,

Using lemma `subterm_transitive`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of `subterm`,

which is trivially true.

This completes the proof of `ptm_arrow_TCC1.1.2.2.2`.

ptm_arrow_TCC1.1.3:

{-1}	pointer_to_member?(cv_base(ptm_typ'))
{-2}	Cpp_Type?(ptm_typ')
{-3}	cv(pointer_to_member?)(ptm_typ')
{-4}	range_ptm(cv_base(ptm_typ'))(ofs')
{1}	array?(cv_base(ptm_typ')) \vee pointer?(cv_base(ptm_typ')) \vee reference?(cv_base(ptm_typ')) \vee bitfield?(cv_base(ptm_typ')) \vee enum?(cv_base(ptm_typ')) \vee pointer_to_member?(cv_base(ptm_typ')) \vee const?(cv_base(ptm_typ')) \vee volatile?(cv_base(ptm_typ'))
{2}	Cpp_Type?(pointer(typ(cv_base(ptm_typ')))) \wedge cv(extend[Cpp_Type_, Cpp_Type, bool, FALSE] ($\lambda (t: \text{Cpp_Type}): \text{pointer?}(t) \wedge (\text{class?}(\text{typ}(t)) \vee \text{union?}(\text{typ}(t)))$)) (pointer(typ(cv_base(ptm_typ')))))

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of ptm_arrow_TCC1.1.3.

ptm_arrow_TCC1.2:

{-1}	Cpp_Type?(ptm_typ')
{-2}	cv(pointer_to_member?)(ptm_typ')
{-3}	range_ptm(cv_base(ptm_typ'))(ofs')
{1}	(pointer_to_member? \subseteq interpreted?)
{2}	Cpp_Type?(pointer(typ(cv_base(ptm_typ')))) \wedge cv(extend[Cpp_Type_, Cpp_Type, bool, FALSE] ($\lambda (t: \text{Cpp_Type}): \text{pointer?}(t) \wedge (\text{class?}(\text{typ}(t)) \vee \text{union?}(\text{typ}(t)))$)) (pointer(typ(cv_base(ptm_typ')))))

Keeping (1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of ptm_arrow_TCC1.2.
 Q.E.D.

C.185 Proofs for Posnat_induction (vfiasco-prelude.pvs)

C.185.1 Posnat_induction.posnat_induction

Terse proof for posnat_induction.

posnat_induction:

{1}	$\forall (p: \text{pred}[\text{posnat}]):$ $(p(1) \wedge (\forall j: p(j) \supset p(j+1))) \supset (\forall i: p(i))$
-----	--

For the top quantifier in 1, we introduce Skolem constants: (p'),
 Applying disjunctive simplification to flatten sequent,
 Inducting on i on formula 1,
 we get 3 subgoals:

C Proof scripts

posnat_induction.1:

{-1}	$p'(1)$
{-2}	$\forall j: p'(j) \supset p'(j+1)$
<hr/>	
{1}	$i' > 0$
{2}	$p'(i')$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of posnat_induction.1.

posnat_induction.2:

{-1}	$p'(1)$
{-2}	$\forall j: p'(j) \supset p'(j+1)$
<hr/>	
{1}	$0 > 0 \supset p'(0)$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of posnat_induction.2.

posnat_induction.3:

{-1}	$p'(1)$
{-2}	$\forall j: p'(j) \supset p'(j+1)$
<hr/>	
{1}	$\forall j: (j > 0 \supset p'(j)) \supset j+1 > 0 \supset p'(j+1)$

Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
we get 2 subgoals:

posnat_induction.3.1:

{-1}	$j' \geq 0$
{-2}	$j' > 0 \supset p'(j')$
{-3}	$j' + 1 > 0$
{-4}	$p'(1)$
{-5}	$p'(j') \supset p'(j'+1)$
<hr/>	
{1}	$p'(j'+1)$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of posnat_induction.3.1.

posnat_induction.3.2:

{-1}	$j' \geq 0$
{-2}	$j' > 0 \supset p'(j')$
{-3}	$j' + 1 > 0$
{-4}	$p'(1)$
<hr/>	
{1}	$j' > 0$
{2}	$p'(j'+1)$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of posnat_induction.3.2.

Q.E.D.

C.186 Proofs for PostfixExpressions (expressions.pvs)

C.186.1 PostfixExpressions.postinc_TCC1

Terse proof for postinc_TCC1.

postinc_TCC1:

{1} $\forall ((\text{typ: Cpp_Subtype}(v(\text{non_bool_integral?})))): \text{cv}(\text{non_bool_integral_enum?})(\text{typ})$
--

Repeatedly Skolemizing and flattening,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of postinc_TCC1.
 Q.E.D.

C.186.2 PostfixExpressions.postinc_float_TCC1

Terse proof for postinc_float_TCC1.

postinc_float_TCC1:

{1} $\forall ((\text{typ: Cpp_Subtype}(v(\text{floating_point?})))): \text{cv}(\text{floating_point?})(\text{typ})$
--

Repeatedly Skolemizing and flattening,
 Hiding formulas: -1,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of postinc_float_TCC1.
 Q.E.D.

C.186.3 PostfixExpressions.postinc_float_TCC2

Terse proof for postinc_float_TCC2.

postinc_float_TCC2:

{1} $\forall ((\text{typ: Cpp_Subtype}(v(\text{floating_point?})))): \text{floating_point?}(\text{cv_base}(\text{typ}))$
--

Repeatedly Skolemizing and flattening,
 Rewriting using cv_base_result, matching in *,
 we get 2 subgoals:

postinc_float_TCC2.1:

{-1} Cpp_Type?(typ')
{-2} v(floating_point?)(typ')
{1} cv(floating_point?)(typ')
{2} floating_point?(cv_base(typ'))

Using lemma postinc_float_TCC1,
 This completes the proof of postinc_float_TCC2.1.

postinc_float_TCC2.2:

{-1} Cpp_Type?(typ')
{-2} v(floating_point?)(typ')
{1} (floating_point? \subseteq interpreted?)
{2} floating_point?(cv_base(typ'))

Keeping (1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of postinc_float_TCC2.2.
 Q.E.D.

C.186.4 PostfixExpressions.postinc_float_TCC3

Terse proof for postinc_float_TCC3.

postinc_float_TCC3:

$$\{1\} \quad \forall ((\text{typ}: \text{Cpp_Subtype}(v(\text{floating_point?}))), \\ n: (\text{range_floating_point}(\text{cv_base}(\text{typ})))): \\ \text{cv}(\text{floating_point?})(\text{cv_base}(\text{typ}))$$

Repeatedly Skolemizing and flattening,
Keeping (-2 1) and hiding *,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of postinc_float_TCC3.
Q.E.D.

C.187 Proofs for PrimaryExpressions (expressions.pvs)

This theory contains no provable formal statements.

C.188 Proofs for Pte_type (paging-data.pvs)

This theory contains no provable formal statements.

C.189 Proofs for Pte_type_adt (Pte_type_adt.pvs)

C.189.1 Pte_type_adt.Pte_TCC1

Terse proof for Pte_TCC1.

Pte_TCC1:

$$\{1\} \quad \forall (a: \text{Memory_Address_4G}): \text{offset}(a) \geq 0$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of Pte_TCC1.
Q.E.D.

C.190 Proofs for Pte_type_adt_reduce (Pte_type_adt.pvs)

This theory contains no provable formal statements.

C.191 Proofs for Random_Device (random_device.pvs)

C.191.1 Random_Device.base_TCC1

Terse proof for base_TCC1.

base_TCC1:

{1} $\exists (x: (\{m: \text{Memory_Address_4G} \mid m + \text{size} \leq \text{max_linear}\}))$: TRUE

Instantiating the top quantifier in 1 with the terms: (Mem(0)),
we get 2 subgoals:

base_TCC1.1:

{1} TRUE

which is trivially true.

This completes the proof of base_TCC1.1.

base_TCC1.2:

{1} $\text{Mem}?(\text{Mem}(0)' \text{type_of}) \wedge$
 $(0 \leq \text{Mem}(0)' \text{offset} \wedge \text{Mem}(0)' \text{offset} < \text{max_linear_offset}) \wedge$
 $\text{Mem}(0) + \text{size} \leq \text{max_linear}$

Using lemma dt_uint_size,

Expanding the definition of max_linear,

Expanding the definition of Mem,

Expanding the definition of +,

Expanding the definition of size,

Expanding the definition of <=,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of base_TCC1.2.

Q.E.D.

C.191.2 Random_Device.rnd_seed_TCC1

Terse proof for rnd_seed_TCC1.

rnd_seed_TCC1:

{1} $0 \leq (\text{base} + 0 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} \wedge$
 $(\text{base} + 0 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} < \text{max_linear_offset}$

Installing automatic rewrites from: + < ertimes_ax

Adding type constraints for base,

Expanding the definition of size,

Using lemma dt_uint_size,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of rnd_seed_TCC1.

Q.E.D.

C.191.3 Random_Device.mem_cnt_TCC1

Terse proof for mem_cnt_TCC1.

mem_cnt_TCC1:

{1} $0 \leq (\text{base} + 1 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} \wedge$
 $(\text{base} + 1 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} < \text{max_linear_offset}$

C Proof scripts

Using lemma `dt_uint_size`,
Adding type constraints for `base`,
Installing automatic rewrites from: `+ <= < max_linear size Mem ertimes_ax`
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `mem_cnt_TCC1`.
Q.E.D.

C.191.4 Random_Device.rnd_val_TCC1

Terse proof for `rnd_val_TCC1`.

`rnd_val_TCC1`:

$$\{1\} \quad 0 \leq (\text{base} + 2 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} \wedge \\ (\text{base} + 2 \times \text{size}(\text{uidt}(\text{dt_uint})))' \text{offset} < \text{max_linear_offset}$$

Using lemma `dt_uint_size`,
Adding type constraints for `base`,
Installing automatic rewrites from: `+ <= < max_linear size Mem ertimes_ax`
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `rnd_val_TCC1`.
Q.E.D.

C.191.5 Random_Device.increase_access_count_TCC1

Terse proof for `increase_access_count_TCC1`.

`increase_access_count_TCC1`:

$$\{1\} \quad \forall (s: \text{Random_device_memory}, n: \text{nat}): \\ s' \text{expansion}' \text{counter_offset} \leq n + \text{access_count}(s)$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `access_count`,
Adding type constraints for `s!1'expansion'counter_offset`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `increase_access_count_TCC1`.
Q.E.D.

C.191.6 Random_Device.clear_counter_TCC1

Terse proof for `clear_counter_TCC1`.

`clear_counter_TCC1`:

$$\{1\} \quad \forall (s: \text{Random_device_memory}): \text{access_count}(s) \leq s' \text{expansion}' \text{memory_access_count}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `clear_counter_TCC1`.
Q.E.D.

C.191.7 Random_Device.random_TCC1

Terse proof for random_TCC1.

random_TCC1:

$\{1\} \quad \exists (x_1: \text{[[nat, nat]} \rightarrow \{l: \text{list[Byte]} \mid \text{length[Byte]}(l) = \text{size}(\text{uidt}(\text{dt_uint}))\}]):$ <p style="text-align: center;">TRUE</p>
--

Instantiating the top quantifier in 1 with the terms: $(\lambda (n_1, n_2: \text{nat}): \text{choose}(\lambda (l: \text{list[Byte]}): \text{length}(l) = \text{size}(\text{uidt}(\text{dt_uint}))))$,

we get 2 subgoals:

random_TCC1.1:

$\{1\} \quad \text{TRUE}$

which is trivially true.

This completes the proof of random_TCC1.1.

random_TCC1.2:

$\{1\} \quad \text{nonempty?}[\text{list[Byte]}]$ $(\lambda (l: \text{list[Byte]}): \text{length[Byte]}(l) = \text{size}(\text{uidt}(\text{dt_uint})))$
--

Expanding the definition of nonempty?,

Expanding the definition of empty?,

Expanding the definition of member,

Rewriting using forall_not, matching in *,

Using lemma list_all_length[Byte],

This completes the proof of random_TCC1.2.

Q.E.D.

C.191.8 Random_Device.read_mem_cnt_TCC1

Terse proof for read_mem_cnt_TCC1.

read_mem_cnt_TCC1:

$\{1\} \quad \forall (a: \text{Address}, \text{bl}: \text{list[Byte]}):$ $\text{cons?}(\text{bl}) \wedge a = \text{mem_cnt} \supset (\forall (s: \text{Random_device_memory}): \text{non_bool_integral?}(\text{uint}))$
--

Repeatedly Skolemizing and flattening,

Keeping (1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of read_mem_cnt_TCC1.

Q.E.D.

C.191.9 Random_Device.read_mem_cnt_TCC2

Terse proof for read_mem_cnt_TCC2.

read_mem_cnt_TCC2:

$$\frac{\{1\} \quad \forall (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]): \text{cons}?(bl) \wedge a = \text{mem_cnt} \supset (\forall (s: \text{Random_device_memory}): \text{max_value}(\text{uint}) \geq 0 \wedge \text{max_value}(\text{uint}) > 0)}{\quad}$$

Repeatedly Skolemizing and flattening,

Keeping (1) and hiding *,

Expanding the definition of max_value,

Expanding the definition of range_integral,

Using lemma max_uint,

Using lemma max_uint_bits,

Using lemma pos_expt_gt,

Case splitting on $\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})$,

we get 2 subgoals:

read_mem_cnt_TCC2.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \\ \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}) \\ \{-2\} \quad \text{max_value_bits_uint} < 2 \wedge \text{max_value_bits_uint} \\ \{-3\} \quad \text{max_value_bits_uint} \geq 16 \\ \{-4\} \quad \text{max}(\text{range_uint}) \geq (2 \wedge \text{max_value_bits_uint}) - 1 \end{array}}{\{1\} \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}))) \geq 0 \wedge \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}))) > 0}$$

Replacing using formula -1,

Using lemma max_stable_under_extension[real, nat, ≤],

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of read_mem_cnt_TCC2.1.

read_mem_cnt_TCC2.2:

$$\frac{\begin{array}{l} \{-1\} \quad \text{max_value_bits_uint} < 2 \wedge \text{max_value_bits_uint} \\ \{-2\} \quad \text{max_value_bits_uint} \geq 16 \\ \{-3\} \quad \text{max}(\text{range_uint}) \geq (2 \wedge \text{max_value_bits_uint}) - 1 \end{array}}{\begin{array}{l} \{1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \\ \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}) \\ \{2\} \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}))) \geq 0 \wedge \\ \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}))) > 0 \end{array}}$$

Keeping (1) and hiding *,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of read_mem_cnt_TCC2.2.

Q.E.D.

C.191.10 Random_Device.read_mem_cnt_TCC3

Terse proof for read_mem_cnt_TCC3.

read_mem_cnt_TCC3:

$$\frac{\{1\} \quad \forall (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]): \\ \text{cons?}(\text{bl}) \wedge a = \text{mem_cnt} \supset \\ (\forall (s: \text{Random_device_memory}): \\ (\text{range_uint})(\text{rem}(\text{max_value}(\text{uint})) \\ (\text{access_count}(s) - \text{counter_offset}(s))))}{}$$

Repeatedly Skolemizing and flattening,

Keeping (1) and hiding *,

Adding type constraints for $\text{rem}(\text{max_value}(\text{uint}))(\text{access_count}(s!1) - \text{counter_offset}(s!1))$,

we get 2 subgoals:

read_mem_cnt_TCC3.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{rem}(\text{max_value}(\text{uint}))(\text{access_count}(s') - \text{counter_offset}(s')) < \text{max_value}(\text{uint}) \\ \{-2\} \quad \exists q: \\ \quad \text{access_count}(s') - \text{counter_offset}(s') = \\ \quad \text{rem}(\text{max_value}(\text{uint}))(\text{access_count}(s') - \text{counter_offset}(s')) + \text{max_value}(\text{uint}) \times q \end{array}}{\{1\} \quad (\text{range_uint})(\text{rem}(\text{max_value}(\text{uint}))(\text{access_count}(s') - \text{counter_offset}(s')))}{}$$

Using lemma binary_range_uint,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-1 2) and hiding *,

Expanding the definition of max_value,

Expanding the definition of range_integral,

Case splitting on $\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})$,

we get 2 subgoals:

read_mem_cnt_TCC3.1.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \\ \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}) \\ \{-2\} \quad \text{rem}(\text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})))) \\ \quad (\text{access_count}(s') - \text{counter_offset}(s')) \\ \quad < \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})))) \end{array}}{\{1\} \quad \text{rem}(\text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})))) \\ (\text{access_count}(s') - \text{counter_offset}(s')) \\ \leq \text{max}(\text{range_uint})}{}$$

Replacing using formula -1,

Using lemma max_stable_under_extension[real, nat, ≤],

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of read_mem_cnt_TCC3.1.1.

read_mem_cnt_TCC3.1.2:

$$\frac{\{-1\} \quad \text{rem}(\text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})))) \\ (\text{access_count}(s') - \text{counter_offset}(s')) \\ < \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint}))))}{\{1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})) = \\ \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})} \\ \{2\} \quad \text{rem}(\text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}] (\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}] (\text{range_uint})))) \\ (\text{access_count}(s') - \text{counter_offset}(s')) \\ \leq \text{max}(\text{range_uint})$$

Keeping (1) and hiding *,

C Proof scripts

Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `read_mem_cnt_TCC3.1.2`.
`read_mem_cnt_TCC3.2`:

$\{1\}$ $\text{max_value}(\text{uint}) \geq 0$ $\{2\}$ $(\text{range_uint})(\text{rem}(\text{max_value}(\text{uint}))(\text{access_count}(s') - \text{counter_offset}(s')))$
--

Using lemma `read_mem_cnt_TCC2`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `read_mem_cnt_TCC3.2`.
Q.E.D.

C.191.11 Random_Device.read_seed_TCC1

Terse proof for `read_seed_TCC1`.

`read_seed_TCC1`:

$\{1\}$ $\forall (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $\text{cons}?(bl) \wedge a = \text{rnd_seed} \supset (\forall (s: \text{Random_device_memory}): \text{non_bool_integral}?(uint))$

Repeatedly Skolemizing and flattening,
Expanding the definition of `non_bool_integral?`,
Expanding the definition of `unsigned_integer?`,
which is trivially true.
This completes the proof of `read_seed_TCC1`.
Q.E.D.

C.191.12 Random_Device.read_seed_TCC2

Terse proof for `read_seed_TCC2`.

`read_seed_TCC2`:

$\{1\}$ $\forall (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]):$ $\text{cons}?(bl) \wedge a = \text{rnd_seed} \supset$ $(\forall (s: \text{Random_device_memory}): \text{max_value}(\text{uint}) \geq 0 \wedge \text{max_value}(\text{uint}) > 0)$
--

Repeatedly Skolemizing and flattening,
Keeping (1) and hiding *,
Using lemma `max_uint`,
Using lemma `max_uint_bits`,
Using lemma `pos_expt_gt`,
Expanding the definition of `max_value`,
Expanding the definition of `range_integral`,
Case splitting on `extend[real, int, bool, FALSE] (extend[int, nat, bool, FALSE](range_uint)) = extend[real, nat, bool, FALSE](range_uint)`,
we get 2 subgoals:

read_seed_TCC2.1:

$$\begin{array}{l}
 \{-1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint})) = \\
 \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}) \\
 \{-2\} \quad \text{max_value_bits_uint} < 2 \wedge \text{max_value_bits_uint} \\
 \{-3\} \quad \text{max_value_bits_uint} \geq 16 \\
 \{-4\} \quad \text{max}(\text{range_uint}) \geq (2 \wedge \text{max_value_bits_uint}) - 1 \\
 \hline
 \{1\} \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}))) \geq 0 \wedge \\
 \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}))) > 0
 \end{array}$$

Replacing using formula -1,

Using lemma max_stable_under_extension[real, nat, ≤],

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of read_seed_TCC2.1.

read_seed_TCC2.2:

$$\begin{array}{l}
 \{-1\} \quad \text{max_value_bits_uint} < 2 \wedge \text{max_value_bits_uint} \\
 \{-2\} \quad \text{max_value_bits_uint} \geq 16 \\
 \{-3\} \quad \text{max}(\text{range_uint}) \geq (2 \wedge \text{max_value_bits_uint}) - 1 \\
 \hline
 \{1\} \quad \text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint})) = \\
 \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}) \\
 \{2\} \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}))) \geq 0 \wedge \\
 \quad \text{max}(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}))) > 0
 \end{array}$$

Keeping (1) and hiding *,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of read_seed_TCC2.2.

Q.E.D.

C.191.13 Random_Device.read_seed_TCC3

Terse proof for read_seed_TCC3.

read_seed_TCC3:

$$\begin{array}{l}
 \{1\} \quad \forall (a: \text{Address}, \text{bl}: \text{list}[\text{Byte}]): \\
 \quad \text{cons}?(bl) \wedge a = \text{rnd_seed} \supset \\
 \quad (\forall (s: \text{Random_device_memory}): (\text{range_uint})(\text{rem}(\text{max_value}(\text{uint}))(\text{seed}(s))))
 \end{array}$$

Repeatedly Skolemizing and flattening,

Using lemma read_seed_TCC2,

Using lemma binary_range_uint,

we get 2 subgoals:

C Proof scripts

read_seed_TCC3.1:

{-1}	range_uint(rem(max_value(uint))(seed(s'))) \equiv rem(max_value(uint))(seed(s')) \leq max(range_uint)
{-2}	cons?(bl') \wedge a' = rnd_seed \supset (\forall (s: Random_device_memory): max_value(uint) \geq 0 \wedge max_value(uint) $>$ 0)
{-3}	every(λ (x: number): number_field_pred(x) \wedge real_pred(x) \wedge rational_pred(x) \wedge integer_pred(x) \wedge x \geq 0 \wedge x $<$ max_byte)
	(bl')
{-4}	cons?(bl')
{-5}	a' = rnd_seed
{1}	(range_uint)(rem(max_value(uint))(seed(s')))

Adding type constraints for rem(max_value(uint))(seed(s!1)),

we get 2 subgoals:

read_seed_TCC3.1.1:

{-1}	rem(max_value(uint))(seed(s')) $<$ max_value(uint)
{-2}	\exists q: seed(s') = rem(max_value(uint))(seed(s')) + max_value(uint) \times q
{-3}	range_uint(rem(max_value(uint))(seed(s'))) \equiv rem(max_value(uint))(seed(s')) \leq max(range_uint)
{-4}	cons?(bl') \wedge a' = rnd_seed \supset (\forall (s: Random_device_memory): max_value(uint) \geq 0 \wedge max_value(uint) $>$ 0)
{-5}	every(λ (x: number): number_field_pred(x) \wedge real_pred(x) \wedge rational_pred(x) \wedge integer_pred(x) \wedge x \geq 0 \wedge x $<$ max_byte)
	(bl')
{-6}	cons?(bl')
{-7}	a' = rnd_seed
{1}	(range_uint)(rem(max_value(uint))(seed(s')))

Expanding the definition of max_value,

Expanding the definition of range_integral,

Case splitting on extend[real, int, bool, FALSE] (extend[int, nat, bool, FALSE](range_uint)) = extend[real, nat, bool, FALSE](range_uint),

we get 2 subgoals:

read_seed_TCC3.1.1.1.1:

$$\begin{array}{l}
 \{-1\} \text{ extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint})) = \\
 \quad \text{extend}[\text{real}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}) \\
 \{-2\} \text{ rem}(\max(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint})))) \\
 \quad (\text{seed}(s')) \\
 \quad < \max(\text{extend}[\text{real}, \text{int}, \text{bool}, \text{FALSE}](\text{extend}[\text{int}, \text{nat}, \text{bool}, \text{FALSE}](\text{range_uint}))) \\
 \{-3\} \exists q: \\
 \quad \text{seed}(s') = \\

Q.E.D.

C.192 Proofs for Read_After_Write_Fails (datatype_model.pvs)

C.192.1 Read_After_Write_Fails.plain_mem_write_list_states_TCC1

Terse proof for `plain_mem_write_list_states_TCC1`.

`plain_mem_write_list_states_TCC1`:

<div style="display: flex; flex-direction: column; gap: 5px;"> <div style="display: flex; align-items: flex-start;"> {1} $\forall (a: \text{Address}, pm: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, bl: \text{list}[\text{Byte}]):$ </div> <div style="margin-left: 20px;"> $\text{size} = \text{length}(bl) \wedge$ $\text{plain_memory?}(pm) \wedge$ $pm \text{'states}(s) \wedge$ $(\text{address_block}(a, \text{size}) \subseteq pm \text{'rw_addr}) \wedge$ $\text{OK?}(\text{memory_write_list}(pm \text{'mem})(a, bl)(s))$ </div> <div style="margin-left: 20px;"> \supset </div> <div style="margin-left: 20px;"> $\text{OK?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](pm \text{'mem})(a, bl)(s)) \vee$ $\text{Exception?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](pm \text{'mem})(a, bl)(s))$ </div> </div>	<hr style="border: 0.5px solid black;"/>
--	--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `plain_mem_write_list_states_TCC1`.

Q.E.D.

C.192.2 Read_After_Write_Fails.plain_mem_write_list_states

Terse proof for `plain_mem_write_list_states`.

C Proof scripts

`plain_mem_write_list_states:`

<pre>{1} ∃ (a: Address, pm: Plain_Memory[State], s: State, size: nat, bl: list[Byte]): size = length(bl) ∧ plain_memory?(pm) ∧ pm' states(s) ∧ (address_block(a, size) ⊆ pm'rw_addr) ∧ OK?(memory_write_list(pm' mem)(a, bl)(s)) ⊃ pm' states(state(memory_write_list(pm' mem)(a, bl)(s)))</pre>

Repeatedly Skolemizing and flattening,

Using lemma `transformer_invariant_write_list[State]`,

Replacing using formula -4,

Using lemma `plain_memory_side_effect_content_unchanged_write_block`,

Replacing using formula -4,

Replacing using formula -3,

Replacing using formula -6,

Replacing using formula -1,

Rewriting using `add_as_union`, matching in *,

Rewriting using `transformer_invariant_union_transformers`, matching in *,

we get 3 subgoals:

`plain_mem_write_list_states.1:`

<pre>{-1} side_effect_content_unchanged(address_block(a', length(bl')), pm' states, memory_write_side_effect(pm' mem)) {-2} result_pred(pm' states)(expr_2_super(memory_write_list(pm' mem)(a', bl'))(s')) {-3} size' = length(bl') {-4} plain_memory?(pm') {-5} pm' states(s') {-6} (address_block(a', length(bl')) ⊆ pm'rw_addr) {-7} OK?(memory_write_list(pm' mem)(a', bl')(s'))</pre> <hr/> <pre>{1} pm' states(state(memory_write_list(pm' mem)(a', bl')(s')))</pre>

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `plain_mem_write_list_states.1`.

`plain_mem_write_list_states.2:`

<pre>{-1} side_effect_content_unchanged(address_block(a', length(bl')), pm' states, memory_write_side_effect(pm' mem)) {-2} transformer_invariant?(pm' states, (memory_write_transformers(pm' mem, address_block(a', length(bl')) ⊃ result_pred(pm' states)(expr_2_super(memory_write_list(pm' mem)(a', bl'))(s')))) {-3} size' = length(bl') {-4} plain_memory?(pm') {-5} pm' states(s') {-6} (address_block(a', length(bl')) ⊆ pm'rw_addr) {-7} OK?(memory_write_list(pm' mem)(a', bl')(s'))</pre> <hr/> <pre>{1} transformer_invariant?(pm' states, memory_write_transformers(pm' mem, address_block(a', length(bl')) ⊃ result_pred(pm' states)(expr_2_super(memory_write_list(pm' mem)(a', bl'))(s')))) {2} pm' states(state(memory_write_list(pm' mem)(a', bl')(s')))</pre>

Using lemma `plain_memory_invariant_write_block`,

Replacing using formula -5,

Replacing using formula -7,

which is trivially true.

This completes the proof of plain_mem_write_list_states.2.

plain_mem_write_list_states.3:

{-1}	side_effect_content_unchanged(address_block(a', length(bl')), pm' 'states, memory_write_side_effect(pm' 'mem))
{-2}	transformer_invariant?(pm' 'states, (memory_write_transformers(pm' 'mem, address_block(a', length(bl'))) ∪ singleton ⊃ result_pred(pm' 'states)(expr_2_super(memory_write_list(pm' 'mem)(a', bl'))(s'))
{-3}	size' = length(bl')
{-4}	plain_memory?(pm')
{-5}	pm' 'states(s')
{-6}	(address_block(a', length(bl'))) ⊆ pm' 'rw_addr
{-7}	OK?(memory_write_list(pm' 'mem)(a', bl')(s'))
{1}	transformer_invariant?(pm' 'states, singleton(expr_2_super(memory_write_side_effect(pm' 'mem) (a', bl', FALSE))))
{2}	pm' 'states(state(memory_write_list(pm' 'mem)(a', bl')(s'))

Using lemma plain_memory_transformer_invariant_write_side_effects,

Replacing using formula -5,

Replacing using formula -7,

Applying transformer_invariant_mono_transformers where transformers_1 gets singleton(expr_2_super(memory_write_side_effect(pm!1, bl!1, FALSE))), transformers_2 gets memory_write_side_effect_super_transformers(pm!1'mem, address_block(a!1, length(bl!1))),

Instantiating quantified variables,

Replacing using formula -2,

Hiding formulas: -2, -3, -4, 2,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Hiding formulas: 2,

Expanding the definition of subset?,

Expanding the definition of memory_write_side_effect_super_transformers,

Expanding the definition of expr_2_super,

Expanding the definition of singleton,

Expanding the definition of member,

Repeatedly Skolemizing and flattening,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_mem_write_list_states.3.

Q.E.D.

C.192.3 Read_After_Write_Fails.plain_mem_write_list_read_list_ok

Terse proof for plain_mem_write_list_read_list_ok.

plain_mem_write_list_read_list_ok:

$\{1\} \quad \forall (a: \text{Address}, pm: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, \text{bl}: \text{list}[\text{Byte}]):$ $\text{size} = \text{length}(\text{bl}) \wedge$ $\text{plain_memory?}(pm) \wedge$ $pm' \text{states}(s) \wedge$ $(\text{address_block}(a, \text{size}) \subseteq pm' \text{rw_addr}) \wedge$ $\text{OK?}(\text{memory_write_list}(pm' \text{mem})(a, \text{bl})(s))$ \supset $\text{OK?}(\text{memory_read_list}(pm' \text{mem})(a, \text{size})$ $(\text{state}(\text{memory_write_list}(pm' \text{mem})(a, \text{bl})(s))))$

Repeatedly Skolemizing and flattening,
Using lemma memory_read_list_ok[State],
Using lemma plain_memory_transformer_invariant_read_list_block,
Replacing using formula -4,
Applying subset_bigger_union_right where a gets address_block(a!1, size!1), b gets pm!1'ro_addr, c gets pm!1'rw_addr,
Replacing using formula -7,
Replacing using formula -1,
Replacing using formula -2,
Using lemma plain_memory_transformers_ok_read_list_block,
Replacing using formula -6,
Replacing using formula -2,
Replacing using formula -1,
Using lemma plain_mem_write_list_states,
Replacing using formula -6,
Replacing using formula -7,
Replacing using formula -8,
Replacing using formula -9,
Replacing using formula -10,
Replacing using formula -1,
which is trivially true.
This completes the proof of plain_mem_write_list_read_list_ok.

C.193 Proofs for Read_After_Write_Fails_2 (datatype_model.pvs)

C.193.1

Read_After_Write_Fails_2.plain_mem_write_list_states_TCC1

Terse proof for plain_mem_write_list_states_TCC1.

plain_mem_write_list_states_TCC1:

$\{1\} \quad \forall (a: \text{Address}, pm: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, bl: \text{list}[\text{Byte}]):$ $\text{size} = \text{length}(bl) \wedge$ $\text{plain_memory?}(pm) \wedge$ $pm' \text{states}(s) \wedge$ $(\text{address_block}(a, \text{size}) \subseteq pm' \text{rw_addr}) \wedge$ $\text{OK?}(\text{memory_write_list}(pm' \text{mem})(a, bl)(s))$ \supset $\text{OK?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](pm' \text{mem})(a, bl)(s)) \vee$ $\text{Exception?}[\text{State}, \text{Unit}](\text{memory_write_list}[\text{State}](pm' \text{mem})(a, bl)(s))$
--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of plain_mem_write_list_states_TCC1.
 Q.E.D.

C.193.2 Read_After_Write_Fails_2.plain_mem_write_list_states

Terse proof for plain_mem_write_list_states.

C Proof scripts

plain_mem_write_list_states:

{1}	$\begin{aligned} &\forall (a: \text{Address}, pm: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{size}: \text{nat}, bl: \text{list}[\text{Byte}]): \\ &\text{size} = \text{length}(bl) \wedge \\ &\text{plain_memory?}(pm) \wedge \\ &pm' \text{states}(s) \wedge \\ &(\text{address_block}(a, \text{size}) \subseteq pm' \text{rw_addr}) \wedge \\ &\text{OK?}(\text{memory_write_list}(pm' \text{mem})(a, bl)(s)) \\ &\supset pm' \text{states}(\text{state}(\text{memory_write_list}(pm' \text{mem})(a, bl)(s))) \end{aligned}$
-----	---

Repeatedly Skolemizing and flattening,

Using lemma transformer_invariant_write_list[State],

Replacing using formula -4,

Using lemma plain_memory_side_effect_content_unchanged_write_block,

Replacing using formula -4,

Replacing using formula -3,

Replacing using formula -6,

Replacing using formula -1,

Rewriting using add_as_union, matching in *,

Rewriting using transformer_invariant_union_transformers, matching in *,

we get 3 subgoals:

plain_mem_write_list_states.1:

{-1}	side_effect_content_unchanged(address_block(a', length(bl')), pm' states, memory_write_side_effect(pm' mem))
{-2}	result_pred(pm' states)(expr_2_super(memory_write_list(pm' mem)(a', bl'))(s'))
{-3}	size' = length(bl')
{-4}	plain_memory?(pm')
{-5}	pm' states(s')
{-6}	(address_block(a', length(bl')) \subseteq pm' rw_addr)
{-7}	OK?(memory_write_list(pm' mem)(a', bl')(s'))
{1}	pm' states(state(memory_write_list(pm' mem)(a', bl')(s')))

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_mem_write_list_states.1.

plain_mem_write_list_states.2:

{-1}	side_effect_content_unchanged(address_block(a', length(bl')), pm' states, memory_write_side_effect(pm' mem))
{-2}	transformer_invariant?(pm' states, (memory_write_transformers(pm' mem, address_block(a', length(bl')) \supset result_pred(pm' states)(expr_2_super(memory_write_list(pm' mem)(a', bl'))(s')))
{-3}	size' = length(bl')
{-4}	plain_memory?(pm')
{-5}	pm' states(s')
{-6}	(address_block(a', length(bl')) \subseteq pm' rw_addr)
{-7}	OK?(memory_write_list(pm' mem)(a', bl')(s'))
{1}	transformer_invariant?(pm' states, memory_write_transformers(pm' mem, address_block(a', length(bl'))))
{2}	pm' states(state(memory_write_list(pm' mem)(a', bl')(s')))

Using lemma plain_memory_invariant_write_block,

Replacing using formula -5,

Replacing using formula -7,

which is trivially true.

This completes the proof of plain_mem_write_list_states.2.

plain_mem_write_list_states.3:

{-1}	side_effect_content_unchanged(address_block(a', length(bl')), pm' 'states, memory_write_side_effect(pm' 'mem))
{-2}	transformer_invariant?(pm' 'states, (memory_write_transformers(pm' 'mem, address_block(a', length(bl'))) ∪ singleton ⊃ result_pred(pm' 'states)(expr_2_super(memory_write_list(pm' 'mem)(a', bl'))(s'))
{-3}	size' = length(bl')
{-4}	plain_memory?(pm')
{-5}	pm' 'states(s')
{-6}	(address_block(a', length(bl'))) ⊆ pm' 'rw_addr)
{-7}	OK?(memory_write_list(pm' 'mem)(a', bl')(s'))
{1}	transformer_invariant?(pm' 'states, singleton(expr_2_super(memory_write_side_effect(pm' 'mem) (a', bl', FALSE))))
{2}	pm' 'states(state(memory_write_list(pm' 'mem)(a', bl')(s')))

Using lemma plain_memory_transformer_invariant_write_side_effects,

Replacing using formula -5,

Replacing using formula -7,

Applying transformer_invariant_mono_transformers where transformers_1 gets singleton(expr_2_super(memory_write_side_effect(pm!1, bl!1, FALSE))), transformers_2 gets memory_write_side_effect_super_transformers(pm!1'mem, address_block(a!1, length(bl!1))),

Instantiating quantified variables,

Replacing using formula -2,

Hiding formulas: -2, -3, -4, 2,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Hiding formulas: 2,

Expanding the definition of subset?,

Expanding the definition of memory_write_side_effect_super_transformers,

Expanding the definition of expr_2_super,

Expanding the definition of singleton,

Expanding the definition of member,

Repeatedly Skolemizing and flattening,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of plain_mem_write_list_states.3.

Q.E.D.

C.193.3 Read_After_Write_Fails_2.plain_mem_write_list_read_list_ok

Terse proof for plain_mem_write_list_read_list_ok.

plain_mem_write_list_read_list_ok:

$\{1\} \quad \forall (a: \text{Address}, pm: \text{Plain_Memory}[\text{State}], s: \text{State}, size: \text{nat}, bl: \text{list}[\text{Byte}]):$ $size = \text{length}(bl) \wedge$ $\text{plain_memory?}(pm) \wedge$ $pm' \text{states}(s) \wedge$ $(\text{address_block}(a, size) \subseteq pm' \text{rw_addr}) \wedge$ $\text{OK?}(\text{memory_write_list}(pm' \text{mem})(a, bl)(s))$ \supset $\text{OK?}(\text{memory_read_list}(pm' \text{mem})(a, size)$ $(\text{state}(\text{memory_write_list}(pm' \text{mem})(a, bl)(s))))$

Repeatedly Skolemizing and flattening,
Using lemma memory_read_list_ok[State],
Using lemma plain_memory_transformer_invariant_read_list_block,
Replacing using formula -4,
Applying subset_bigger_union_right where a gets address_block(a!1, size!1), b gets pm!1'ro_addr, c gets pm!1'rw_addr,
Replacing using formula -7,
Replacing using formula -1,
Replacing using formula -2,
Using lemma plain_memory_transformers_ok_read_list_block,
Replacing using formula -6,

Q.E.D.

C.198 Proofs for Search_Example (search-example.pvs)

C.198.1 Search_Example.value_TCC1

Terse proof for value_TCC1.

value_TCC1:

{1}	$\exists (x: (\text{range}(\text{uint}))) : \text{TRUE}$
-----	--

Instantiating the top quantifier in 1 with the terms: (0),

we get 2 subgoals:

value_TCC1.1:

{1}	TRUE
-----	------

which is trivially true.

This completes the proof of value_TCC1.1.

value_TCC1.2:

{1} range(uint)(0)

Trying repeated skolemization, instantiation, and if-lifting,

Rewriting using binary_range_uint, matching in *,

Using lemma max_uint,

Using lemma max_uint_bits,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of value_TCC1.2.

Q.E.D.

C.198.2 Search_Example.Search_Pre_TCC1

Terse proof for Search_Pre_TCC1.

Search_Pre_TCC1:

{1} Cpp_Type?(uint) \wedge cv(non_bool_integral_enum?)(uint)

Applying propositional simplification,

we get 2 subgoals:

Search_Pre_TCC1.1:

{1} Cpp_Type?(uint)

Expanding the definition of Cpp_Type?,

Repeatedly Skolemizing and flattening,

Expanding the definition of subterm,

Installing automatic rewrites from: no_pointers_to_bitfield? no_pointers_to_references?
no_cv_references? no_reference_to_reference? no_reference_to_bitfields? no_pointer_to_member_to_reference?
no_pointer_to_member_to_cv_void? no_cv_void_parameter? no_array_of_references? no_array_of_cv_void?
no_array_of_function? no_array_of_abstract_class? no_pointer_or_ref_to_incomplete_array_parameter?
no_array_return_type? no_function_return_type? bitfield_underlying_integral_or_enum_type? cv_array?
enum_underlying_integral? enum_constants? const_volatile? const_stutter? volatile_stutter?
no_cv_class? no_cv_union? no_cv_function? no_reference_to_void? no_cv_void? no_array_of_bitfields?

Replacing using formula -1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of Search_Pre_TCC1.1.

Search_Pre_TCC1.2:

{1} cv(non_bool_integral_enum?)(uint)

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of Search_Pre_TCC1.2.

Q.E.D.

C.198.3 Search_Example.Search_Pre_TCC2

Terse proof for Search_Pre_TCC2.

C Proof scripts

Search_Pre_TCC2:

$$\{1\} \quad \forall (s: \text{State}):$$
$$\text{pm}'\text{states}(s) \wedge \text{plain_memory}'(\text{pm}) \supset$$
$$\text{Cpp_Type}'(\text{pointer}(\text{uint})) \wedge \text{cv}(\text{pointer}')(\text{pointer}(\text{uint}))$$

Repeatedly Skolemizing and flattening,

Keeping (1) and hiding *,

Applying propositional simplification,

we get 2 subgoals:

Search_Pre_TCC2.1:

$$\{1\} \quad \text{Cpp_Type}'(\text{pointer}(\text{uint}))$$

Expanding the definition of Cpp_Type?,

Expanding the definition of subterm,

Repeatedly Skolemizing and flattening,

Expanding the definition of subterm,

Installing automatic rewrites from: no_pointers_to_bitfield? no_pointers_to_references?
no_cv_references? no_reference_to_reference? no_reference_to_bitfields? no_pointer_to_member_to_reference?
no_pointer_to_member_to_cv_void? no_cv_void_parameter? no_array_of_references? no_array_of_cv_void?
no_array_of_function? no_array_of_abstract_class? no_pointer_or_ref_to_incomplete_array_parameter?
no_array_return_type? no_function_return_type? bitfield_underlying_integral_or_enum_type? cv_array?
enum_underlying_integral? enum_constants? const_volatile? const_stutter? volatile_stutter?
no_cv_class? no_cv_union? no_cv_function? no_reference_to_void? no_cv_void? no_array_of_bitfields?

Splitting conjunctions,

we get 2 subgoals:

Search_Pre_TCC2.1.1.1:

{-1}	$t' = \text{pointer}(\text{uint})$
{1}	$\begin{aligned} & \text{no_pointers_to_bitfield?}(t') \wedge \\ & \text{no_pointers_to_references?}(t') \wedge \\ & \text{no_cv_references?}(t') \wedge \\ & \text{no_reference_to_reference?}(t') \wedge \\ & \text{no_reference_to_bitfields?}(t') \wedge \\ & \text{no_pointer_to_member_to_reference?}(t') \wedge \\ & \text{no_pointer_to_member_to_cv_void?}(t') \wedge \\ & \text{no_cv_void_parameter?}(t') \wedge \\ & \text{no_array_of_references?}(t') \wedge \\ & \text{no_array_of_cv_void?}(t') \wedge \\ & \text{no_array_of_function?}(t') \wedge \\ & \text{no_array_of_abstract_class?}(t') \wedge \\ & \text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge \\ & \text{no_array_return_type?}(t') \wedge \\ & \text{no_function_return_type?}(t') \wedge \\ & \text{bitfield_underlying_integral_or_enum_type?}(t') \wedge \\ & \text{cv_array?}(t') \wedge \\ & \text{enum_underlying_integral?}(t') \wedge \\ & \text{enum_constants?}(t') \wedge \\ & \text{const_volatile?}(t') \wedge \\ & \text{const_stutter?}(t') \wedge \\ & \text{volatile_stutter?}(t') \wedge \\ & \text{no_cv_class?}(t') \wedge \\ & \text{no_cv_union?}(t') \wedge \\ & \text{no_cv_function?}(t') \wedge \\ & \text{no_reference_to_void?}(t') \wedge \\ & \text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t') \end{aligned}$

Replacing using formula -1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-2) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of Search_Pre_TCC2.1.1.1.

Search_Pre_TCC2.1.2:

{-1}	$t' = \text{uint}$
{1}	$ \begin{aligned} & \text{no_pointers_to_bitfield?}(t') \wedge \\ & \text{no_pointers_to_references?}(t') \wedge \\ & \text{no_cv_references?}(t') \wedge \\ & \text{no_reference_to_reference?}(t') \wedge \\ & \text{no_reference_to_bitfields?}(t') \wedge \\ & \text{no_pointer_to_member_to_reference?}(t') \wedge \\ & \text{no_pointer_to_member_to_cv_void?}(t') \wedge \\ & \text{no_cv_void_parameter?}(t') \wedge \\ & \text{no_array_of_references?}(t') \wedge \\ & \text{no_array_of_cv_void?}(t') \wedge \\ & \text{no_array_of_function?}(t') \wedge \\ & \text{no_array_of_abstract_class?}(t') \wedge \\ & \text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge \\ & \text{no_array_return_type?}(t') \wedge \\ & \text{no_function_return_type?}(t') \wedge \\ & \text{bitfield_underlying_integral_or_enum_type?}(t') \wedge \\ & \text{cv_array?}(t') \wedge \\ & \text{enum_underlying_integral?}(t') \wedge \\ & \text{enum_constants?}(t') \wedge \\ & \text{const_volatile?}(t') \wedge \\ & \text{const_stutter?}(t') \wedge \\ & \text{volatile_stutter?}(t') \wedge \\ & \text{no_cv_class?}(t') \wedge \\ & \text{no_cv_union?}(t') \wedge \\ & \text{no_cv_function?}(t') \wedge \\ & \text{no_reference_to_void?}(t') \wedge \\ & \text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t') \end{aligned} $

Replacing using formula -1,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of Search_Pre_TCC2.1.2.

Search_Pre_TCC2.2:

{1}	$\text{cv}(\text{pointer?})(\text{pointer}(\text{uint}))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of Search_Pre_TCC2.2.
 Q.E.D.

C.198.4 Search_Example.Search_Pre_TCC3

Terse proof for Search_Pre_TCC3.

Search_Pre_TCC3:

{1}	$\forall (s: \text{State}): \text{pm}'\text{states}(s) \wedge \text{plain_memory?}(\text{pm}) \supset \text{Cpp_Type?}(\text{pointer}(\text{uint}))$
-----	--

Repeatedly Skolemizing and flattening,
 Using lemma Search_Pre_TCC2,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of Search_Pre_TCC3.

Q.E.D.

C.198.5 Search_Example.Search_Pre_TCC4

Terse proof for Search_Pre_TCC4.

Search_Pre_TCC4:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \text{pm}'\text{states}(s) \wedge \text{plain_memory?}(\text{pm}) \supset \text{pointer?}(\text{cv_base}(\text{pointer}(\text{uint})))}$$

Repeatedly Skolemizing and flattening,

Rewriting using cv_base_result, matching in *,

we get 2 subgoals:

Search_Pre_TCC4.1:

$$\frac{\begin{array}{l} \{-1\} \quad \text{pm}'\text{states}(s') \\ \{-2\} \quad \text{plain_memory?}(\text{pm}) \end{array}}{\begin{array}{l} \{1\} \quad \text{cv}(\text{pointer?})(\text{pointer}(\text{uint})) \\ \{2\} \quad \text{pointer?}(\text{cv_base}(\text{pointer}(\text{uint}))) \end{array}}$$

Using lemma Search_Pre_TCC2,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of Search_Pre_TCC4.1.

Search_Pre_TCC4.2:

$$\frac{\begin{array}{l} \{-1\} \quad \text{pm}'\text{states}(s') \\ \{-2\} \quad \text{plain_memory?}(\text{pm}) \end{array}}{\begin{array}{l} \{1\} \quad (\text{pointer?} \subseteq \text{interpreted?}) \\ \{2\} \quad \text{pointer?}(\text{cv_base}(\text{pointer}(\text{uint}))) \end{array}}$$

Keeping (1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of Search_Pre_TCC4.2.

Q.E.D.

C.198.6 Search_Example.Search_Pre_TCC5

Terse proof for Search_Pre_TCC5.

Search_Pre_TCC5:

```

{1}  ∀ (s: State):
      blocks_disjoint?(current, size_of(pointer(uint)), last, size_of(pointer(uint))) ∧
      blocks_disjoint?(last, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧
      blocks_disjoint?(current, size_of(pointer(uint)), first, size_of(pointer(uint))) ∧
      blocks_disjoint?(first, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), current, pm'rw_addr) ∧
      valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(last)(s) ∧
      valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(first)(s) ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), last,
                        (pm'ro_addr ∪ pm'rw_addr))
      ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), first,
                        (pm'ro_addr ∪ pm'rw_addr))
      ∧ pm'states(s) ∧ plain_memory?(pm)
    ⊃
    OK?[State, ((range_pointer(cv_base(pointer(uint)))))]
      (read_data[State, ((range_pointer(cv_base(pointer(uint)))))]
        (pm[State], dt_cv_pointer(pointer(uint)))(first)(s))

```

Repeatedly Skolemizing and flattening,
 Rewriting using plain_memory_read_data_ok, matching in *,
 This completes the proof of Search_Pre_TCC5.
 Q.E.D.

C.198.7 Search_Example.Search_Pre_TCC6

Terse proof for Search_Pre_TCC6.

Search_Pre_TCC6:

```

{1}  ∀ (s: State):
      blocks_disjoint?(current, size_of(pointer(uint)), last, size_of(pointer(uint))) ∧
      blocks_disjoint?(last, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧
      blocks_disjoint?(current, size_of(pointer(uint)), first, size_of(pointer(uint))) ∧
      blocks_disjoint?(first, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), current, pm'rw_addr) ∧
      valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(last)(s) ∧
      valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(first)(s) ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), last,
                        (pm'ro_addr ∪ pm'rw_addr))
      ∧
      in_blessed_memory?(dt_cv_pointer(pointer(uint)), first,
                        (pm'ro_addr ∪ pm'rw_addr))
      ∧ pm'states(s) ∧ plain_memory?(pm)
    ⊃
    (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))):
      first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃
      OK?[State, ((range_pointer(cv_base(pointer(uint)))))]
        (read_data[State, ((range_pointer(cv_base(pointer(uint)))))]
          (pm[State], dt_cv_pointer(pointer(uint)))(last)(s))

```

Repeatedly Skolemizing and flattening,

Rewriting using plain_memory_read_data_ok, matching in *,

This completes the proof of Search_Pre_TCC6.

Q.E.D.

C.198.8 Search_Example.Search_Pre_TCC7

Terse proof for Search_Pre_TCC7.

Search_Pre_TCC7:

<pre> {1} ∀ (s: State): blocks_disjoint?(current, size_of(pointer(uint)), last, size_of(pointer(uint))) ∧ blocks_disjoint?(last, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧ blocks_disjoint?(current, size_of(pointer(uint)), first, size_of(pointer(uint))) ∧ blocks_disjoint?(first, size_of(pointer(uint)), current, size_of(pointer(uint))) ∧ in_blessed_memory?(dt_cv_pointer(pointer(uint)), current, pm'rw_addr) ∧ valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(last)(s) ∧ valid_in_mem(pm, dt_cv_pointer(pointer(uint)))(first)(s) ∧ in_blessed_memory?(dt_cv_pointer(pointer(uint)), last, (pm'ro_addr ∪ pm'rw_addr)) ∧ in_blessed_memory?(dt_cv_pointer(pointer(uint)), first, (pm'ro_addr ∪ pm'rw_addr)) ∧ pm'states(s) ∧ plain_memory?(pm) ⊃ (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))): first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃ (∀ (last_value: ((range_pointer(cv_base(pointer(uint)))))): not_null?(pointer(uint))(last_value) ∧ not_null?(pointer(uint))(first_value) ∧ last_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(last)(s)) ⊃ (∀ (i: below[N]): Cpp_Type?(uint)))) </pre>

Repeatedly Skolemizing and flattening,

Using lemma Search_Pre_TCC1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of Search_Pre_TCC7.

Q.E.D.

C.198.9 Search_Example.Search_Pre_TCC8

Terse proof for Search_Pre_TCC8.

Search_Pre_TCC8:

$$\begin{aligned}
 & \{1\} \quad \forall (s: \text{State}): \\
 & \quad \text{blocks_disjoint?}(\text{current}, \text{size_of}(\text{pointer}(\text{uint})), \text{last}, \text{size_of}(\text{pointer}(\text{uint}))) \wedge \\
 & \quad \text{blocks_disjoint?}(\text{last}, \text{size_of}(\text{pointer}(\text{uint})), \text{current}, \text{size_of}(\text{pointer}(\text{uint}))) \wedge \\
 & \quad \text{blocks_disjoint?}(\text{current}, \text{size_of}(\text{pointer}(\text{uint})), \text{first}, \text{size_of}(\text{pointer}(\text{uint}))) \wedge \\
 & \quad \text{blocks_disjoint?}(\text{first}, \text{size_of}(\text{pointer}(\text{uint})), \text{current}, \text{size_of}(\text{pointer}(\text{uint}))) \wedge \\
 & \quad \text{in_blessed_memory?}(\text{dt_cv_pointer}(\text{pointer}(\text{uint})), \text{current}, \text{pm}'\text{rw_addr}) \wedge \\
 & \quad \text{valid_in_mem}(\text{pm}, \text{dt_cv_pointer}(\text{pointer}(\text{uint}))) (\text{last})(s) \wedge \\
 & \quad \text{valid_in_mem}(\text{pm}, \text{dt_cv_pointer}(\text{pointer}(\text{uint}))) (\text{first})(s) \wedge \\
 & \quad \text{in_blessed_memory?}(\text{dt_cv_pointer}(\text{pointer}(\text{uint})), \text{last}, \\
 & \quad \quad (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \\
 & \quad \wedge \\
 & \quad \text{in_blessed_memory?}(\text{dt_cv_pointer}(\text{pointer}(\text{uint})), \text{first}, \\
 & \quad \quad (\text{pm}'\text{ro_addr} \cup \text{pm}'\text{rw_addr})) \\
 & \quad \wedge \text{pm}'\text{states}(s) \wedge \text{plain_memory?}(\text{pm}) \\
 & \quad \supset \\
 & \quad (\forall (\text{first_value}: ((\text{range_pointer}(\text{cv_base}(\text{pointer}(\text{uint})))))): \\
 & \quad \quad \text{first_value} = \text{data}(\text{read_data}(\text{pm}, \text{dt_cv_pointer}(\text{pointer}(\text{uint}))) (\text{first})(s)) \supset \\
 & \quad \quad (\forall (\text{last_value}: ((\text{range_pointer}(\text{cv_base}(\text{pointer}(\text{uint})))))): \\
 & \quad \quad \quad \text{not_null?}(\text{pointer}(\text{uint})) (\text{last_value}) \wedge \\
 & \quad \quad \quad \text{not_null?}(\text{pointer}(\text{uint})) (\text{first_value}) \wedge \\
 & \quad \quad \quad \text{last_value} = \text{data}(\text{read_data}(\text{pm}, \text{dt_cv_pointer}(\text{pointer}(\text{uint}))) (\text{last})(s)) \\
 & \quad \quad \quad \supset \\
 & \quad \quad (\forall (i: \text{below}[N]): \\
 & \quad \quad \quad \text{up?}[\text{Memory_Address}] \\
 & \quad \quad \quad \quad (\text{address_of}(\text{pointer}(\text{uint})) \\
 & \quad \quad \quad \quad \quad (\text{add}(\text{pointer}(\text{uint})) \\
 & \quad \quad \quad \quad \quad \quad (\text{first_value}, i \times \text{size_of}(\text{uint}))))))
 \end{aligned}$$

Repeatedly Skolemizing and flattening,

Rewriting using `address_of_spec`, matching in `*`,

Keeping (-17 1) and hiding `*`,

Using lemma `add_spec`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `Search_Pre_TCC8`.

Q.E.D.

C.198.10 Search_Example.Search_Pre_TCC9

Terse proof for `Search_Pre_TCC9`.

Search_Pre_TCC9:

```

{1}  ∀ (s: State):
    blocks_disjoint?(current, size_of(pointer(uint)), last, size_of(pointer(uint))) ∧

```

C Proof scripts

Repeatedly Skolemizing and flattening,

Using lemma `Search_Pre_TCC1`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `Search_Pre_TCC9`.

Q.E.D.

C.198.11 `Search_Example.search_TCC1`

Terse proof for `search_TCC1`.

`search_TCC1`:

$$\frac{}{\{1\} \text{ Cpp_Type?}(pointer(uint)) \wedge cv(pointer?)(pointer(uint))}$$

Applying propositional simplification,

we get 2 subgoals:

`search_TCC1.1`:

$$\frac{}{\{1\} \text{ Cpp_Type?}(pointer(uint))}$$

Expanding the definition of `Cpp_Type?`,

Repeatedly Skolemizing and flattening,

Expanding the definition of subterm,

Expanding the definition of subterm,

Installing automatic rewrites from: `no_pointers_to_bitfield?` `no_pointers_to_references?`
`no_cv_references?` `no_reference_to_reference?` `no_reference_to_bitfields?` `no_pointer_to_member_to_reference?`
`no_pointer_to_member_to_cv_void?` `no_cv_void_parameter?` `no_array_of_references?` `no_array_of_cv_void?`
`no_array_of_function?` `no_array_of_abstract_class?` `no_pointer_or_ref_to_incomplete_array_parameter?`
`no_array_return_type?` `no_function_return_type?` `bitfield_underlying_integral_or_enum_type?` `cv_array?`
`enum_underlying_integral?` `enum_constants?` `const_volatile?` `const_stutter?` `volatile_stutter?`
`no_cv_class?` `no_cv_union?` `no_cv_function?` `no_reference_to_void?` `no_cv_void?` `no_array_of_bitfields?`

Splitting conjunctions,

we get 2 subgoals:

search_TCC1.1.1.1:

{-1}	$t' = \text{pointer}(\text{uint})$
{1}	$\begin{aligned} & \text{no_pointers_to_bitfield?}(t') \wedge \\ & \text{no_pointers_to_references?}(t') \wedge \\ & \text{no_cv_references?}(t') \wedge \\ & \text{no_reference_to_reference?}(t') \wedge \\ & \text{no_reference_to_bitfields?}(t') \wedge \\ & \text{no_pointer_to_member_to_reference?}(t') \wedge \\ & \text{no_pointer_to_member_to_cv_void?}(t') \wedge \\ & \text{no_cv_void_parameter?}(t') \wedge \\ & \text{no_array_of_references?}(t') \wedge \\ & \text{no_array_of_cv_void?}(t') \wedge \\ & \text{no_array_of_function?}(t') \wedge \\ & \text{no_array_of_abstract_class?}(t') \wedge \\ & \text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge \\ & \text{no_array_return_type?}(t') \wedge \\ & \text{no_function_return_type?}(t') \wedge \\ & \text{bitfield_underlying_integral_or_enum_type?}(t') \wedge \\ & \text{cv_array?}(t') \wedge \\ & \text{enum_underlying_integral?}(t') \wedge \\ & \text{enum_constants?}(t') \wedge \\ & \text{const_volatile?}(t') \wedge \\ & \text{const_stutter?}(t') \wedge \\ & \text{volatile_stutter?}(t') \wedge \\ & \text{no_cv_class?}(t') \wedge \\ & \text{no_cv_union?}(t') \wedge \\ & \text{no_cv_function?}(t') \wedge \\ & \text{no_reference_to_void?}(t') \wedge \\ & \text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t') \end{aligned}$

Replacing using formula -1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Keeping (-2) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of search_TCC1.1.1.1.

search_TCC1.1.2:

{-1}	$t' = \text{uint}$
{1}	$\text{no_pointers_to_bitfield?}(t') \wedge$ $\text{no_pointers_to_references?}(t') \wedge$ $\text{no_cv_references?}(t') \wedge$ $\text{no_reference_to_reference?}(t') \wedge$ $\text{no_reference_to_bitfields?}(t') \wedge$ $\text{no_pointer_to_member_to_reference?}(t') \wedge$ $\text{no_pointer_to_member_to_cv_void?}(t') \wedge$ $\text{no_cv_void_parameter?}(t') \wedge$ $\text{no_array_of_references?}(t') \wedge$ $\text{no_array_of_cv_void?}(t') \wedge$ $\text{no_array_of_function?}(t') \wedge$ $\text{no_array_of_abstract_class?}(t') \wedge$ $\text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge$ $\text{no_array_return_type?}(t') \wedge$ $\text{no_function_return_type?}(t') \wedge$ $\text{bitfield_underlying_integral_or_enum_type?}(t') \wedge$ $\text{cv_array?}(t') \wedge$ $\text{enum_underlying_integral?}(t') \wedge$ $\text{enum_constants?}(t') \wedge$ $\text{const_volatile?}(t') \wedge$ $\text{const_stutter?}(t') \wedge$ $\text{volatile_stutter?}(t') \wedge$ $\text{no_cv_class?}(t') \wedge$ $\text{no_cv_union?}(t') \wedge$ $\text{no_cv_function?}(t') \wedge$ $\text{no_reference_to_void?}(t') \wedge$ $\text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t')$

Replacing using formula -1,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of search_TCC1.1.2.

search_TCC1.2:

{1}	$\text{cv}(\text{pointer?})(\text{pointer}(\text{uint}))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of search_TCC1.2.
 Q.E.D.

C.198.12 Search_Example.search_TCC2

Terse proof for search_TCC2.

search_TCC2:

{1}	$\text{Cpp_Type?}(\text{pointer}(\text{uint}))$
-----	--

Using lemma search_TCC1,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of search_TCC2.
 Q.E.D.

C.198.13 Search_Example.search_TCC3

Terse proof for `search_TCC3`.

`search_TCC3`:

{1} `pointer?(cv_base(pointer(uint)))`

Rewriting using `cv_base_result`, matching in `*`,
we get 2 subgoals:

`search_TCC3.1`:

{1} `cv(pointer?)(pointer(uint))`
{2} `pointer?(cv_base(pointer(uint)))`

Using lemma `search_TCC1`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `search_TCC3.1`.

`search_TCC3.2`:

{1} `(pointer? \subseteq interpreted?)`
{2} `pointer?(cv_base(pointer(uint)))`

Hiding formulas: 2,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `search_TCC3.2`.

Q.E.D.

C.198.14 Search_Example.search_TCC4

Terse proof for `search_TCC4`.

`search_TCC4`:

{1} `Cpp_Type?(pointer(uint)) \wedge v(pointer?)(pointer(uint))`

Applying propositional simplification,

we get 2 subgoals:

`search_TCC4.1`:

{1} `Cpp_Type?(pointer(uint))`

Installing automatic rewrites from: `no_pointers_to_bitfield?` `no_pointers_to_references?`
`no_cv_references?` `no_reference_to_reference?` `no_reference_to_bitfields?` `no_pointer_to_member_to_reference?`

`no_cv_class?` `no_cv_union?` `no_cv_function?` `no_reference_to_void?` `no_cv_void?` `no_array_of_bitfields?`

Expanding the definition of `Cpp_Type?`,

Repeatedly Skolemizing and flattening,

Expanding the definition of subterm,

Expanding the definition of subterm,

Splitting conjunctions,

C Proof scripts

we get 2 subgoals:

search_TCC4.1.1:

{-1}	$t' = \text{pointer}(\text{uint})$
{1}	$\text{no_pointers_to_bitfield?}(t') \wedge$ $\text{no_pointers_to_references?}(t') \wedge$ $\text{no_cv_references?}(t') \wedge$ $\text{no_reference_to_reference?}(t') \wedge$ $\text{no_reference_to_bitfields?}(t') \wedge$ $\text{no_pointer_to_member_to_reference?}(t') \wedge$ $\text{no_pointer_to_member_to_cv_void?}(t') \wedge$ $\text{no_cv_void_parameter?}(t') \wedge$ $\text{no_array_of_references?}(t') \wedge$ $\text{no_array_of_cv_void?}(t') \wedge$ $\text{no_array_of_function?}(t') \wedge$ $\text{no_array_of_abstract_class?}(t') \wedge$ $\text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge$ $\text{no_array_return_type?}(t') \wedge$ $\text{no_function_return_type?}(t') \wedge$ $\text{bitfield_underlying_integral_or_enum_type?}(t') \wedge$ $\text{cv_array?}(t') \wedge$ $\text{enum_underlying_integral?}(t') \wedge$ $\text{enum_constants?}(t') \wedge$ $\text{const_volatile?}(t') \wedge$ $\text{const_stutter?}(t') \wedge$ $\text{volatile_stutter?}(t') \wedge$ $\text{no_cv_class?}(t') \wedge$ $\text{no_cv_union?}(t') \wedge$ $\text{no_cv_function?}(t') \wedge$ $\text{no_reference_to_void?}(t') \wedge$ $\text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t')$

Replacing using formula -1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of search_TCC4.1.1.

search_TCC4.1.2:

{-1}	$t' = \text{uint}$
{1}	$\text{no_pointers_to_bitfield?}(t') \wedge$ $\text{no_pointers_to_references?}(t') \wedge$ $\text{no_cv_references?}(t') \wedge$ $\text{no_reference_to_reference?}(t') \wedge$ $\text{no_reference_to_bitfields?}(t') \wedge$ $\text{no_pointer_to_member_to_reference?}(t') \wedge$ $\text{no_pointer_to_member_to_cv_void?}(t') \wedge$ $\text{no_cv_void_parameter?}(t') \wedge$ $\text{no_array_of_references?}(t') \wedge$ $\text{no_array_of_cv_void?}(t') \wedge$ $\text{no_array_of_function?}(t') \wedge$ $\text{no_array_of_abstract_class?}(t') \wedge$ $\text{no_pointer_or_ref_to_incomplete_array_parameter?}(t') \wedge$ $\text{no_array_return_type?}(t') \wedge$ $\text{no_function_return_type?}(t') \wedge$ $\text{bitfield_underlying_integral_or_enum_type?}(t') \wedge$ $\text{cv_array?}(t') \wedge$ $\text{enum_underlying_integral?}(t') \wedge$ $\text{enum_constants?}(t') \wedge$ $\text{const_volatile?}(t') \wedge$ $\text{const_stutter?}(t') \wedge$ $\text{volatile_stutter?}(t') \wedge$ $\text{no_cv_class?}(t') \wedge$ $\text{no_cv_union?}(t') \wedge$ $\text{no_cv_function?}(t') \wedge$ $\text{no_reference_to_void?}(t') \wedge$ $\text{no_cv_void?}(t') \wedge \text{no_array_of_bitfields?}(t')$

Replacing using formula -1,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of search_TCC4.1.2.

search_TCC4.2:

{1}	$v(\text{pointer?})(\text{pointer}(\text{uint}))$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of search_TCC4.2.

Q.E.D.

C.198.15 Search_Example.deref_current_TCC1

Terse proof for deref_current_TCC1.

deref_current_TCC1:

{1}	$\forall (s: \text{State}):$ $\text{read_current}(s) \supset$ $\text{OK?}[\text{State}, ((\text{range_pointer}(\text{cv_base}(\text{pointer}(\text{uint})))))]$ $(\text{read_data}[\text{State}, ((\text{range_pointer}(\text{cv_base}(\text{pointer}(\text{uint}))))])$ $(\text{pm}[\text{State}], \text{dt_cv_pointer}(\text{pointer}(\text{uint})))(\text{current})(s)$
-----	--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `deref_current_TCC1`.
 Q.E.D.

C.198.16 Search_Example.deref_current_TCC2

Terse proof for `deref_current_TCC2`.

`deref_current_TCC2`:

```
{1}  ∀ (s: State):
      read_current(s) ⊃
      (∀ (current_value: ((range_pointer(cv_base(pointer(uint)))))):
        not_null?(pointer(uint))(current_value) ∧
        current_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(current)(s))
        ⊃ up?[Memory_Address](address_of(pointer(uint))(current_value)))
```

Repeatedly Skolemizing and flattening,
 Rewriting using `address_of_spec`, matching in `*`,
 This completes the proof of `deref_current_TCC2`.
 Q.E.D.

C.198.17 Search_Example.read_array_TCC1

Terse proof for `read_array_TCC1`.

`read_array_TCC1`:

```
{1}  ∀ (s: State):
      read_first(s) ⊃
      OK?[State, ((range_pointer(cv_base(pointer(uint)))))]
      (read_data[State, ((range_pointer(cv_base(pointer(uint)))))]
       (pm[State], dt_cv_pointer(pointer(uint)))(first)(s))
```

Repeatedly Skolemizing and flattening,
 Expanding the definition of `read_first`,
 which is trivially true.
 This completes the proof of `read_array_TCC1`.
 Q.E.D.

C.198.18 Search_Example.read_array_TCC2

Terse proof for `read_array_TCC2`.

`read_array_TCC2`:

```
{1}  ∀ (s: State):
      read_first(s) ⊃
      (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))):
        not_null?(pointer(uint))(first_value) ∧
        first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s))
        ⊃ (∀ (i: below[N]): Cpp_Type?(uint)))
```

Repeatedly Skolemizing and flattening,

Using lemma Search_Pre_TCC1,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of read_array_TCC2.
 Q.E.D.

C.198.19 Search_Example.read_array_TCC3

Terse proof for read_array_TCC3.

read_array_TCC3:

<pre> {1} ∀ (s: State): read_first(s) ⊃ (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))): not_null?(pointer(uint))(first_value) ∧ first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃ (∀ (i: below[N]): up?[Memory_Address] (address_of(pointer(uint)) (add(pointer(uint)) (first_value, i × size_of(uint)))))) </pre>
--

Repeatedly Skolemizing and flattening,
 Rewriting using address_of_spec, matching in *,
 Using lemma add_spec,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of read_array_TCC3.
 Q.E.D.

C.198.20 Search_Example.not_found_TCC1

Terse proof for not_found_TCC1.

not_found_TCC1:

<pre> {1} ∀ (s: State): read_array(s) ∧ read_last(s) ∧ read_current(s) ∧ read_first(s) ⊃ (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))): first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃ (∀ (i: below[N]): Cpp_Type?(uint))) </pre>

Repeatedly Skolemizing and flattening,
 Using lemma Search_Pre_TCC1,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of not_found_TCC1.
 Q.E.D.

C.198.21 Search_Example.not_found_TCC2

Terse proof for not_found_TCC2.

not_found_TCC2:

```
{1}  ∀ (s: State):
      read_array(s) ∧ read_last(s) ∧ read_current(s) ∧ read_first(s) ⊃
      (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))):
        first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃
        (∀ (i: below[N]):
          up?[Memory_Address]
            (address_of(pointer(uint))
              (add(pointer(uint))
                (first_value, i × size_of(uint)))))))
```

Repeatedly Skolemizing and flattening,
 Rewriting using address_of_spec, matching in *,
 Using lemma add_spec,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Expanding the definition of read_array,
 which is trivially true.
 This completes the proof of not_found_TCC2.
 Q.E.D.

C.198.22 Search_Example.not_found_TCC3

Terse proof for not_found_TCC3.

not_found_TCC3:

```
{1}  ∀ (s: State):
      read_array(s) ∧ read_last(s) ∧ read_current(s) ∧ read_first(s) ⊃
      (∀ (first_value: ((range_pointer(cv_base(pointer(uint)))))):
        first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s)) ⊃
        (∀ (i: below[N]):
          OK?[State, ((range(uint)))]
            (read_data[State, ((range(uint)))]
              (pm[State], dt(uint))
                (down[Memory_Address]
                  (address_of(pointer(uint))
                    (add(pointer(uint))
                      (first_value, i × size_of(uint)))))))
            (s))))
```

Repeatedly Skolemizing and flattening,
 Expanding the definition of read_array,
 Replacing using formula -7,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Instantiating quantified variables,
 This completes the proof of not_found_TCC3.
 Q.E.D.

C.198.23 Search_Example.not_found_TCC4

Terse proof for not_found_TCC4.

not_found_TCC4:

```

{1}  ∀ (s: State):
      read_first(s) ∧
      read_current(s) ∧
      read_last(s) ∧
      read_array(s) ∧
      (LET first_value = data(read_data(pm, dt_cv_pointer(pointer(uint)))(first)(s))
        IN
        ∀ (i: below[N]):
          (data(read_data(pm, dt(uint))
                    (down(address_of(pointer(uint))
                          (add(pointer(uint))
                              (first_value,
                                i × size_of(uint))))))
            (s))
            ≠ value))
      ⊃
      OK?[State, ((range_pointer(cv_base(pointer(uint)))))]
        (read_data[State, ((range_pointer(cv_base(pointer(uint)))))]
          (pm[State], dt_cv_pointer(pointer(uint)))(last)(s))

```

Repeatedly Skolemizing and flattening,
 Expanding the definition of read_last,
 which is trivially true.
 This completes the proof of not_found_TCC4.
 Q.E.D.

C.198.24 Search_Example.found_TCC1

Terse proof for found_TCC1.

found_TCC1:

```

{1}  ∀ (s: State):
      deref_current(s) ∧
      read_array(s) ∧ read_last(s) ∧ read_current(s) ∧ read_first(s)
      ⊃
      OK?[State, ((range_pointer(cv_base(pointer(uint)))))]
        (read_data[State, ((range_pointer(cv_base(pointer(uint)))))]
          (pm[State], dt_cv_pointer(pointer(uint)))(last)(s))

```

Repeatedly Skolemizing and flattening,
 Expanding the definition of read_last,
 which is trivially true.
 This completes the proof of found_TCC1.
 Q.E.D.

C.198.25 Search_Example.found_TCC2

Terse proof for found_TCC2.

found_TCC2:

<pre> {1} ∀ (s: State): read_first(s) ∧ read_current(s) ∧ read_last(s) ∧ read_array(s) ∧ deref_current(s) ∧ data(read_data(pm, dt_cv_pointer(pointer(uint)))(last)(s)) ≠ data(read_data(pm, dt_cv_pointer(pointer(uint)))(current)(s)) ⊃ up?[Memory_Address] (address_of(pointer(uint)) (data[State, ((range_pointer(cv_base(pointer(uint))))]) (read_data[State, ((range_pointer(cv_base(pointer(uint))))]) (pm[State], dt_cv_pointer(pointer(uint)))(current) (s))))) </pre>

Repeatedly Skolemizing and flattening,

Expanding the definition of deref_current,

Applying disjunctive simplification to flatten sequent,

Rewriting using address_of_spec, matching in *,

Expanding the definition of cv_base,

which is trivially true.

This completes the proof of found_TCC2.

Q.E.D.

C.198.26 Search_Example.found_TCC3

Terse proof for found_TCC3.

found_TCC3:

<pre> {1} ∀ (s: State): read_first(s) ∧ read_current(s) ∧ read_last(s) ∧ read_array(s) ∧ deref_current(s) ∧ data(read_data(pm, dt_cv_pointer(pointer(uint)))(last)(s)) ≠ data(read_data(pm, dt_cv_pointer(pointer(uint)))(current)(s)) ⊃ OK?[State, ((range(uint)))] (read_data[State, ((range(uint)))] (pm[State], dt(uint)) (down[Memory_Address] (address_of(pointer(uint)) (data[State, ((range_pointer(cv_base(pointer(uint))))]) (read_data [State, ((range_pointer(cv_base(pointer(uint))))]) (pm[State], dt_cv_pointer(pointer(uint)) (current)(s)))))) (s)) </pre>
--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of found_TCC3.
 Q.E.D.

C.198.27 Search_Example.uchar_range_values_TCC1

Terse proof for uchar_range_values_TCC1.

uchar_range_values_TCC1:

<pre> {1} ∀ (n: nat): n ≤ 255 ⊃ Cpp_Type?(uchar) ∧ cv(non_bool_integral_enum?)(uchar) </pre>

Repeatedly Skolemizing and flattening,
 Applying propositional simplification,
 we get 2 subgoals:

uchar_range_values_TCC1.1:

<pre> {-1} n' ≥ 0 {-2} n' ≤ 255 {1} Cpp_Type?(uchar) </pre>

Expanding the definition of Cpp_Type?,
 Repeatedly Skolemizing and flattening,
 Expanding the definition of subterm,
 Replacing using formula -1,

Installing automatic rewrites from: no_pointers_to_bitfield? no_pointers_to_references?
 no_cv_references? no_reference_to_reference? no_reference_to_bitfields? no_pointer_to_member_to_reference?
 no_pointer_to_member_to_cv_void? no_cv_void_parameter? no_array_of_references? no_array_of_cv_void?
 no_array_of_function? no_array_of_abstract_class? no_pointer_or_ref_to_incomplete_array_parameter?
 no_array_return_type? no_function_return_type? bitfield_underlying_integral_or_enum_type? cv_array?

enum_underlying_integral? enum_constants? const_volatile? const_stutter? volatile_stutter?
no_cv_class? no_cv_union? no_cv_function? no_reference_to_void? no_cv_void? no_array_of_bitfields?

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of uchar_range_values_TCC1.1.

uchar_range_values_TCC1.2:

{-1}	$n' \geq 0$
{-2}	$n' \leq 255$
{1}	$cv(\text{non_bool_integral_enum?})(\text{uchar})$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of uchar_range_values_TCC1.2.
Q.E.D.

C.198.28 Search_Example.uchar_range_values

Terse proof for uchar_range_values.

uchar_range_values:

{1}	$\forall (n: \text{nat}): n \leq 255 \supset \text{range}(\text{uchar})(n)$
-----	---

Repeatedly Skolemizing and flattening,
Expanding the definition of range,
Expanding the definition of range_integral,
Expanding the definition of extend,
Using lemma binary_range_uchar,
Using lemma max_uchar,
Using lemma min_max_value_bits_uchar,
Trying repeated skolemization, instantiation, and if-lifting,
Using lemma expt_ge1,
Expanding the definition of ^,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of uchar_range_values.
Q.E.D.

C.198.29 Search_Example.search_terminates

Installing automatic rewrites from: cv_base_result2 cv_base_result_c cv_base_result_v
 cv_base_result_cv cv c v

Installing automatic rewrites from: uchar_range_values

Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier in-
 stantiation, skolemization, if-lifting and equality replacement,

This completes the proof of `search_found`.

Q.E.D.

C.199 Proofs for Segment_Reg_Datatype (paging-data.pvs)

C.199.1 Segment_Reg_Datatype.segment_selector_data_type_TCC1

Terse proof for `segment_selector_data_type_TCC1`.

`segment_selector_data_type_TCC1`:

{1} $\exists (x: (\text{pod_data_type?}[\text{Segment_Selector_type}])): \text{TRUE}$

Rewriting using `segment_selector_type_exists`, matching in *,
 This completes the proof of `segment_selector_data_type_TCC1`.

Q.E.D.

C.199.2 Segment_Reg_Datatype.segment_reg_data_type_TCC1

Terse proof for `segment_reg_data_type_TCC1`.

`segment_reg_data_type_TCC1`:

{1} $\exists (x: (\text{pod_data_type?}[\text{Segment_Reg_type}])): \text{TRUE}$

Using lemma `segment_reg_data_type_exists`,
This completes the proof of `segment_reg_data_type_TCC1`.
Q.E.D.

C.200 Proofs for Segment_Types (paging-data.pvs)

This theory contains no provable formal statements.

C.201 Proofs for SelectionStatements (statements.pvs)

This theory contains no provable formal statements.

C.202 Proofs for Set_Lift (vfiasco-prelude.pvs)

This theory contains no provable formal statements.

C.203 Proofs for Single_Statement_Rewrites0 (statement-rewrites.pvs)

C.203.1 Single_Statement_Rewrites0.break_catch_break

Terse proof for `break_catch_break`.

`break_catch_break`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{OK}?(s) \supset (\text{stmt} \## \text{break} \## \text{catch_break})(s) = \text{stmt}(s)}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
This completes the proof of `break_catch_break`.
Q.E.D.

C.203.2 Single_Statement_Rewrites0.break_break_stmt

Terse proof for `break_break_stmt`.

`break_break_stmt`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{Break}?(s) \supset (\text{stmt} \## \text{stmt1} \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `break_break_stmt`.
Q.E.D.

C.203.3 Single_Statement_Rewrites0.break_break_catch_continue

Terse proof for `break_break_catch_continue`.

`break_break_catch_continue`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Break?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{catch_continue} \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)$$

,
This completes the proof of `break_break_catch_continue`.

Q.E.D.

C.203.4 Single_Statement_Rewrites0.break_break_catch_default

Terse proof for `break_break_catch_default`.

`break_break_catch_default`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Break?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{catch_default} \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)$$

,
This completes the proof of `break_break_catch_default`.

Q.E.D.

C.203.5 Single_Statement_Rewrites0.break_break_lift_stmt

Terse proof for `break_break_lift_stmt`.

`break_break_lift_stmt`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Break?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{lift}(\text{stmt1}) \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)$$

,
This completes the proof of `break_break_lift_stmt`.

Q.E.D.

C.203.6 Single_Statement_Rewrites0.break_break_case

Terse proof for `break_break_case`.

`break_break_case`:

$$\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Break?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{case}(n) \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)$$

,
This completes the proof of `break_break_case`.

Q.E.D.

C.203.7 Single_Statement_Rewrites0.break_break_default

Terse proof for break_break_default.

break_break_default:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset (\text{stmt} \## \text{default} \## \text{catch_break})(s) = (\text{stmt} \## \text{catch_break})(s)}{}$$

This completes the proof of break_break_default.

Q.E.D.

C.203.8 Single_Statement_Rewrites0.break_break

Terse proof for break_break.

break_break:

$$\frac{\{1\} \quad \forall (s: \text{State}): \text{Break?}(\text{break}(s))}{}$$

This completes the proof of break_break.

Q.E.D.

C.203.9 Single_Statement_Rewrites0.stmt_break_break

Terse proof for stmt_break_break.

stmt_break_break:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{OK?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \## \text{break})(s))}{}$$

This completes the proof of stmt_break_break.

Q.E.D.

C.203.10 Single_Statement_Rewrites0.break_stmt_break

Terse proof for break_stmt_break.

break_stmt_break:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \## \text{stmt1})(s))}{}$$

This completes the proof of break_stmt_break.

Q.E.D.

C.203.11 Single_Statement_Rewrites0.break_stmt_catch_continue

Terse proof for break_stmt_catch_continue.

break_stmt_catch_continue:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \## \text{catch_continue})(s))}{}$$

,
This completes the proof of `break_stmt_catch_continue`.
Q.E.D.

C.203.12 Single_Statement_Rewrites0.break_stmt_catch_default

Terse proof for `break_stmt_catch_default`.

`break_stmt_catch_default`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \ \#\# \ \text{catch_default})(s))}{}$$

,
This completes the proof of `break_stmt_catch_default`.
Q.E.D.

C.203.13 Single_Statement_Rewrites0.break_stmt_lift

Terse proof for `break_stmt_lift`.

`break_stmt_lift`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \ \#\# \ \text{lift}(\text{stmt1}))(s))}{}$$

,
This completes the proof of `break_stmt_lift`.
Q.E.D.

C.203.14 Single_Statement_Rewrites0.break_stmt_case

Terse proof for `break_stmt_case`.

`break_stmt_case`:

$$\frac{\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \ \#\# \ \text{case}(n))(s))}{}$$

,
This completes the proof of `break_stmt_case`.
Q.E.D.

C.203.15 Single_Statement_Rewrites0.break_stmt_default

Terse proof for `break_stmt_default`.

`break_stmt_default`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{Break?}(\text{stmt}(s)) \supset \text{Break?}((\text{stmt} \ \#\# \ \text{default})(s))}{}$$

,
This completes the proof of `break_stmt_default`.
Q.E.D.

C.203.16 Single_Statement_Rewrites0.continue_catch_continue

Terse proof for continue_catch_continue.

continue_catch_continue:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \## \text{continue} \## \text{catch_continue})(s) = \text{stmt}(s)$$

Repeatedly Skolemizing and flattening,
 Trying repeated skolemization, instantiation, and if-lifting,
 Applying extensionality,
 This completes the proof of continue_catch_continue.
 Q.E.D.

C.203.17 Single_Statement_Rewrites0.continue_break_stmt

Terse proof for continue_break_stmt.

continue_break_stmt:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Continue?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{stmt1} \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
 This completes the proof of continue_break_stmt.
 Q.E.D.

C.203.18**Single_Statement_Rewrites0.continue_break_catch_continue**

Terse proof for continue_break_catch_continue.

continue_break_catch_continue:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Continue?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{catch_break} \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
 This completes the proof of continue_break_catch_continue.
 Q.E.D.

C.203.19 Single_Statement_Rewrites0.continue_break_catch_default

Terse proof for continue_break_catch_default.

continue_break_catch_default:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{Continue?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \## \text{catch_default} \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
 This completes the proof of continue_break_catch_default.
 Q.E.D.

C.203.20 Single_Statement_Rewrites0.continue_break_lift_stmt

Terse proof for `continue_break_lift_stmt`.

`continue_break_lift_stmt`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{Continue?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \## \text{lift}(\text{stmt1}) \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
This completes the proof of `continue_break_lift_stmt`.

Q.E.D.

C.203.21 Single_Statement_Rewrites0.continue_break_case

Terse proof for `continue_break_case`.

`continue_break_case`:

$$\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{Continue?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \## \text{case}(n) \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
This completes the proof of `continue_break_case`.

Q.E.D.

C.203.22 Single_Statement_Rewrites0.continue_break_default

Terse proof for `continue_break_default`.

`continue_break_default`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{Continue?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \## \text{default} \## \text{catch_continue})(s) = (\text{stmt} \## \text{catch_continue})(s)$$

,
This completes the proof of `continue_break_default`.

Q.E.D.

C.203.23 Single_Statement_Rewrites0.continue_continue

Terse proof for `continue_continue`.

`continue_continue`:

$$\{1\} \quad \forall (s: \text{State}): \text{Continue?}(\text{continue}(s))$$

,
This completes the proof of `continue_continue`.

Q.E.D.

C.203.24 Single_Statement_Rewrites0.stmt_continue_continue

Terse proof for `stmt_continue_continue`.

stmt_continue_continue:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{OK}?(\text{stmt}(s)) \supset \text{Continue}?((\text{stmt} \## \text{continue})(s))}{}$$

,
This completes the proof of stmt_continue_continue.
Q.E.D.

C.203.25 Single_Statement_Rewrites0.continue_stmt_continue

Terse proof for continue_stmt_continue.

continue_stmt_continue:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue}?(\text{stmt}(s)) \supset \text{Continue}?((\text{stmt} \## \text{stmt1})(s))}{}$$

,
This completes the proof of continue_stmt_continue.
Q.E.D.

C.203.26 Single_Statement_Rewrites0.continue_stmt_catch_break

Terse proof for continue_stmt_catch_break.

continue_stmt_catch_break:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue}?(\text{stmt}(s)) \supset \text{Continue}?((\text{stmt} \## \text{catch_break})(s))}{}$$

,
This completes the proof of continue_stmt_catch_break.
Q.E.D.

C.203.27 Single_Statement_Rewrites0.continue_stmt_catch_default

Terse proof for continue_stmt_catch_default.

continue_stmt_catch_default:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue}?(\text{stmt}(s)) \supset \text{Continue}?((\text{stmt} \## \text{catch_default})(s))}{}$$

,
This completes the proof of continue_stmt_catch_default.
Q.E.D.

C.203.28 Single_Statement_Rewrites0.continue_stmt_lift

Terse proof for continue_stmt_lift.

continue_stmt_lift:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue}?(\text{stmt}(s)) \supset \text{Continue}?((\text{stmt} \## \text{lift}(\text{stmt1}))(s))}{}$$

,

This completes the proof of `continue_stmt_lift`.
Q.E.D.

C.203.29 Single_Statement_Rewrites0.continue_stmt_case

Terse proof for `continue_stmt_case`.

`continue_stmt_case`:

$$\frac{\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{Continue?}(\text{stmt}(s)) \supset \text{Continue?}((\text{stmt} \ \#\# \ \text{case}(n))(s))}$$

This completes the proof of `continue_stmt_case`.
Q.E.D.

C.203.30 Single_Statement_Rewrites0.continue_stmt_default

Terse proof for `continue_stmt_default`.

`continue_stmt_default`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{Continue?}(\text{stmt}(s)) \supset \text{Continue?}((\text{stmt} \ \#\# \ \text{default})(s))}$$

This completes the proof of `continue_stmt_default`.
Q.E.D.

C.203.31 Single_Statement_Rewrites0.switch_stmt

Terse proof for `switch_stmt`.

`switch_stmt`:

$$\frac{\{1\} \quad \forall (n: \text{int}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{switch_result}(n) \ \#\# \ \text{stmt} = \text{switch_result}(n)}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
This completes the proof of `switch_stmt`.
Q.E.D.

C.203.32 Single_Statement_Rewrites0.stmt_switch_stmt

Terse proof for `stmt_switch_stmt`.

`stmt_switch_stmt`:

$$\frac{\{1\} \quad \forall (n: \text{int}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{stmt} \ \#\# \ \text{switch_result}(n) \ \#\# \ \text{stmt1} = \text{stmt} \ \#\# \ \text{switch_result}(n)}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_switch_stmt`.
Q.E.D.

C.203.33 Single_Statement_Rewrites0.switch_case_taken

Terse proof for `switch_case_taken`.

`switch_case_taken`:

$$\{1\} \quad \forall (n: \text{int}): (\text{switch_result}[\text{State}](n) \#\# \text{case}(n)) = \text{skip}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
This completes the proof of `switch_case_taken`.
Q.E.D.

C.203.34 Single_Statement_Rewrites0.stmt_switch_case_taken

Terse proof for `stmt_switch_case_taken`.

`stmt_switch_case_taken`:

$$\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK}?(\text{stmt}(s)) \supset (\text{stmt} \#\# \text{switch_result}(n) \#\# \text{case}(n))(s) = \text{stmt}(s)$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
This completes the proof of `stmt_switch_case_taken`.
Q.E.D.

C.203.35 Single_Statement_Rewrites0.switch_case_not_taken

Terse proof for `switch_case_not_taken`.

`switch_case_not_taken`:

$$\{1\} \quad \forall (n_1, n_2: \text{int}): n_1 \neq n_2 \supset \text{switch_result}[\text{State}](n_1) \#\# \text{case}(n_2) = \text{switch_result}(n_1)$$

Expanding the definition of `##`,
Expanding the definition of `case`,
Expanding the definition of `switch_result`,
Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `switch_case_not_taken`.
Q.E.D.

C.203.36 Single_Statement_Rewrites0.stmt_switch_case_not_taken

Terse proof for `stmt_switch_case_not_taken`.

C Proof scripts

stmt_switch_case_not_taken:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], n_1, n_2: \text{int}):$$
$$\text{OK?}(\text{stmt}(s)) \wedge n_1 \neq n_2 \supset$$
$$(\text{stmt} \#\# \text{switch_result}(n_1) \#\# \text{case}(n_2))(s) = (\text{stmt} \#\# \text{switch_result}(n_1))(s)$$

,
This completes the proof of `stmt_switch_case_not_taken`.

Q.E.D.

C.203.37 Single_Statement_Rewrites0.switch_default

Terse proof for `switch_default`.

switch_default:

$$\{1\} \quad \forall (n: \text{int}): \text{switch_result}[\text{State}](n) \#\# \text{default} = \text{switch_result}(n)$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `switch_default`.

Q.E.D.

C.203.38 Single_Statement_Rewrites0.stmt_switch_default

Terse proof for `stmt_switch_default`.

stmt_switch_default:

$$\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{OK?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \#\# \text{switch_result}(n) \#\# \text{default})(s) = (\text{stmt} \#\# \text{switch_result}(n))(s)$$

,
This completes the proof of `stmt_switch_default`.

Q.E.D.

C.203.39 Single_Statement_Rewrites0.switch_catch_break

Terse proof for `switch_catch_break`.

switch_catch_break:

$$\{1\} \quad \forall (n: \text{int}): \text{switch_result}[\text{State}](n) \#\# \text{catch_break} = \text{switch_result}(n)$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `switch_catch_break`.

Q.E.D.

C.203.40 Single_Statement_Rewrites0.stmt_switch_catch_break

Terse proof for stmt_switch_catch_break.

stmt_switch_catch_break:

$$\begin{array}{|l} \hline \{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \quad \text{OK?}(\text{stmt}(s)) \supset \\ \quad (\text{stmt} \#\#\ \text{switch_result}(n) \#\#\ \text{catch_break})(s) = (\text{stmt} \#\#\ \text{switch_result}(n))(s) \\ \hline \end{array}$$

,
This completes the proof of stmt_switch_catch_break.

Q.E.D.

C.203.41 Single_Statement_Rewrites0.switch_catch_continue

Terse proof for switch_catch_continue.

switch_catch_continue:

$$\begin{array}{|l} \hline \{1\} \quad \forall (n: \text{int}): \text{switch_result}[\text{State}](n) \#\#\ \text{catch_continue} = \text{switch_result}(n) \\ \hline \end{array}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of switch_catch_continue.

Q.E.D.

C.203.42 Single_Statement_Rewrites0.stmt_switch_catch_continue

Terse proof for stmt_switch_catch_continue.

stmt_switch_catch_continue:

$$\begin{array}{|l} \hline \{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \quad \text{OK?}(\text{stmt}(s)) \supset \\ \quad (\text{stmt} \#\#\ \text{switch_result}(n) \#\#\ \text{catch_continue})(s) = (\text{stmt} \#\#\ \text{switch_result}(n))(s) \\ \hline \end{array}$$

,
This completes the proof of stmt_switch_catch_continue.

Q.E.D.

C.203.43 Single_Statement_Rewrites0.switch_catch_default

Terse proof for switch_catch_default.

switch_catch_default:

$$\begin{array}{|l} \hline \{1\} \quad \forall (n: \text{int}): \text{switch_result}[\text{State}](n) \#\#\ \text{catch_default} = \text{switch_result}(n) \\ \hline \end{array}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of switch_catch_default.

Q.E.D.

C.203.44 Single_Statement_Rewrites0.stmt_switch_catch_default

Terse proof for `stmt_switch_catch_default`.

`stmt_switch_catch_default`:

$$\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{OK?}(\text{stmt}(s)) \supset$$

$$(\text{stmt} \ \#\# \ \text{switch_result}(n) \ \#\# \ \text{catch_default})(s) = (\text{stmt} \ \#\# \ \text{switch_result}(n))(s)$$

This completes the proof of `stmt_switch_catch_default`.

Q.E.D.

C.203.45 Single_Statement_Rewrites0.default_stmt

Terse proof for `default_stmt`.

`default_stmt`:

$$\{1\} \quad \forall (\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{default_result} \ \#\# \ \text{stmt} = \text{default_result}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `default_stmt`.

Q.E.D.

C.203.46 Single_Statement_Rewrites0.stmt_default_stmt

Terse proof for `stmt_default_stmt`.

`stmt_default_stmt`:

$$\{1\} \quad \forall (\text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{stmt} \ \#\# \ \text{default_result} \ \#\# \ \text{stmt1} = \text{stmt} \ \#\# \ \text{default_result}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_default_stmt`.

Q.E.D.

C.203.47 Single_Statement_Rewrites0.default_case

Terse proof for `default_case`.

`default_case`:

$$\{1\} \quad \forall (n: \text{int}): \text{default_result}[\text{State}] \ \#\# \ \text{case}(n) = \text{default_result}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `default_case`.

Q.E.D.

C.203.48 Single_Statement_Rewrites0.stmt_default_case

Terse proof for `stmt_default_case`.

`stmt_default_case`:

$$\frac{\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \#\# \text{default_result} \#\# \text{case}(n))(s) = (\text{stmt} \#\# \text{default_result})(s)}{}$$

This completes the proof of `stmt_default_case`.

Q.E.D.

C.203.49 Single_Statement_Rewrites0.default_default

Terse proof for `default_default`.

`default_default`:

$$\frac{\{1\} \quad \text{default_result}[\text{State}] \#\# \text{default} = \text{skip}}{}$$

Applying `decompose-equality`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `default_default`.

Q.E.D.

C.203.50 Single_Statement_Rewrites0.stmt_default_default

Terse proof for `stmt_default_default`.

`stmt_default_default`:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \#\# \text{default_result} \#\# \text{default})(s) = \text{stmt}(s)}{}$$

Repeatedly Skolemizing and flattening,
Trying repeated skolemization, instantiation, and if-lifting,
Applying extensionality,
This completes the proof of `stmt_default_default`.

Q.E.D.

C.203.51 Single_Statement_Rewrites0.default_catch_break

Terse proof for `default_catch_break`.

`default_catch_break`:

$$\frac{\{1\} \quad \text{default_result}[\text{State}] \#\# \text{catch_break} = \text{default_result}}{}$$

Applying `decompose-equality`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `default_catch_break`.

Q.E.D.

C.203.52 Single_Statement_Rewrites0.stmt_default_catch_break

Terse proof for `stmt_default_catch_break`.

`stmt_default_catch_break`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{OK?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \#\# \text{default_result} \#\# \text{catch_break})(s) = (\text{stmt} \#\# \text{default_result})(s)$$

,
This completes the proof of `stmt_default_catch_break`.
Q.E.D.

C.203.53 Single_Statement_Rewrites0.default_catch_continue

Terse proof for `default_catch_continue`.

`default_catch_continue`:

$$\{1\} \quad \text{default_result}[\text{State}] \#\# \text{catch_continue} = \text{default_result}$$

Applying `decompose-equality`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `default_catch_continue`.
Q.E.D.

C.203.54 Single_Statement_Rewrites0.stmt_default_catch_continue

Terse proof for `stmt_default_catch_continue`.

`stmt_default_catch_continue`:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$
$$\text{OK?}(\text{stmt}(s)) \supset$$
$$(\text{stmt} \#\# \text{default_result} \#\# \text{catch_continue})(s) = (\text{stmt} \#\# \text{default_result})(s)$$

,
This completes the proof of `stmt_default_catch_continue`.
Q.E.D.

C.203.55 Single_Statement_Rewrites0.default_catch_default

Terse proof for `default_catch_default`.

`default_catch_default`:

$$\{1\} \quad \text{default_result}[\text{State}] \#\# \text{catch_default} = \text{skip}$$

Applying `decompose-equality`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `default_catch_default`.
Q.E.D.

C.203.56 Single_Statement_Rewrites0.stmt_default_catch_default

Terse proof for stmt_default_catch_default.

stmt_default_catch_default:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{OK}?(\text{stmt}(s)) \supset (\text{stmt} \text{ ## } \text{default_result} \text{ ## } \text{catch_default})(s) = \text{stmt}(s)}$$

Repeatedly Skolemizing and flattening,
 Trying repeated skolemization, instantiation, and if-lifting,
 Applying extensionality,
 This completes the proof of stmt_default_catch_default.
 Q.E.D.

C.203.57 Single_Statement_Rewrites0.return_void_result

Terse proof for return_void_result.

return_void_result:

$$\frac{}{\{1\} \quad \text{return_void}[\text{State}] = \text{return_result}}$$

This completes the proof of return_void_result.
 Q.E.D.

C.203.58 Single_Statement_Rewrites0.skip_ok

Terse proof for skip_ok.

skip_ok:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \text{OK}?(\text{skip}(s))}$$

This completes the proof of skip_ok.
 Q.E.D.

C.203.59 Single_Statement_Rewrites0.skip_state_TCC1

Terse proof for skip_state_TCC1.

skip_state_TCC1:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \text{OK}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Break}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Continue}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Return}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Switch}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Default}?[\text{State}](\text{skip}[\text{State}](s)) \vee \text{Exception}?[\text{State}](\text{skip}[\text{State}](s))}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of skip_state_TCC1.
 Q.E.D.

C.203.60 Single_Statement_Rewrites0.skip_state

Terse proof for skip_state.

skip_state:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \text{state}(\text{skip}(s)) = s}$$

This completes the proof of skip_state.

Q.E.D.

C.203.61 Single_Statement_Rewrites0.skip_elimination

Terse proof for skip_elimination.

skip_elimination:

$$\frac{}{\{1\} \quad \forall (\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): (\text{stmt} \ \#\# \ \text{skip}) = \text{stmt}}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

Applying extensionality,

This completes the proof of skip_elimination.

Q.E.D.

C.203.62 Single_Statement_Rewrites0.stmt_skip_elimination

Terse proof for stmt_skip_elimination.

stmt_skip_elimination:

$$\frac{}{\{1\} \quad \forall (\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): (\text{skip} \ \#\# \ \text{stmt}) = \text{stmt}}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stmt_skip_elimination.

Q.E.D.

C.203.63 Single_Statement_Rewrites0.stmt_remove_catch_default

Terse proof for stmt_remove_catch_default.

stmt_remove_catch_default:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \text{OK}?(s) \supset (\text{stmt} \ \#\# \ \text{catch_default})(s) = \text{stmt}(s)}$$

This completes the proof of stmt_remove_catch_default.

Q.E.D.

C.203.64 Single_Statement_Rewrites0.stmt_remove_case

Terse proof for stmt_remove_case.

stmt_remove_case:

$$\frac{\{1\} \quad \forall (n: \text{int}, s: \text{State}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{OK?}(\text{stmt1}(s)) \supset (\text{stmt1} \#\# \text{case}(n))(s) = \text{stmt1}(s)}{}$$

This completes the proof of stmt_remove_case.

Q.E.D.

C.203.65 Single_Statement_Rewrites0.stmt_remove_default

Terse proof for stmt_remove_default.

stmt_remove_default:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{OK?}(\text{stmt1}(s)) \supset (\text{stmt1} \#\# \text{default})(s) = \text{stmt1}(s)}{}$$

This completes the proof of stmt_remove_default.

Q.E.D.

C.203.66 Single_Statement_Rewrites0.stmt_remove_catch_continue

Terse proof for stmt_remove_catch_continue.

stmt_remove_catch_continue:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \#\# \text{catch_continue})(s) = \text{stmt}(s)}{}$$

This completes the proof of stmt_remove_catch_continue.

Q.E.D.

C.203.67 Single_Statement_Rewrites0.stmt_remove_catch_break

Terse proof for stmt_remove_catch_break.

stmt_remove_catch_break:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \quad \text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \#\# \text{catch_break})(s) = \text{stmt}(s)}{}$$

This completes the proof of stmt_remove_catch_break.

Q.E.D.

C.203.68 Single_Statement_Rewrites0.stmt_ok_lift

Terse proof for stmt_ok_lift.

C Proof scripts

stmt_ok_lift:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt1}, \text{stmt2}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{OK}?(\text{stmt1}(s)) \supset (\text{stmt1} \text{ ## lift}(\text{stmt2}))(s) = (\text{stmt1} \text{ ## stmt2})(s)}$$

This completes the proof of `stmt_ok_lift`.

Q.E.D.

C.203.69 Single_Statement_Rewrites0.while_unroll_TCC1

Terse proof for `while_unroll_TCC1`.

while_unroll_TCC1:

$$\frac{\{1\} \quad \forall (\text{max}: \text{nat}): \text{max} > 0 \supset \text{max} - 1 \geq 0}$$

Repeatedly Skolemizing and flattening,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `while_unroll_TCC1`.

Q.E.D.

C.203.70 Single_Statement_Rewrites0.while_unroll

Terse proof for `while_unroll`.

while_unroll:

$$\frac{\{1\} \quad \forall (\text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \text{max}: \text{nat}, s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{max} > 0 \supset \text{while}(\text{max}, \text{b_ex}, \text{stmt})(s) = \text{if_else}(\text{b_ex}, \text{stmt} \text{ ## catch_continue} \text{ ## while}(\text{max} - 1, \text{b_ex}, \text{stmt}) \text{ ## catch_break}, \text{skip})(s)}$$

Repeatedly Skolemizing and flattening,

Expanding the definition of `while`,

Using lemma `while_as_if_while`,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of `while_unroll`.

Q.E.D.

C.203.71 Single_Statement_Rewrites0.stmt_while_unroll

Terse proof for `stmt_while_unroll`.

stmt_while_unroll:

$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], \max: nat, s: State, \\ \text{stmt1}, \text{stmt2}: [State \rightarrow StmtResult[State]]): \\ \max > 0 \supset \\ (\text{stmt1} \#\# \text{while}(\max, b_ex, \text{stmt2}))(s) = \\ (\text{stmt1} \#\# \\ \text{if_else}(b_ex, \\ \text{stmt2} \#\# \text{catch_continue} \#\# \text{while}(\max - 1, b_ex, \text{stmt2}) \#\# \text{catch_break}, \\ \text{skip})) \\ (s)$

Repeatedly Skolemizing and flattening,

Expanding the definition of $\#\#$,

Expanding the definition of lift,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Rewriting using while_unroll, matching in $*$,

This completes the proof of `stmt_while_unroll`.

Q.E.D.

C.203.72 Single_Statement_Rewrites0.iterate_while_ok

Terse proof for `iterate_while_ok`.

iterate_while_ok:

$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], s_1: State, \\ \text{stmt}: [State \rightarrow StmtResult[State]], n: nat): \\ (\forall (s: State): OK?((e2s(b_ex) \#\# \text{stmt})(s))) \supset \\ OK?(iterate_while(n, b_ex, \text{stmt})(s_1))$
--

Inducting on n on formula 1,

we get 2 subgoals:

iterate_while_ok.1:

$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], s_1: State, \\ \text{stmt}: [State \rightarrow StmtResult[State]]): \\ (\forall (s: State): OK?((e2s(b_ex) \#\# \text{stmt})(s))) \supset \\ OK?(iterate_while(0, b_ex, \text{stmt})(s_1))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `iterate_while_ok.1`.

iterate_while_ok.2:

<pre> {1} ∀ j: (∀ (b_ex: [State → ExprResult[State, bool]], s1: State, stmt: [State → StmtResult[State]]): (∀ (s: State): OK?((e2s(b_ex) ## stmt)(s)) ⊃ OK?(iterate_while(j, b_ex, stmt)(s1))) ⊃ (∀ (b_ex: [State → ExprResult[State, bool]], s1: State, stmt: [State → StmtResult[State]]): (∀ (s: State): OK?((e2s(b_ex) ## stmt)(s)) ⊃ OK?(iterate_while(j + 1, b_ex, stmt)(s1))) </pre>
--

Repeatedly Skolemizing and flattening,
Expanding the definition of iterate_while,
Instantiating quantified variables,
Expanding the definition of ##,
Expanding the definition of lift,
Case splitting on OK?(catch_continue((e2s(b_ex!1) ## stmt!1)(s1!1))),
we get 2 subgoals:

iterate_while_ok.2.1:

<pre> {-1} OK?(catch_continue((e2s(b_ex') ## stmt')(s1'))) {-2} j' ≥ 0 {-3} ∀ (s1: State): (∀ (s: State): OK?((e2s(b_ex') ## stmt')(s)) ⊃ OK?(iterate_while(j', b_ex', stmt')(s1))) {-4} ∀ (s: State): OK?((e2s(b_ex') ## stmt')(s)) </pre>
<pre> {1} OK?(CASES catch_continue((e2s(b_ex') ## stmt')(s1')) OF OK(state): iterate_while(j', b_ex', stmt')(state) ELSE catch_continue((e2s(b_ex') ## stmt')(s1')) ENDCASES) </pre>

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
Instantiating the top quantifier in -3 with the terms: (state(catch_continue((e2s(b_ex!1) ## stmt!1)(s1!1))))),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of iterate_while_ok.2.1.

iterate_while_ok.2.2:

<pre> {-1} j' ≥ 0 {-2} ∀ (s1: State): (∀ (s: State): OK?((e2s(b_ex') ## stmt')(s)) ⊃ OK?(iterate_while(j', b_ex', stmt')(s1))) {-3} ∀ (s: State): OK?((e2s(b_ex') ## stmt')(s)) </pre>
<pre> {1} OK?(catch_continue((e2s(b_ex') ## stmt')(s1'))) {2} OK?(CASES catch_continue((e2s(b_ex') ## stmt')(s1')) OF OK(state): iterate_while(j', b_ex', stmt')(state) ELSE catch_continue((e2s(b_ex') ## stmt')(s1')) ENDCASES) </pre>

Hiding formulas: 2,
Expanding the definition of catch_continue,
Instantiating quantified variables,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `iterate_while_ok.2.2`.

Q.E.D.

C.203.73 Single_Statement_Rewrites0.while_hang

Terse proof for `while_hang`.

`while_hang`:

$$\frac{\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], stmt: [State \rightarrow StmtResult[State]]): \quad (\forall (s: State): \quad OK?(b_ex(s) \wedge data(b_ex(s)) \wedge OK?((e2s(b_ex) \#\# stmt)(s))) \quad \supset \quad while(b_ex, stmt) = hang_result}{}$$

Repeatedly Skolemizing and flattening,

Applying decompose-equality,

Expanding the definition of `while`,

Expanding the definition of `hang_result`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Repeatedly Skolemizing and flattening,

Expanding the definition of `while_termination_point?`,

Hiding formulas: 1,

Case splitting on `OK?(iterate_while(n!1, b_ex!1, stmt!1)(x!1))`,

we get 2 subgoals:

`while_hang.1`:

$$\frac{\begin{array}{l} \{-1\} \quad OK?(iterate_while(n', b_ex', stmt')(x')) \\ \{-2\} \quad n' \geq 0 \\ \{-3\} \quad \neg OK?(iterate_while(n', b_ex', stmt')(x')) \vee \\ \quad \neg OK?(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \vee \\ \quad \neg data(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \\ \{-4\} \quad \forall (s: State): \\ \quad OK?(b_ex'(s) \wedge data(b_ex'(s)) \wedge OK?((e2s(b_ex') \#\# stmt')(s))) \end{array}}{}$$

Instantiating the top quantifier in -4 with the terms: `(state(iterate_while(n!1, b_ex!1, stmt!1)(x!1)))`,

we get 2 subgoals:

`while_hang.1.1`:

$$\frac{\begin{array}{l} \{-1\} \quad OK?(iterate_while(n', b_ex', stmt')(x')) \\ \{-2\} \quad n' \geq 0 \\ \{-3\} \quad \neg OK?(iterate_while(n', b_ex', stmt')(x')) \vee \\ \quad \neg OK?(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \vee \\ \quad \neg data(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \\ \{-4\} \quad OK?(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \wedge \\ \quad data(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) \wedge \\ \quad OK?((e2s(b_ex') \#\# stmt')(state(iterate_while(n', b_ex', stmt')(x')))) \end{array}}{}$$

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `while_hang.1.1`.

`while_hang.1.2:`

<pre>{-1} OK?(iterate_while(n', b_ex', stmt')(x')) {-2} n' ≥ 0 {-3} ¬ OK?(iterate_while(n', b_ex', stmt')(x')) ∨ ¬ OK?(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) ∨ ¬ data(b_ex'(state(iterate_while(n', b_ex', stmt')(x'))))</pre>	<hr style="border: 0.5px solid black;"/> <pre>{1} OK?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Break?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Continue?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Return?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Switch?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Default?[State](iterate_while[State](n', b_ex', stmt')(x')) ∨ Exception?[State](iterate_while[State](n', b_ex', stmt')(x'))</pre>
---	---

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `while_hang.1.2`.

`while_hang.2:`

<pre>{-1} n' ≥ 0 {-2} ¬ OK?(iterate_while(n', b_ex', stmt')(x')) ∨ ¬ OK?(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) ∨ ¬ data(b_ex'(state(iterate_while(n', b_ex', stmt')(x')))) {-3} ∃ (s: State): OK?(b_ex'(s)) ∧ data(b_ex'(s)) ∧ OK?((e2s(b_ex') ## stmt')(s))</pre>	<hr style="border: 0.5px solid black;"/> <pre>{1} OK?(iterate_while(n', b_ex', stmt')(x'))</pre>
---	--

Rewriting using `iterate_while_ok`, matching in *,
Keeping (-3 1) and hiding *,
Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `while_hang.2`.
Q.E.D.

C.203.74

Single_Statement_Rewrites0.composition_assoc_rewrite_stmt_ok

Terse proof for `composition_assoc_rewrite_stmt_ok`.

`composition_assoc_rewrite_stmt_ok:`

<pre>{1} ∃ (cstmt: [StmtResult[State] → StmtResult[State]], s: State, stmt, stmt1: [State → StmtResult[State]]): OK?(stmt(s)) ⊃ (stmt ## (stmt1 ## cstmt))(s) = ((stmt ## stmt1) ## cstmt)(s)</pre>	<hr style="border: 0.5px solid black;"/>
---	--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `composition_assoc_rewrite_stmt_ok`.
Q.E.D.

C.203.75 Single_Statement_Rewrites0.composition_assoc_rewrite_stmt_ok_cstmt

Terse proof for composition_assoc_rewrite_stmt_ok_cstmt.

composition_assoc_rewrite_stmt_ok_cstmt:

$$\{1\} \quad \forall (cstmt, cstmt1: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}(\text{stmt}(s)) \supset \\ ((\text{stmt} \## (\text{stmt1} \## \text{cstmt})) \## \text{cstmt1})(s) = \\ (((\text{stmt} \## \text{stmt1}) \## \text{cstmt}) \## \text{cstmt1})(s)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of composition_assoc_rewrite_stmt_ok_cstmt.
Q.E.D.

C.204 Proofs for Single_Statement_Rewrites1 (statement-rewrites.pvs)

C.204.1 Single_Statement_Rewrites1.forward_s_c_s_of_s_expr

Terse proof for forward_s_c_s_of_s_expr.

forward_s_c_s_of_s_expr:

$$\{1\} \quad \forall (cstmt: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ (\text{stmt} \## \text{cstmt})(s) = \text{stmt}(s) \supset (\text{stmt} \## \text{cstmt} \## \text{expr})(s) = (\text{stmt} \## \text{expr})(s)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of forward_s_c_s_of_s_expr.
Q.E.D.

C.204.2 Single_Statement_Rewrites1.stmt_ok_lift_expr

Terse proof for stmt_ok_lift_expr.

stmt_ok_lift_expr:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt1}, \text{stmt2}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}(\text{stmt1}(s)) \supset (\text{stmt1} \## \text{lift}(\text{stmt2}) \## \text{expr})(s) = (\text{stmt1} \## \text{stmt2} \## \text{expr})(s)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of stmt_ok_lift_expr.
Q.E.D.

C.204.3 Single_Statement_Rewrites1.break_break_stmt_expr

Terse proof for break_break_stmt_expr.

break_break_stmt_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{Break?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{stmt1} \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s)$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `break_break_stmt_expr`.
Q.E.D.

C.204.4

Single_Statement_Rewrites1.break_break_catch_continue_expr

Terse proof for `break_break_catch_continue_expr`.

break_break_catch_continue_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{Break?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{catch_continue} \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s)$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `break_break_catch_continue_expr`.
Q.E.D.

C.204.5

Single_Statement_Rewrites1.break_break_catch_default_expr

Terse proof for `break_break_catch_default_expr`.

break_break_catch_default_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{Break?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{catch_default} \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s)$
--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `break_break_catch_default_expr`.
Q.E.D.

C.204.6 Single_Statement_Rewrites1.break_break_lift_stmt_expr

Terse proof for `break_break_lift_stmt_expr`.

break_break_lift_stmt_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{Break?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{lift}(\text{stmt1}) \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s)$
--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `break_break_lift_stmt_expr`.
 Q.E.D.

C.204.7 Single_Statement_Rewrites1.break_break_case_expr

Terse proof for `break_break_case_expr`.

`break_break_case_expr`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], n: \text{int}, s: \text{State}, \\ \quad \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \quad \text{Break?}(\text{stmt}(s)) \supset \\ \quad (\text{stmt} \## \text{case}(n) \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s) \\ \hline \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `break_break_case_expr`.
 Q.E.D.

C.204.8 Single_Statement_Rewrites1.break_break_default_expr

Terse proof for `break_break_default_expr`.

`break_break_default_expr`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \quad \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \quad \text{Break?}(\text{stmt}(s)) \supset \\ \quad (\text{stmt} \## \text{default} \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s) \\ \hline \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `break_break_default_expr`.
 Q.E.D.

C.204.9 Single_Statement_Rewrites1.continue_break_stmt_expr

Terse proof for `continue_break_stmt_expr`.

`continue_break_stmt_expr`:

$$\begin{array}{|l} \hline \{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \quad \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \quad \text{Continue?}(\text{stmt}(s)) \supset \\ \quad (\text{stmt} \## \text{stmt1} \## \text{catch_break} \## \text{expr})(s) = (\text{stmt} \## \text{catch_break} \## \text{expr})(s) \\ \hline \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `continue_break_stmt_expr`.
 Q.E.D.

C.204.10

Single_Statement_Rewrites1.continue_break_catch_continue_expr

Terse proof for `continue_break_catch_continue_expr`.

continue_break_catch_continue_expr:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue?}(\text{stmt}(s)) \supset (\text{stmt} \## \text{catch_break} \## \text{catch_continue} \## \text{expr})(s) = (\text{stmt} \## \text{catch_continue} \## \text{expr})(s)}{}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `continue_break_catch_continue_expr`.
Q.E.D.

C.204.11

Single_Statement_Rewrites1.continue_break_catch_default_expr

Terse proof for `continue_break_catch_default_expr`.

continue_break_catch_default_expr:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue?}(\text{stmt}(s)) \supset (\text{stmt} \## \text{catch_default} \## \text{catch_continue} \## \text{expr})(s) = (\text{stmt} \## \text{catch_continue} \## \text{expr})(s)}{}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `continue_break_catch_default_expr`.
Q.E.D.

C.204.12 Single_Statement_Rewrites1.continue_break_lift_stmt_expr

Terse proof for `continue_break_lift_stmt_expr`.

continue_break_lift_stmt_expr:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \text{Continue?}(\text{stmt}(s)) \supset (\text{stmt} \## \text{lift}(\text{stmt1}) \## \text{catch_continue} \## \text{expr})(s) = (\text{stmt} \## \text{catch_continue} \## \text{expr})(s)}{}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `continue_break_lift_stmt_expr`.
Q.E.D.

C.204.13 Single_Statement_Rewrites1.continue_break_case_expr

Terse proof for `continue_break_case_expr`.

continue_break_case_expr:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], n: \text{int}, s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \\ \text{Continue?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{case}(n) \## \text{catch_continue} \## \text{expr})(s) = \\ (\text{stmt} \## \text{catch_continue} \## \text{expr})(s)}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of continue_break_case_expr.
Q.E.D.

C.204.14 Single_Statement_Rewrites1.continue_break_default_expr

Terse proof for continue_break_default_expr.

continue_break_default_expr:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \\ \text{Continue?}(\text{stmt}(s)) \supset \\ (\text{stmt} \## \text{default} \## \text{catch_continue} \## \text{expr})(s) = (\text{stmt} \## \text{catch_continue} \## \text{expr})(s)}{}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of continue_break_default_expr.
Q.E.D.

C.204.15 Single_Statement_Rewrites1.while_unroll_expr_TCC1

Terse proof for while_unroll_expr_TCC1.

while_unroll_expr_TCC1:

$$\frac{\{1\} \quad \forall (\text{max}: \text{nat}): \text{max} > 0 \supset \text{max} - 1 \geq 0}{}$$

Repeatedly Skolemizing and flattening,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of while_unroll_expr_TCC1.
Q.E.D.

C.204.16 Single_Statement_Rewrites1.while_unroll_expr

Terse proof for while_unroll_expr.

`while_unroll_expr`:

<pre> {1} ∃ (b_ex: [State → ExprResult[State, bool]], expr: [State → ExprResult[State, Data]]), max: nat, s: State, stmt: [State → StmtResult[State]]): max > 0 ⊃ (while(max, b_ex, stmt) ## expr)(s) = (if_else(b_ex, stmt ## catch_continue ## while(max - 1, b_ex, stmt) ## catch_break, skip) ## expr) (s) </pre>
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Rewriting using `while_unroll`, matching in *,
 This completes the proof of `while_unroll_expr`.
 Q.E.D.

C.204.17 Single_Statement_Rewrites1.while_unroll_lexpr

Terse proof for `while_unroll_lexpr`.

`while_unroll_lexpr`:

<pre> {1} ∃ (b_ex: [State → ExprResult[State, bool]], lexpr: [StmtResult[State] → ExprResult[State, Data]], max: nat, s: State, stmt: [State → StmtResult[State]]): max > 0 ⊃ (while(max, b_ex, stmt) ## lexpr)(s) = (if_else(b_ex, stmt ## catch_continue ## while(max - 1, b_ex, stmt) ## catch_break, skip) ## lexpr) (s) </pre>
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Rewriting using `while_unroll`, matching in *,
 This completes the proof of `while_unroll_lexpr`.
 Q.E.D.

C.204.18 Single_Statement_Rewrites1.stmt_while_unroll_expr

Terse proof for `stmt_while_unroll_expr`.

stmt_while_unroll_expr:

<pre> {1} ∃ (b_ex: [State → ExprResult[State, bool]], expr: [State → ExprResult[State, Data]], max: nat, s: State, stmt1, stmt2: [State → StmtResult[State]]): max > 0 ⊃ (stmt1 ## while(max, b_ex, stmt2) ## expr)(s) = (stmt1 ## if_else(b_ex, stmt2 ## catch_continue ## while(max - 1, b_ex, stmt2) ## catch_break, skip) ## expr) (s) </pre>
--

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Expanding the definition of while,
 Using lemma while_as_if_while,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of stmt_while_unroll_expr.
 Q.E.D.

C.204.19 Single_Statement_Rewrites1.stmt_while_unroll_lexpr

Terse proof for stmt_while_unroll_lexpr.

stmt_while_unroll_lexpr:

<pre> {1} ∃ (b_ex: [State → ExprResult[State, bool]], lexpr: [StmtResult[State] → ExprResult[State, Data]], max: nat, s: State, stmt1, stmt2: [State → StmtResult[State]]): max > 0 ⊃ (stmt1 ## while(max, b_ex, stmt2) ## lexpr)(s) = (stmt1 ## if_else(b_ex, stmt2 ## catch_continue ## while(max - 1, b_ex, stmt2) ## catch_break, skip) ## lexpr) (s) </pre>

Repeatedly Skolemizing and flattening,
 Expanding the definition of ##,
 Expanding the definition of while,
 Using lemma while_as_if_while,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of stmt_while_unroll_lexpr.
 Q.E.D.

C.204.20 Single_Statement_Rewrites1.e2s_ok

Terse proof for e2s_ok.

e2s_ok:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$$

$$\text{OK}?(\text{expr}(s)) \supset \text{OK}?(\text{e2s}(\text{expr})(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of e2s_ok.

Q.E.D.

C.204.21 Single_Statement_Rewrites1.stmt_e2s_ok

Terse proof for stmt_e2s_ok.

stmt_e2s_ok:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State},$$

$$\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$\text{OK}?((\text{stmt} \ \#\# \ \text{expr})(s)) \supset \text{OK}?((\text{stmt} \ \#\# \ \text{e2s}(\text{expr}))(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stmt_e2s_ok.

Q.E.D.

C.204.22 Single_Statement_Rewrites1.e2s_state_TCC1

Terse proof for e2s_state_TCC1.

e2s_state_TCC1:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$$

$$\text{OK}?(\text{expr}(s)) \supset$$

$$\text{OK}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Break}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Continue}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Return}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Switch}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Default}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s))) \vee$$

$$\text{Exception}?[\text{State}](\text{e2s}[\text{State}, \text{Data}](\text{expr}(s)))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of e2s_state_TCC1.

Q.E.D.

C.204.23 Single_Statement_Rewrites1.e2s_state_TCC2

Terse proof for e2s_state_TCC2.

e2s_state_TCC2:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$$

$$\text{OK}?(\text{expr}(s)) \supset \text{OK}?[\text{State}, \text{Data}](\text{expr}(s)) \vee \text{Exception}?[\text{State}, \text{Data}](\text{expr}(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of e2s_state_TCC2.

Q.E.D.

C.204.24 Single_Statement_Rewrites1.e2s_state

Terse proof for e2s_state.

e2s_state:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$ $\text{OK}?(\text{expr}(s)) \supset \text{state}(\text{e2s}(\text{expr})(s)) = \text{state}(\text{expr}(s))$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of e2s_state.

Q.E.D.

C.204.25 Single_Statement_Rewrites1.stmt_e2s_state_TCC1

Terse proof for stmt_e2s_state_TCC1.

stmt_e2s_state_TCC1:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State},$ $\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$ $\text{OK}?((\text{stmt} \ \#\# \ \text{expr})(s)) \supset$ $\text{OK}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Break}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Continue}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Return}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Switch}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Default}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s)) \vee$ $\text{Exception}?[\text{State}]((\#\# [\text{State}] (\text{stmt}, \text{e2s}[\text{State}, \text{Data}] (\text{expr})))(s))$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stmt_e2s_state_TCC1.

Q.E.D.

C.204.26 Single_Statement_Rewrites1.stmt_e2s_state_TCC2

Terse proof for stmt_e2s_state_TCC2.

stmt_e2s_state_TCC2:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State},$ $\text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$ $\text{OK}?((\text{stmt} \ \#\# \ \text{expr})(s)) \supset$ $\text{OK}?[\text{State}, \text{Data}]((\#\# [\text{State}, \text{Data}] (\text{stmt}, \text{expr})(s)) \vee$ $\text{Exception}?[\text{State}, \text{Data}]((\#\# [\text{State}, \text{Data}] (\text{stmt}, \text{expr})(s))$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stmt_e2s_state_TCC2.

Q.E.D.

C.204.27 Single_Statement_Rewrites1.stmt_e2s_state

Terse proof for `stmt_e2s_state`.

`stmt_e2s_state`:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \\ \text{OK?}((\text{stmt} \## \text{expr})(s)) \supset \\ \text{state}((\text{stmt} \## \text{e2s}(\text{expr}))(s)) = \text{state}((\text{stmt} \## \text{expr})(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_e2s_state`.

Q.E.D.

C.204.28 Single_Statement_Rewrites1.comp_eval_if_ok_fstmt

Terse proof for `comp_eval_if_ok_fstmt`.

`comp_eval_if_ok_fstmt`:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \\ \text{fstmt}: [\text{Data} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State}) : \\ \text{OK?}(\text{expr}(s)) \supset \\ (\text{expr} \## \text{fstmt})(s) = (\text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}(\text{expr}(s))))(s)$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `comp_eval_if_ok_fstmt`.

Q.E.D.

C.204.29 Single_Statement_Rewrites1.stmt_eval_if_ok_fstmt

Terse proof for `stmt_eval_if_ok_fstmt`.

`stmt_eval_if_ok_fstmt`:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \\ \text{fstmt}: [\text{Data} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]) : \\ \text{OK?}((\text{stmt} \## \text{expr})(s)) \supset \\ (\text{stmt} \## (\text{expr} \## \text{fstmt}))(s) = \\ (\text{stmt} \## (\text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}((\text{stmt} \## \text{expr})(s))))) (s)$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_eval_if_ok_fstmt`.

Q.E.D.

C.204.30 Single_Statement_Rewrites1.comp_eval_if_ok_fstmt_cstmt

Terse proof for `comp_eval_if_ok_fstmt_cstmt`.

comp_eval_if_ok_fstmt_cstmt:

$\{1\} \quad \forall (\text{cstmt}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]],$ $\quad \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]],$ $\quad \text{fstmt}: [\text{Data} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State}):$ $\text{OK?}(\text{expr}(s)) \supset$ $((\text{expr} \## \text{fstmt}) \## \text{cstmt})(s) =$ $(\text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}(\text{expr}(s))) \## \text{cstmt})(s)$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of comp_eval_if_ok_fstmt_cstmt.
Q.E.D.

C.204.31 Single_Statement_Rewrites1.stmt_eval_if_ok_fstmt_cstmt

Terse proof for stmt_eval_if_ok_fstmt_cstmt.

stmt_eval_if_ok_fstmt_cstmt:

$\{1\} \quad \forall (\text{cstmt}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]],$ $\quad \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]],$ $\quad \text{fstmt}: [\text{Data} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State},$ $\quad \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$ $\text{OK?}((\text{stmt} \## \text{expr})(s)) \supset$ $(\text{stmt} \## (\text{expr} \## \text{fstmt}) \## \text{cstmt})(s) =$ $(\text{stmt} \## \text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}((\text{stmt} \## \text{expr})(s))) \## \text{cstmt})(s)$
--

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of stmt_eval_if_ok_fstmt_cstmt.
Q.E.D.

C.204.32

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_1

Terse proof for composition_assoc_rewrite_expr_1.

composition_assoc_rewrite_expr_1:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$ $(\text{stmt} \## (\text{stmt1} \## \text{expr})) = ((\text{stmt} \## \text{stmt1}) \## \text{expr})$
--

Repeatedly Skolemizing and flattening,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of composition_assoc_rewrite_expr_1.
Q.E.D.

C.204.33

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_2

Terse proof for composition_assoc_rewrite_expr_2.

composition_assoc_rewrite_expr_2:

$$\{1\} \quad \forall (cstmt: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$(\text{stmt} \## (\text{cstmt} \## \text{expr})) = ((\text{stmt} \## \text{cstmt}) \## \text{expr})$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of composition_assoc_rewrite_expr_2.
 Q.E.D.

C.204.34

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_3

Terse proof for composition_assoc_rewrite_expr_3.

composition_assoc_rewrite_expr_3:

$$\{1\} \quad \forall (cstmt, cstmt1: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]):$$

$$(\text{cstmt} \## (\text{cstmt1} \## \text{expr})) = ((\text{cstmt} \## \text{cstmt1}) \## \text{expr})$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of composition_assoc_rewrite_expr_3.
 Q.E.D.

C.204.35

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_4

Terse proof for composition_assoc_rewrite_expr_4.

composition_assoc_rewrite_expr_4:

$$\{1\} \quad \forall (\text{lexpr}: [\text{StmtResult}[\text{State}] \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$$

$$(\text{stmt} \## (\text{lift}(\text{stmt1}) \## \text{lexpr})) = ((\text{stmt} \## \text{stmt1}) \## \text{lexpr})$$

,
 Applying decompose-equality,
 This completes the proof of composition_assoc_rewrite_expr_4.
 Q.E.D.

C.204.36

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_5

Terse proof for composition_assoc_rewrite_expr_5.

composition_assoc_rewrite_expr_5:

$$\{1\} \quad \forall (\text{cstmt}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{lexpr}: [\text{StmtResult}[\text{State}] \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ (\text{stmt} \## (\text{cstmt} \## \text{lexpr})) = ((\text{stmt} \## \text{cstmt}) \## \text{lexpr})$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_expr_5`.
 Q.E.D.

C.204.37

Single_Statement_Rewrites1.composition_assoc_rewrite_expr_6

Terse proof for `composition_assoc_rewrite_expr_6`.

composition_assoc_rewrite_expr_6:

$$\{1\} \quad \forall (\text{cstmt}, \text{cstmt1}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{lexpr}: [\text{StmtResult}[\text{State}] \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]): \\ (\text{cstmt} \## (\text{cstmt1} \## \text{lexpr})) = ((\text{cstmt} \## \text{cstmt1}) \## \text{lexpr})$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_expr_6`.
 Q.E.D.

C.204.38

Single_Statement_Rewrites1.composition_assoc_rewrite_stmt_ok

Terse proof for `composition_assoc_rewrite_stmt_ok`.

composition_assoc_rewrite_stmt_ok:

$$\{1\} \quad \forall (\text{cstmt}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}(\text{stmt}(s)) \supset (\text{stmt} \## (\text{stmt1} \## \text{cstmt}))(s) = ((\text{stmt} \## \text{stmt1}) \## \text{cstmt})(s)$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_stmt_ok`.
 Q.E.D.

C.204.39 Sin-

gle_Statement_Rewrites1.composition_assoc_rewrite_stmt_ok_expr

Terse proof for `composition_assoc_rewrite_stmt_ok_expr`.

composition_assoc_rewrite_stmt_ok_expr:

$$\{1\} \quad \forall (cstmt: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK}?(stmt(s)) \supset \\ (stmt \## (stmt1 \## cstmt) \## expr)(s) = ((stmt \## stmt1) \## cstmt \## expr)(s)$$

,
This completes the proof of composition_assoc_rewrite_stmt_ok_expr.
Q.E.D.

C.204.40 Single_Statement_Rewrites1.composition_assoc_rewrite_stmt_ok_expr_lexpr

Terse proof for composition_assoc_rewrite_stmt_ok_expr_lexpr.

composition_assoc_rewrite_stmt_ok_expr_lexpr:

$$\{1\} \quad \forall (cstmt: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \\ \text{lexpr}: [\text{StmtResult}[\text{State}] \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}, \\ \text{stmt}, \text{stmt1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK}?(stmt(s)) \supset \\ (stmt \## (stmt1 \## cstmt) \## lexpr)(s) = ((stmt \## stmt1) \## cstmt \## lexpr)(s)$$

,
This completes the proof of composition_assoc_rewrite_stmt_ok_expr_lexpr.
Q.E.D.

C.204.41 Single_Statement_Rewrites1.ok_result_fstmt

Terse proof for ok_result_fstmt.

ok_result_fstmt:

$$\{1\} \quad \forall (fstmt: [\text{Data} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], \text{data}: \text{Data}): \\ \text{ok_result}(\text{data}) \## \text{fstmt} = \text{fstmt}(\text{data})$$

Repeatedly Skolemizing and flattening,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of ok_result_fstmt.
Q.E.D.

C.204.42 Single_Statement_Rewrites1.pm_q_prop_read_ok_s_read_ok

Terse proof for pm_q_prop_read_ok_s_read_ok.

pm_q_prop_read_ok_s_read_ok:

$$\{1\} \quad \forall (\text{addr}: \text{Address}, \text{dt}: (\text{interpreted_data_type}?\text{[Data]}), \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}): \\ \text{pm_q_prop_read}(\text{pm}, \text{dt}, \text{addr})(\text{skip}(s)) \supset \text{OK}?(read_data(\text{pm}, \text{dt})(\text{addr})(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of pm_q_prop_read_ok_s_read_ok.

Q.E.D.

C.205 Proofs for Single_Statement_Rewrites2 (statement-rewrites.pvs)

C.205.1 Single_Statement_Rewrites2.ok_result_fexpr

Terse proof for `ok_result_fexpr`.

`ok_result_fexpr`:

$$\frac{\{1\} \quad \forall (\text{fexpr}: [\text{Data2} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]]], \text{data}: \text{Data2}):}{\text{ok_result}(\text{data}) \ \#\# \ \text{fexpr} = \text{fexpr}(\text{data})}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `ok_result_fexpr`.
 Q.E.D.

C.205.2 Single_Statement_Rewrites2.e2s_merge

Terse proof for `e2s_merge`.

`e2s_merge`:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]):}{(\text{e2s}(\text{expr}) \ \#\# \ \text{e2s}(\text{expr1})) = \text{e2s}(\text{expr} \ \#\# \ \text{expr1})}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `e2s_merge`.
 Q.E.D.

C.205.3 Single_Statement_Rewrites2.stmt_e2s_merge

Terse proof for `stmt_e2s_merge`.

`stmt_e2s_merge`:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):}{(\text{stmt} \ \#\# \ \text{e2s}(\text{expr}) \ \#\# \ \text{e2s}(\text{expr1})) = (\text{stmt} \ \#\# \ \text{e2s}(\text{expr} \ \#\# \ \text{expr1}))}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `stmt_e2s_merge`.
 Q.E.D.

C.205.4 Single_Statement_Rewrites2.e2s_expr

Terse proof for e2s_expr.

e2s_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ s: \text{State}): \\ (\text{e2s}(\text{expr1}) \## \text{expr})(s) = (\text{expr1} \## \text{expr})(s)$

,
This completes the proof of e2s_expr.
Q.E.D.

C.205.5 Single_Statement_Rewrites2.stmt_e2s_expr

Terse proof for stmt_e2s_expr.

stmt_e2s_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ (\text{stmt} \## \text{e2s}(\text{expr1}) \## \text{expr})(s) = (\text{stmt} \## \text{expr1} \## \text{expr})(s)$
--

,
This completes the proof of stmt_e2s_expr.
Q.E.D.

C.205.6 Single_Statement_Rewrites2.composition_assoc_expression_rewrite_stmt

Terse proof for composition_assoc_expression_rewrite_stmt.

composition_assoc_expression_rewrite_stmt:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ (\text{stmt} \## (\text{expr} \## \text{expr1})) = ((\text{stmt} \## \text{expr}) \## \text{expr1})$

Repeatedly Skolemizing and flattening,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of composition_assoc_expression_rewrite_stmt.
Q.E.D.

C.205.7 Single_Statement_Rewrites2.comp_eval_if_ok_fstmt_expr

Terse proof for comp_eval_if_ok_fstmt_expr.

comp_eval_if_ok_fstmt_expr:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{fstmt}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State}): \\ \text{OK?}(\text{expr}(s)) \supset \\ ((\text{expr} \## \text{fstmt}) \## \text{expr1})(s) = \\ (\text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}(\text{expr}(s))) \## \text{expr1})(s)$$

,
This completes the proof of comp_eval_if_ok_fstmt_expr.
Q.E.D.

C.205.8 Single_Statement_Rewrites2.stmt_eval_if_ok_fstmt_expr

Terse proof for stmt_eval_if_ok_fstmt_expr.

stmt_eval_if_ok_fstmt_expr:

$$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{fstmt}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{StmtResult}[\text{State}]]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}((\text{stmt} \## \text{expr})(s)) \supset \\ (\text{stmt} \## (\text{expr} \## \text{fstmt}) \## \text{expr1})(s) = \\ (\text{stmt} \## \text{e2s}(\text{expr}) \## \text{fstmt}(\text{data}((\text{stmt} \## \text{expr})(s))) \## \text{expr1})(s)$$

,
This completes the proof of stmt_eval_if_ok_fstmt_expr.
Q.E.D.

C.205.9 Single_Statement_Rewrites2.stmt_eval_if_ok_fexpr

Terse proof for stmt_eval_if_ok_fexpr.

stmt_eval_if_ok_fexpr:

$$\{1\} \quad \forall (\text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{fexpr}: [\text{Data2} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]]], s: \text{State}, \\ \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}((\text{stmt} \## \text{expr1})(s)) \supset \\ (\text{stmt} \## (\text{expr1} \## \text{fexpr}))(s) = \\ (\text{stmt} \## \text{expr1} \## \text{fexpr}(\text{data}((\text{stmt} \## \text{expr1})(s))))(s)$$

,
This completes the proof of stmt_eval_if_ok_fexpr.
Q.E.D.

C.205.10

Single_Statement_Rewrites2.comp_eval_if_ok_fstmt_cstmt_expr

Terse proof for comp_eval_if_ok_fstmt_cstmt_expr.

comp_eval_if_ok_fstmt_cstmt_expr:

{1} \forall (cstmt: [StmtResult[State] \rightarrow StmtResult[State]],
 expr: [State \rightarrow ExprResult[State, Data1]], expr1: [State \rightarrow ExprResult[State, Data2]],
 fstmt: [Data1 \rightarrow [State \rightarrow StmtResult[State]]], s: State):
 OK?(expr(s)) \supset
 ((expr ## fstmt) ## cstmt) ## expr1(s) =
 ((e2s(expr) ## fstmt(data(expr(s)))) ## cstmt) ## expr1(s)

,
 This completes the proof of comp_eval_if_ok_fstmt_cstmt_expr.
 Q.E.D.

C.205.11

Single_Statement_Rewrites2.stmt_eval_if_ok_fstmt_cstmt_expr

Terse proof for stmt_eval_if_ok_fstmt_cstmt_expr.

stmt_eval_if_ok_fstmt_cstmt_expr:

{1} \forall (cstmt: [StmtResult[State] \rightarrow StmtResult[State]],
 expr: [State \rightarrow ExprResult[State, Data1]], expr1: [State \rightarrow ExprResult[State, Data2]],
 fstmt: [Data1 \rightarrow [State \rightarrow StmtResult[State]]], s: State,
 stmt: [State \rightarrow StmtResult[State]]):
 OK?((stmt ## expr)(s)) \supset
 (stmt ## (expr ## fstmt) ## cstmt ## expr1)(s) =
 (stmt ## e2s(expr) ## fstmt(data((stmt ## expr)(s))) ## cstmt ## expr1)(s)

,
 This completes the proof of stmt_eval_if_ok_fstmt_cstmt_expr.
 Q.E.D.

C.206 Proofs for Single_Statement_Rewrites3 (statement-rewrites.pvs)

C.206.1 Single_Statement_Rewrites3.ok_result_elimination_2

Terse proof for ok_result_elimination_2.

ok_result_elimination_2:

{1} \forall (expr: [State \rightarrow ExprResult[State, Data1]], expr1: [State \rightarrow ExprResult[State, Data2]],
 data: Data3):
 ((expr ## ok_result[State, Data3](data)) ## expr1) = (expr ## expr1)

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of ok_result_elimination_2.

Q.E.D.

C.206.2 Single_Statement_Rewrites3.comp_eval_if_ok_fexpr_expr

Terse proof for comp_eval_if_ok_fexpr_expr.

comp_eval_if_ok_fexpr_expr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{fexpr}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data3}]]], s: \text{State}): \\ \text{OK?}(\text{expr}(s)) \supset \\ ((\text{expr} \## \text{fexpr}) \## \text{expr1})(s) = (\text{expr} \## \text{fexpr}(\text{data}(\text{expr}(s))) \## \text{expr1})(s)$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of comp_eval_if_ok_fexpr_expr.
 Q.E.D.

C.206.3 Single_Statement_Rewrites3.expr_eval_if_ok_fexpr

Terse proof for expr_eval_if_ok_fexpr.

expr_eval_if_ok_fexpr:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{fexpr}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data3}]]], s: \text{State}): \\ \text{OK?}((\text{expr1} \## \text{expr})(s)) \supset \\ (\text{expr1} \## (\text{expr} \## \text{fexpr}))(s) = \\ (\text{expr1} \## \text{expr} \## \text{fexpr}(\text{data}((\text{expr1} \## \text{expr})(s))))(s)$
--

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of expr_eval_if_ok_fexpr.
 Q.E.D.

C.206.4

Single_Statement_Rewrites3.composition_assoc_expression_rewrite

Terse proof for composition_assoc_expression_rewrite.

composition_assoc_expression_rewrite:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]], \\ \text{expr2}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data3}]]): \\ (\text{expr} \## (\text{expr1} \## \text{expr2})) = ((\text{expr} \## \text{expr1}) \## \text{expr2})$
--

Trying repeated skolemization, instantiation, and if-lifting,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of composition_assoc_expression_rewrite.
 Q.E.D.

C.206.5 Single_Statement_Rewrites3.stmt_eval_if_ok_fexpr_expr

Terse proof for `stmt_eval_if_ok_fexpr_expr`.

`stmt_eval_if_ok_fexpr_expr`:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]],$ $\quad \text{fexpr}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data3}]]], s: \text{State},$ $\quad \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]):$ $\text{OK?}((\text{stmt} \ \#\# \ \text{expr})(s)) \supset$ $(\text{stmt} \ \#\# \ (\text{expr} \ \#\# \ \text{fexpr}) \ \#\# \ \text{expr1})(s) =$ $(\text{stmt} \ \#\# \ \text{expr} \ \#\# \ \text{fexpr}(\text{data}((\text{stmt} \ \#\# \ \text{expr})(s)))) \ \#\# \ \text{expr1})(s)$
--

This completes the proof of `stmt_eval_if_ok_fexpr_expr`.
Q.E.D.

C.207 Proofs for Single_Statement_Rewrites4 (statement-rewrites.pvs)

C.207.1 Single_Statement_Rewrites4.expr_eval_if_ok_fexpr_expr

Terse proof for `expr_eval_if_ok_fexpr_expr`.

`expr_eval_if_ok_fexpr_expr`:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]], \text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]],$ $\quad \text{expr2}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data4}]],$ $\quad \text{fexpr}: [\text{Data2} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data3}]]], s: \text{State}):$ $\text{OK?}((\text{expr} \ \#\# \ \text{expr1})(s)) \supset$ $(\text{expr} \ \#\# \ (\text{expr1} \ \#\# \ \text{fexpr}) \ \#\# \ \text{expr2})(s) =$ $(\text{expr} \ \#\# \ \text{expr1} \ \#\# \ \text{fexpr}(\text{data}((\text{expr} \ \#\# \ \text{expr1})(s)))) \ \#\# \ \text{expr2})(s)$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `expr_eval_if_ok_fexpr_expr`.
Q.E.D.

C.208 Proofs for SkipStatements (statements.pvs)

This theory contains no provable formal statements.

C.209 Proofs for State_Transformer (state-transformer.pvs)

This theory contains no provable formal statements.

C.210 Proofs for State_Transformer_Lift (state-transformer.pvs)

This theory contains no provable formal statements.

C.211 Proofs for State_Transformer_Lift_Expr (state-transformer.pvs)

C.211.1 State_Transformer_Lift_Expr.ok_result_ok

Terse proof for ok_result_ok.

ok_result_ok:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{OK?}(\text{ok_result}(\text{data})(s))}$$

,
This completes the proof of ok_result_ok.
Q.E.D.

C.211.2 State_Transformer_Lift_Expr.ok_result_data_TCC1

Terse proof for ok_result_data_TCC1.

ok_result_data_TCC1:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{OK?}[\text{State}, \text{Data}](\text{ok_result}(\text{data})(s))}$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of ok_result_data_TCC1.
Q.E.D.

C.211.3 State_Transformer_Lift_Expr.ok_result_data

Terse proof for ok_result_data.

ok_result_data:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{data}(\text{ok_result}(\text{data})(s)) = \text{data}}$$

,
This completes the proof of ok_result_data.
Q.E.D.

C.211.4 State_Transformer_Lift_Expr.ok_result_state

Terse proof for ok_result_state.

ok_result_state:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{state}(\text{ok_result}(\text{data})(s)) = s}$$

,
This completes the proof of ok_result_state.
Q.E.D.

C.211.5 State_Transformer_Lift_Expr.expr_2_super_ok_result

Terse proof for `expr_2_super_ok_result`.

`expr_2_super_ok_result`:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{OK}?(\text{expr_2_super}(\text{ok_result}(\text{data}))(s))}$$

This completes the proof of `expr_2_super_ok_result`.

Q.E.D.

C.211.6 State_Transformer_Lift_Expr.ok_lift_ok

Terse proof for `ok_lift_ok`.

`ok_lift_ok`:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, d: \text{lift}[\text{Data}]): \text{up}?(d) \supset \text{ok_lift}(d)(s) = \text{OK}(s, \text{down}(d))}$$

This completes the proof of `ok_lift_ok`.

Q.E.D.

C.211.7 State_Transformer_Lift_Expr.has_next_state_ok_result

Terse proof for `has_next_state_ok_result`.

`has_next_state_ok_result`:

$$\frac{}{\{1\} \quad \forall (s: \text{State}, \text{data}: \text{Data}): \text{has_next_state}(\text{ok_result}(\text{data}))(s)}$$

This completes the proof of `has_next_state_ok_result`.

Q.E.D.

C.211.8 State_Transformer_Lift_Expr.has_next_state_fatal_result

Terse proof for `has_next_state_fatal_result`.

`has_next_state_fatal_result`:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \neg \text{has_next_state}(\text{fatal_result})(s)}$$

This completes the proof of `has_next_state_fatal_result`.

Q.E.D.

C.211.9 State_Transformer_Lift_Expr.expr_2_super_fatal_result

Terse proof for `expr_2_super_fatal_result`.

`expr_2_super_fatal_result`:

$$\frac{}{\{1\} \quad \forall (s: \text{State}): \text{expr_2_super}(\text{fatal_result})(s) = \text{Bottom}}$$

This completes the proof of `expr_2_super_fatal_result`.

Q.E.D.

C.212 Proofs for State_Transformer_Lift_Stmt (state-transformer.pvs)

This theory contains no provable formal statements.

C.213 Proofs for Statement_Composition_Rewrites (state-transformer.pvs)

C.213.1

Statement_Composition_Rewrites.composition_assoc_rewrite_1

Terse proof for composition_assoc_rewrite_1.

composition_assoc_rewrite_1:

$$\frac{\{1\} \quad \forall (\text{stmt}_1, \text{stmt}_2, \text{stmt}_3: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{stmt}_1 \## (\text{stmt}_2 \## \text{stmt}_3)) = ((\text{stmt}_1 \## \text{stmt}_2) \## \text{stmt}_3)}$$

Repeatedly Skolemizing and flattening,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of composition_assoc_rewrite_1.
Q.E.D.

C.213.2

Statement_Composition_Rewrites.composition_assoc_rewrite_2

Terse proof for composition_assoc_rewrite_2.

composition_assoc_rewrite_2:

$$\frac{\{1\} \quad \forall (\text{lift_stmt}_3: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt}_1, \text{stmt}_2: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{stmt}_1 \## (\text{lift}(\text{stmt}_2) \## \text{lift_stmt}_3)) = ((\text{stmt}_1 \## \text{stmt}_2) \## \text{lift_stmt}_3)}$$

Repeatedly Skolemizing and flattening,
Applying decompose-equality,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of composition_assoc_rewrite_2.
Q.E.D.

C.213.3

Statement_Composition_Rewrites.composition_assoc_rewrite_3

Terse proof for composition_assoc_rewrite_3.

composition_assoc_rewrite_3:

$$\frac{\{1\} \quad \forall (\text{lift_stmt}_2: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt}_1, \text{stmt}_3: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{stmt}_1 \## (\text{lift_stmt}_2 \## \text{stmt}_3)) = ((\text{stmt}_1 \## \text{lift_stmt}_2) \## \text{stmt}_3)}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_3`.
 Q.E.D.

C.213.4

Statement_Composition_Rewrites.composition_assoc_rewrite_4

Terse proof for `composition_assoc_rewrite_4`.

`composition_assoc_rewrite_4`:

$$\frac{\{1\} \quad \forall (\text{lift_stmt_2}, \text{lift_stmt_3}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt_1}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{stmt_1} \## (\text{lift_stmt_2} \## \text{lift_stmt_3})) = ((\text{stmt_1} \## \text{lift_stmt_2}) \## \text{lift_stmt_3})}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_4`.
 Q.E.D.

C.213.5

Statement_Composition_Rewrites.composition_assoc_rewrite_5

Terse proof for `composition_assoc_rewrite_5`.

`composition_assoc_rewrite_5`:

$$\frac{\{1\} \quad \forall (\text{lift_stmt_1}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt_2}, \text{stmt_3}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{lift_stmt_1} \## (\text{stmt_2} \## \text{stmt_3})) = ((\text{lift_stmt_1} \## \text{stmt_2}) \## \text{stmt_3})}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_5`.
 Q.E.D.

C.213.6

Statement_Composition_Rewrites.composition_assoc_rewrite_6

Terse proof for `composition_assoc_rewrite_6`.

`composition_assoc_rewrite_6`:

$$\frac{\{1\} \quad \forall (\text{lift_stmt_1}, \text{lift_stmt_3}: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt_2}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{equalities}[[\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]]]. = ((\text{lift_stmt_1} \## (\text{lift}(\text{stmt_2}) \## \text{lift_stmt_3})), ((\text{lift_stmt_1} \## \text{stmt_2}) \## \text{lift_stmt_3}))}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_6`.
 Q.E.D.

C.213.7

Statement_Composition_Rewrites.composition_assoc_rewrite_7

Terse proof for `composition_assoc_rewrite_7`.

`composition_assoc_rewrite_7`:

$$\frac{\{1\} \quad \forall (\text{lift_stmt}_1, \text{lift_stmt}_2: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]], \text{stmt}_3: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{(\text{lift_stmt}_1 \## (\text{lift_stmt}_2 \## \text{stmt}_3)) = ((\text{lift_stmt}_1 \## \text{lift_stmt}_2) \## \text{stmt}_3)}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_7`.
 Q.E.D.

C.213.8

Statement_Composition_Rewrites.composition_assoc_rewrite_8

Terse proof for `composition_assoc_rewrite_8`.

`composition_assoc_rewrite_8`:

$$\frac{\{1\} \quad \forall (\text{lift_stmt}_1, \text{lift_stmt}_2, \text{lift_stmt}_3: [\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]])}{(\text{equalities}[[\text{StmtResult}[\text{State}] \rightarrow \text{StmtResult}[\text{State}]]]. = ((\text{lift_stmt}_1 \## (\text{lift_stmt}_2 \## \text{lift_stmt}_3)), ((\text{lift_stmt}_1 \## \text{lift_stmt}_2) \## \text{lift_stmt}_3)))}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `composition_assoc_rewrite_8`.
 Q.E.D.

C.214 Proofs for Statement_Rewrites (statement-rewrites.pvs)

This theory contains no provable formal statements.

C.215 Proofs for Statements (statements.pvs)

This theory contains no provable formal statements.

C.216 Proofs for StmtResult (result.pvs)

This theory contains no provable formal statements.

C.217 Proofs for StmtResult_adt (StmtResult_adt.pvs)

This theory contains no provable formal statements.

C.218 Proofs for StmtResult_adt_map (StmtResult_adt.pvs)

This theory contains no provable formal statements.

C.219 Proofs for StmtResult_adt_reduce (StmtResult_adt.pvs)

This theory contains no provable formal statements.

C.220 Proofs for Subtype_stable (graph.pvs)

C.220.1 Subtype_stable.length_stable

Terse proof for length_stable.

length_stable:

$$\{1\} \quad \forall (P: \text{PRED}[T], l: \text{list}[T]):$$
$$\text{every}(P)(l) \supset \text{length}[(P)](l) = \text{length}[T](l)$$

By induction on l , and by repeatedly rewriting and simplifying,
This completes the proof of length_stable.
Q.E.D.

C.220.2 Subtype_stable.nth_stable_TCC1

Terse proof for nth_stable_TCC1.

nth_stable_TCC1:

$$\{1\} \quad \forall (P: \text{PRED}[T], l: \text{list}[T], n: \text{below}(\text{length}[T](l))):$$
$$\text{every}(P)(l) \supset n < \text{length}[(P)](l)$$

Repeatedly Skolemizing and flattening,
Rewriting using length_stable, matching in *,
This completes the proof of nth_stable_TCC1.
Q.E.D.

C.220.3 Subtype_stable.nth_stable

Terse proof for nth_stable.

nth_stable:

$$\frac{}{\{1\} \quad \forall (P: \text{PRED}[T], l: \text{list}[T], n: \text{below}(\text{length}(l))): \\ \text{every}(P)(l) \supset \text{nth}[(P)](l, n) = \text{nth}[T](l, n)}$$

Installing automatic rewrites from: length_stable

Inducting on l on formula 1,

we get 3 subgoals:

nth_stable.1:

$$\frac{}{\{1\} \quad \forall (P: \text{PRED}[T], n: \text{below}(\text{length}(\text{null}))) : \\ \text{every}(P)(\text{null}) \supset \text{nth}[(P)](\text{null}, n) = \text{nth}[T](\text{null}, n)}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of nth_stable.1.

nth_stable.2:

$$\frac{}{\{1\} \quad \forall (\text{cons1_var}: T, \text{cons2_var}: \text{list}[T]): \\ (\forall (P: \text{PRED}[T], n: \text{below}(\text{length}(\text{cons2_var}))) : \\ \text{every}(P)(\text{cons2_var}) \supset \text{nth}[(P)](\text{cons2_var}, n) = \text{nth}[T](\text{cons2_var}, n)) \\ \supset \\ (\forall (P: \text{PRED}[T], n: \text{below}(\text{length}(\text{cons}(\text{cons1_var}, \text{cons2_var})))) : \\ \text{every}(P)(\text{cons}(\text{cons1_var}, \text{cons2_var})) \supset \\ \text{nth}[(P)](\text{cons}(\text{cons1_var}, \text{cons2_var}), n) = \\ \text{nth}[T](\text{cons}(\text{cons1_var}, \text{cons2_var}), n))}$$

Repeatedly Skolemizing and flattening,

Expanding the definition of nth,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of every,

Applying disjunctive simplification to flatten sequent,

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of nth_stable.2.

nth_stable.3:

$$\frac{}{\{1\} \quad \forall (l: \text{list}[T], P: \text{PRED}[T], n: \text{below}(\text{length}[T](l))): \\ \text{every}(P)(l) \supset n < \text{length}[(P)](l) \\ \{2\} \quad \forall (P: \text{PRED}[T], n: \text{below}(\text{length}(l'))): \\ \text{every}(P)(l') \supset \text{nth}[(P)](l', n) = \text{nth}[T](l', n)}$$

Hiding formulas: 2,

Repeatedly Skolemizing and flattening,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of nth_stable.3.

Q.E.D.

C.221 Proofs for SuperResult (result.pvs)

This theory contains no provable formal statements.

C.222 Proofs for SuperResult_adt (SuperResult_adt.pvs)

This theory contains no provable formal statements.

C.223 Proofs for SuperResult_adt_map (SuperResult_adt.pvs)

This theory contains no provable formal statements.

C.224 Proofs for SuperResult_adt_reduce (SuperResult_adt.pvs)

This theory contains no provable formal statements.

C.225 Proofs for Super_Embedding (result.pvs)

This theory contains no provable formal statements.

C.226 Proofs for Super_Embedding_Expr (result.pvs)

C.226.1 Super_Embedding_Expr.expr_2_super_res_TCC1

Terse proof for `expr_2_super_res_TCC1`.

`expr_2_super_res_TCC1`:

$$\{1\} \quad \forall (\text{expr}: \text{ExprResult}[\text{State}, \text{Data}]):$$
$$\text{OK}?(\text{expr}) \supset \text{OK}?[\text{State}, \text{Data}](\text{expr}) \vee \text{Exception}?[\text{State}, \text{Data}](\text{expr})$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `expr_2_super_res_TCC1`.
Q.E.D.

C.226.2 Super_Embedding_Expr.expr_2_super_res_TCC2

Terse proof for `expr_2_super_res_TCC2`.

`expr_2_super_res_TCC2`:

$$\{1\} \quad \forall (\text{expr}: \text{ExprResult}[\text{State}, \text{Data}]):$$
$$\text{has_next_state}(\text{expr}) \wedge \neg \text{OK}?(\text{expr}) \supset$$
$$\text{OK}?[\text{State}, \text{Data}](\text{expr}) \vee \text{Exception}?[\text{State}, \text{Data}](\text{expr})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `expr_2_super_res_TCC2`.

Q.E.D.

C.227 Proofs for Super_Embedding_Stmt (result.pvs)

C.227.1 Super_Embedding_Stmt.stmt_2_super_res_TCC1

Terse proof for `stmt_2_super_res_TCC1`.

`stmt_2_super_res_TCC1`:

$\{1\} \quad \forall (\text{stmt} : \text{StmtResult}[\text{State}]):$ $\text{OK?}(\text{stmt}) \supset$ $\text{OK?}[\text{State}](\text{stmt}) \vee$ $\text{Break?}[\text{State}](\text{stmt}) \vee$ $\text{Continue?}[\text{State}](\text{stmt}) \vee$ $\text{Return?}[\text{State}](\text{stmt}) \vee$ $\text{Switch?}[\text{State}](\text{stmt}) \vee \text{Default?}[\text{State}](\text{stmt}) \vee \text{Exception?}[\text{State}](\text{stmt})$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_2_super_res_TCC1`.

Q.E.D.

C.227.2 Super_Embedding_Stmt.stmt_2_super_res_TCC2

Terse proof for `stmt_2_super_res_TCC2`.

`stmt_2_super_res_TCC2`:

$\{1\} \quad \forall (\text{stmt} : \text{StmtResult}[\text{State}]):$ $\text{has_next_state}(\text{stmt}) \wedge \neg \text{OK?}(\text{stmt}) \supset$ $\text{OK?}[\text{State}](\text{stmt}) \vee$ $\text{Break?}[\text{State}](\text{stmt}) \vee$ $\text{Continue?}[\text{State}](\text{stmt}) \vee$ $\text{Return?}[\text{State}](\text{stmt}) \vee$ $\text{Switch?}[\text{State}](\text{stmt}) \vee \text{Default?}[\text{State}](\text{stmt}) \vee \text{Exception?}[\text{State}](\text{stmt})$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `stmt_2_super_res_TCC2`.

Q.E.D.

C.228 Proofs for Super_Result_Util (result.pvs)

This theory contains no provable formal statements.

C.229 Proofs for Transformer_Invariant (state-transformer.pvs)

C.229.1 Transformer_Invariant.result_pred_TCC1

Terse proof for result_pred_TCC1.

result_pred_TCC1:

$$\{1\} \quad \forall (\text{res}: \text{SuperResult}[\text{State}]):$$

$$\text{has_next_state}(\text{res}) \supset \text{OK?}[\text{State}](\text{res}) \vee \text{abnormal?}[\text{State}](\text{res})$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of result_pred_TCC1.

Q.E.D.

C.229.2

Transformer_Invariant.super_transformer_invariant_next_ok_TCC1

Terse proof for super_transformer_invariant_next_ok_TCC1.

super_transformer_invariant_next_ok_TCC1:

$$\{1\} \quad \forall (\text{states}: \text{PRED}[\text{State}], \text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State},$$

$$q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$$
$$\text{transformer_invariant?}(\text{states}, \text{transformers}) \wedge$$
$$\text{states}(s) \wedge \text{transformers}(q) \wedge \text{has_next_state}(q(s))$$
$$\supset \text{OK?}[\text{State}](q(s)) \vee \text{abnormal?}[\text{State}](q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of super_transformer_invariant_next_ok_TCC1.

Q.E.D.

C.229.3 Transformer_Invariant.super_transformer_invariant_next_ok

Terse proof for super_transformer_invariant_next_ok.

super_transformer_invariant_next_ok:

$$\{1\} \quad \forall (\text{states}: \text{PRED}[\text{State}], \text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State},$$

$$q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$$
$$\text{transformer_invariant?}(\text{states}, \text{transformers}) \wedge$$
$$\text{states}(s) \wedge \text{transformers}(q) \wedge \text{has_next_state}(q(s))$$
$$\supset \text{states}(\text{state}(q(s)))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of super_transformer_invariant_next_ok.

Q.E.D.

C.229.4**Transformer_Invariant.transformer_invariant_mono_transformers**

Terse proof for transformer_invariant_mono_transformers.

transformer_invariant_mono_transformers:

$\{1\} \quad \forall (\text{states}: \text{PRED}[\text{State}],$ $\quad \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]):$ $(\text{transformers}_1 \subseteq \text{transformers}_2) \wedge \text{transformer_invariant?}(\text{states}, \text{transformers}_2) \supset$ $\text{transformer_invariant?}(\text{states}, \text{transformers}_1)$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of transformer_invariant_mono_transformers.

Q.E.D.

C.229.5**Transformer_Invariant.transformer_invariant_union_transformers**

Terse proof for transformer_invariant_union_transformers.

transformer_invariant_union_transformers:

$\{1\} \quad \forall (\text{states}: \text{PRED}[\text{State}],$ $\quad \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]):$ $\text{transformer_invariant?}(\text{states}, \text{transformers}_1) \wedge$ $\text{transformer_invariant?}(\text{states}, \text{transformers}_2)$ $\supset \text{transformer_invariant?}(\text{states}, (\text{transformers}_1 \cup \text{transformers}_2))$
--

Installing automatic rewrites from: member

Repeatedly Skolemizing and flattening,

Expanding the definition of transformer_invariant?,

Repeatedly Skolemizing and flattening,

Expanding the definition of union,

Splitting conjunctions,

we get 2 subgoals:

transformer_invariant_union_transformers.1:

$\{-1\} \quad (q' \in \text{transformers}'_1)$ $\{-2\} \quad \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\quad \text{states}'(s) \wedge \text{transformers}'(q) \supset \text{result_pred}(\text{states}'(q(s)))$ $\{-3\} \quad \forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\quad \text{states}'(s) \wedge \text{transformers}''(q) \supset \text{result_pred}(\text{states}'(q(s)))$ $\{-4\} \quad \text{states}'(s')$ <hr/> $\{1\} \quad \text{result_pred}(\text{states}'(q'(s')))$

Instantiating quantified variables,

Simplifying, rewriting, and recording with decision procedures,

This completes the proof of transformer_invariant_union_transformers.1.

`transformer_invariant_union_transformers.2:`

<div style="display: flex; flex-direction: column; gap: 5px;"> <div style="border-bottom: 1px solid black; padding: 2px 5px;">{-1} $(q' \in \text{transformers}'')$</div> <div style="padding: 2px 5px;">{-2} $\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}'(q) \supset \text{result_pred}(\text{states}')(q(s))$</div> <div style="padding: 2px 5px;">{-3} $\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}''(q) \supset \text{result_pred}(\text{states}')(q(s))$</div> <div style="padding: 2px 5px;">{-4} $\text{states}'(s')$</div> </div>	<div style="border-top: 1px solid black; border-left: 1px solid black; border-right: 1px solid black; padding: 5px;"> <div style="border-bottom: 1px solid black; padding: 2px 5px;">{1} $\text{result_pred}(\text{states}')(q'(s'))$</div> </div>
--	--

Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
This completes the proof of `transformer_invariant_union_transformers.2`.
Q.E.D.

C.229.6 Transformer_Invariant.transformer_invariant_truth

Terse proof for `transformer_invariant_truth`.

`transformer_invariant_truth:`

<div style="border-bottom: 1px solid black; padding: 2px 5px;">{1} $\forall (\text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformer_invariant}?(fullset[\text{State}], \text{transformers})$</div>	<div style="border-top: 1px solid black; border-left: 1px solid black; border-right: 1px solid black; padding: 5px;"> <div style="border-bottom: 1px solid black; padding: 2px 5px;">{1} $\forall (\text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformer_invariant}?(fullset[\text{State}], \text{transformers})$</div> </div>
--	---

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `transformer_invariant_truth`.
Q.E.D.

C.229.7

Transformer_Invariant.transformer_invariant_all_transformers

Terse proof for `transformer_invariant_all_transformers`.

`transformer_invariant_all_transformers:`

<div style="border-bottom: 1px solid black; padding: 2px 5px;">{1} $\forall (\text{states}: \text{PRED}[\text{State}], \text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $(\forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformers}(q) \supset \text{transformer_invariant}?(states, singleton(q))$ $\supset \text{transformer_invariant}?(states, \text{transformers})$</div>	<div style="border-top: 1px solid black; border-left: 1px solid black; border-right: 1px solid black; padding: 5px;"> <div style="border-bottom: 1px solid black; padding: 2px 5px;">{1} $\forall (\text{states}: \text{PRED}[\text{State}], \text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $(\forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformers}(q) \supset \text{transformer_invariant}?(states, singleton(q))$ $\supset \text{transformer_invariant}?(states, \text{transformers})$</div> </div>
--	---

Expanding the definition of `transformer_invariant?`,
Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Simplifying, rewriting, and recording with decision procedures,
Instantiating quantified variables,
Expanding the definition of `singleton`,
which is trivially true.
This completes the proof of `transformer_invariant_all_transformers`.
Q.E.D.

C.229.8 Transformer_Invariant.super_transformers_ok_ok

Terse proof for `super_transformers_ok_ok`.

super_transformers_ok_ok:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]): \\ \text{transformers_ok?}(\text{states}, \text{transformers}) \wedge \text{states}(s) \wedge \text{transformers}(q) \supset \text{OK?}(q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of super_transformers_ok_ok.
Q.E.D.

C.229.9 Transformer_Invariant.transformers_ok_mono_transformers

Terse proof for transformers_ok_mono_transformers.

transformers_ok_mono_transformers:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \\ \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ (\text{transformers}_1 \subseteq \text{transformers}_2) \wedge \text{transformers_ok?}(\text{states}, \text{transformers}_2) \supset \\ \text{transformers_ok?}(\text{states}, \text{transformers}_1)$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of transformers_ok_mono_transformers.
Q.E.D.

C.229.10 Transformer_Invariant.transformers_ok_mono_states

Terse proof for transformers_ok_mono_states.

transformers_ok_mono_states:

$$\{1\} \quad \forall (\text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], \text{states}_1, \text{states}_2: \text{PRED}[\text{State}]): \\ (\text{states}_1 \subseteq \text{states}_2) \wedge \text{transformers_ok?}(\text{states}_2, \text{transformers}) \supset \\ \text{transformers_ok?}(\text{states}_1, \text{transformers})$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of transformers_ok_mono_states.
Q.E.D.

C.229.11 Transformer_Invariant.transformers_ok_union_transformers

Terse proof for transformers_ok_union_transformers.

transformers_ok_union_transformers:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \\ \text{transformers}_1, \text{transformers}_2: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]): \\ \text{transformers_ok?}(\text{states}, \text{transformers}_1) \wedge \text{transformers_ok?}(\text{states}, \text{transformers}_2) \supset \\ \text{transformers_ok?}(\text{states}, (\text{transformers}_1 \cup \text{transformers}_2))$$

Installing automatic rewrites from: member
Repeatedly Skolemizing and flattening,
Expanding the definition of transformers_ok?,

C Proof scripts

Repeatedly Skolemizing and flattening,
 Expanding the definition of union,
 Splitting conjunctions,
 we get 2 subgoals:

`transformers_ok_union_transformers.1:`

{-1}	$(q' \in \text{transformers}')$
{-2}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}'(q) \supset \text{OK?}(q(s))$
{-3}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}''(q) \supset \text{OK?}(q(s))$
{-4}	$\text{states}'(s')$
{1} $\text{OK?}(q'(s'))$	

Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `transformers_ok_union_transformers.1`.
`transformers_ok_union_transformers.2:`

{-1}	$(q' \in \text{transformers}'')$
{-2}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}'(q) \supset \text{OK?}(q(s))$
{-3}	$\forall (s: \text{State}, q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{states}'(s) \wedge \text{transformers}''(q) \supset \text{OK?}(q(s))$
{-4}	$\text{states}'(s')$
{1} $\text{OK?}(q'(s'))$	

Instantiating quantified variables,
 Simplifying, rewriting, and recording with decision procedures,
 This completes the proof of `transformers_ok_union_transformers.2`.
 Q.E.D.

C.229.12 Transformer_Invariant.transformers_ok_all_transformers

Terse proof for `transformers_ok_all_transformers`.

`transformers_ok_all_transformers:`

{1}	$\forall (\text{states}: \text{PRED}[\text{State}], \text{transformers}: \text{PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]]):$ $(\forall (q: [\text{State} \rightarrow \text{SuperResult}[\text{State}]]):$ $\text{transformers}(q) \supset \text{transformers_ok?}(\text{states}, \text{singleton}(q))$ $\supset \text{transformers_ok?}(\text{states}, \text{transformers}))$
-----	--

Expanding the definition of `transformers_ok?`,
 Repeatedly Skolemizing and flattening,
 Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Instantiating quantified variables,
 Expanding the definition of `singleton`,
 which is trivially true.
 This completes the proof of `transformers_ok_all_transformers`.
 Q.E.D.

C.230 Proofs for Transformer_Invariant_2 (state-transformer.pvs)

C.230.1

Transformer_Invariant_2.expr_transformer_invariant_next_ok_TCC1

Terse proof for `expr_transformer_invariant_next_ok_TCC1`.

`expr_transformer_invariant_next_ok_TCC1`:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]): \\ \text{transformer_invariant?}(\text{states}, \text{transformers}) \wedge \\ \text{states}(s) \wedge \text{transformers}(\text{expr_2_super}(q)) \wedge \text{has_next_state}(q(s)) \\ \supset \text{OK?}[\text{State}, \text{Data}](q(s)) \vee \text{Exception?}[\text{State}, \text{Data}](q(s))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `expr_transformer_invariant_next_ok_TCC1`.
Q.E.D.

C.230.2 Transformer_Invariant_2.expr_transformer_invariant_next_ok

Terse proof for `expr_transformer_invariant_next_ok`.

`expr_transformer_invariant_next_ok`:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]): \\ \text{transformer_invariant?}(\text{states}, \text{transformers}) \wedge \\ \text{states}(s) \wedge \text{transformers}(\text{expr_2_super}(q)) \wedge \text{has_next_state}(q(s)) \\ \supset \text{states}(\text{state}(q(s)))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `expr_transformer_invariant_next_ok`.
Q.E.D.

C.230.3 Transformer_Invariant_2.expr_transformers_ok_ok

Terse proof for `expr_transformers_ok_ok`.

`expr_transformers_ok_ok`:

$$\{1\} \quad \forall (\text{states: PRED}[\text{State}], \text{transformers: PRED}[[\text{State} \rightarrow \text{SuperResult}[\text{State}]]], s: \text{State}, \\ q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]): \\ \text{transformers_ok?}(\text{states}, \text{transformers}) \wedge \text{states}(s) \wedge \text{transformers}(\text{expr_2_super}(q)) \supset \\ \text{OK?}(q(s))$$

Repeatedly Skolemizing and flattening,
Using lemma `super_transformers_ok_ok[State]`,

C Proof scripts

Simplifying, rewriting, and recording with decision procedures,
Rewriting using `ok_expr_2_super`, matching in *,
This completes the proof of `expr_transformers_ok_ok`.
Q.E.D.

C.230.4 Transformer_Invariant_2.expr_result_pred_next_state_TCC1

Terse proof for `expr_result_pred_next_state_TCC1`.

`expr_result_pred_next_state_TCC1`:

$$\{1\} \quad \forall (states: \text{PRED}[\text{State}], s: \text{State}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]):$$

$$\text{has_next_state}(q(s)) \wedge \text{result_pred}(states)(\text{expr_2_super}(q)(s)) \supset$$
$$\text{OK}?[\text{State}, \text{Data}](q(s)) \vee \text{Exception}?[\text{State}, \text{Data}](q(s))$$

Repeatedly Skolemizing and flattening,
Expanding the definition of `has_next_state`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
This completes the proof of `expr_result_pred_next_state_TCC1`.
Q.E.D.

C.230.5 Transformer_Invariant_2.expr_result_pred_next_state

Terse proof for `expr_result_pred_next_state`.

`expr_result_pred_next_state`:

$$\{1\} \quad \forall (states: \text{PRED}[\text{State}], s: \text{State}, q: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]]):$$

$$\text{has_next_state}(q(s)) \wedge \text{result_pred}(states)(\text{expr_2_super}(q)(s)) \supset$$
$$\text{states}(\text{state}(q(s)))$$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `expr_result_pred_next_state`.
Q.E.D.

C.231 Proofs for Transformer_Invariant_3 (state-transformer.pvs)

C.231.1 Transformer_Invariant_3.fexpr_composition_transformers_ok

Terse proof for `fexpr_composition_transformers_ok`.

`fexpr_composition_transformers_ok`:

$$\{1\} \quad \forall (\text{expr1}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data1}]],$$

$$\text{fexpr}: [\text{Data1} \rightarrow [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data2}]]], \text{states}: \text{PRED}[\text{State}],$$
$$P: \text{PRED}[\text{Data1}]):$$
$$(\text{transformers_ok}?(states, \text{singleton}(\text{expr_2_super}(\text{expr1}))) \wedge$$
$$\text{transformer_invariant}?(states, \text{singleton}(\text{expr_2_super}(\text{expr1}))) \wedge$$
$$(\forall (s: (states)): \text{OK}?(expr1(s)) \supset P(\text{data}(\text{expr1}(s)))) \wedge$$
$$(\forall (d: (P)):$$
$$\text{transformers_ok}?(states, \text{singleton}(\text{expr_2_super}(\text{fexpr}(d))))))$$
$$\supset \text{transformers_ok}?(states, \text{singleton}(\text{expr_2_super}(\text{expr1} \#\# \text{fexpr})))$$

Expanding the definition of transformers_ok?,
 Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: singleton ## expr_2_super expr_2_super_res
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Replacing using formula -6,
 Hiding formulas: -6,
 Instantiating quantified variables,
 Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Instantiating the top quantifier in -5 with the terms: (data(expr1!1(s!1))),
 Instantiating the top quantifier in -5 with the terms: (state(expr1!1(s!1)) expr_2_super(fexpr!1(data(expr1!1(s!1))))),
 we get 2 subgoals:
fexpr_composition_transformers_ok.1:

{-1}	states'(s')
{-2}	OK?(expr_2_super_res(expr1'(s')))
{-3}	transformer_invariant?(states', singleton(expr_2_super(expr1')))
{-4}	P'(data(expr1'(s')))
{-5}	states'(state(expr1'(s'))) \supset OK?(expr_2_super(fexpr'(data(expr1'(s'))))(state(expr1'(s'))))
{1} OK?(expr_2_super_res((expr1' ## fexpr')(s')))	

Expanding the definition of ##,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma expr_transformer_invariant_next_ok,
 Installing automatic rewrites from: has_next_state
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of fexpr_composition_transformers_ok.1.
fexpr_composition_transformers_ok.2:

{-1}	states'(s')

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of fexpr_composition_transformer_invariant.2.
 Q.E.D.

C.231.4

Transformer_Invariant_3.expr_composition_transformer_invariant

Terse proof for expr_composition_transformer_invariant.

expr_composition_transformer_invariant:

<p>{1} $\forall (expr1: [State \rightarrow ExprResult[State, Data1]],$ $expr2: [State \rightarrow ExprResult[State, Data2]], states: PRED[State]):$ $transformer_invariant?(states, singleton(expr_2_super(expr1))) \wedge$ $transformer_invariant?(states, singleton(expr_2_super(expr2)))$ $\supset transformer_invariant?(states, singleton(expr_2_super(expr1 \#\# expr2)))$</p>	<hr style="border: 0.5px solid black;"/>
--	--

Repeatedly Skolemizing and flattening,
 Using lemma fexpr_composition_transformer_invariant,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Expanding the definition of ##,
 Expanding the definition of ##,
 which is trivially true.
 This completes the proof of expr_composition_transformer_invariant.
 Q.E.D.

C.232 Proofs for Transformer_Super_Embedding (state-transformer.pvs)

This theory contains no provable formal statements.

C.233 Proofs for Transformer_Super_Embedding_Expr (state-transformer.pvs)

C.233.1 Transformer_Super_Embedding_Expr.ok_expr_2_super

Terse proof for ok_expr_2_super.

ok_expr_2_super:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$ $\text{OK}?(\text{expr_2_super}(\text{expr})(s)) = \text{OK}?(\text{expr}(s))$
--

This completes the proof of ok_expr_2_super.

Q.E.D.

C.233.2

Transformer_Super_Embedding_Expr.has_next_state_expr_2_super

Terse proof for has_next_state_expr_2_super.

has_next_state_expr_2_super:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$ $\text{has_next_state}(\text{expr_2_super}(\text{expr})(s)) = \text{has_next_state}(\text{expr}(s))$
--

This completes the proof of has_next_state_expr_2_super.

Q.E.D.

C.233.3

Transformer_Super_Embedding_Expr.state_expr_2_super_TCC1

Terse proof for state_expr_2_super_TCC1.

state_expr_2_super_TCC1:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$ $\text{has_next_state}(\text{expr}(s)) \supset$ $\text{OK}?[\text{State}](\text{expr_2_super}(\text{expr})(s)) \vee \text{abnormal}?[\text{State}](\text{expr_2_super}(\text{expr})(s))$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of state_expr_2_super_TCC1.

Q.E.D.

C.233.4

Transformer_Super_Embedding_Expr.state_expr_2_super_TCC2

Terse proof for state_expr_2_super_TCC2.

state_expr_2_super_TCC2:

$\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):$ $\text{has_next_state}(\text{expr}(s)) \supset$ $\text{OK}?[\text{State}, \text{Data}](\text{expr}(s)) \vee \text{Exception}?[\text{State}, \text{Data}](\text{expr}(s))$
--

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of state_expr_2_super_TCC2.

Q.E.D.

C.233.5 Transformer_Super_Embedding_Expr.state_expr_2_super

Terse proof for state_expr_2_super.

state_expr_2_super:

$$\frac{\{1\} \quad \forall (\text{expr}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{Data}]], s: \text{State}):}{\text{has_next_state}(\text{expr}(s)) \supset \text{state}(\text{expr_2_super}(\text{expr})(s)) = \text{state}(\text{expr}(s))}$$

This completes the proof of state_expr_2_super.
Q.E.D.

C.234 Proofs for Transformer_Super_Embedding_Stmt (state-transformer.pvs)

C.234.1 Transformer_Super_Embedding_Stmt.ok_stmt_2_super

Terse proof for ok_stmt_2_super.

ok_stmt_2_super:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{OK?}(\text{stmt_2_super}(\text{stmt})(s)) = \text{OK?}(\text{stmt}(s))}$$

This completes the proof of ok_stmt_2_super.
Q.E.D.

C.234.2

Transformer_Super_Embedding_Stmt.has_next_state_stmt_2_super

Terse proof for has_next_state_stmt_2_super.

has_next_state_stmt_2_super:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{has_next_state}(\text{stmt_2_super}(\text{stmt})(s)) = \text{has_next_state}(\text{stmt}(s))}$$

This completes the proof of has_next_state_stmt_2_super.
Q.E.D.

C.234.3

Transformer_Super_Embedding_Stmt.state_stmt_2_super_TCC1

Terse proof for state_stmt_2_super_TCC1.

state_stmt_2_super_TCC1:

$$\frac{\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]])}{\text{has_next_state}(\text{stmt}(s)) \supset \text{OK?}[\text{State}](\text{stmt_2_super}(\text{stmt})(s)) \vee \text{abnormal?}[\text{State}](\text{stmt_2_super}(\text{stmt})(s))}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `state_stmt_2_super_TCC1`.
Q.E.D.

C.234.4

Transformer_Super_Embedding Stmt.state_stmt_2_super_TCC2

Terse proof for `state_stmt_2_super_TCC2`.

`state_stmt_2_super_TCC2`:

```
{1}  ∀ (s: State, stmt: [State → StmtResult [State]]):
      has_next_state(stmt(s)) ⊃
      OK?[State](stmt(s)) ∨
      Break?[State](stmt(s)) ∨
      Continue?[State](stmt(s)) ∨
      Return?[State](stmt(s)) ∨
      Switch?[State](stmt(s)) ∨
      Default?[State](stmt(s)) ∨ Exception?[State](stmt(s))
```

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `state_stmt_2_super_TCC2`.
Q.E.D.

C.234.5 Transformer_Super_Embedding Stmt.state_stmt_2_super

Terse proof for `state_stmt_2_super`.

`state_stmt_2_super`:

```
{1}  ∀ (s: State, stmt: [State → StmtResult [State]]):
      has_next_state(stmt(s)) ⊃ state(stmt_2_super(stmt)(s)) = state(stmt(s))
```

This completes the proof of `state_stmt_2_super`.
Q.E.D.

C.235 Proofs for UnaryExpressions (expressions.pvs)

C.235.1 UnaryExpressions.deref_TCC1

Terse proof for `deref_TCC1`.

`deref_TCC1`:

```
{1}  ∀ ((p_typ: Cpp_Subtype(cv(pointer?))): pointer?(cv_base(p_typ))
```

Repeatedly Skolemizing and flattening,
Rewriting using `cv_base_result`, matching in `*`,
Keeping (1) and hiding `*`,
Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `deref_TCC1`.
Q.E.D.

C.235.2 UnaryExpressions.arrow_TCC1

Terse proof for arrow_TCC1.

arrow_TCC1:

<pre>{1} ∀ (t: Cpp_Type): pointer?(t) ⊃ array?(t) ∨ pointer?(t) ∨ reference?(t) ∨ bitfield?(t) ∨ enum?(t) ∨ pointer_to_member?(t) ∨ const?(t) ∨ volatile?(t)</pre>

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of arrow_TCC1.

Q.E.D.

C.235.3 UnaryExpressions.arrow_TCC2

Terse proof for arrow_TCC2.

arrow_TCC2:

<pre>{1} ∀ ((p_typ: Cpp_Subtype(cv(extend[Cpp_Type_, Cpp_Type, bool, FALSE] (λ (t: Cpp_Type): pointer?(t) ∧ (class?(typ(t)) ∨ union?(typ(t)))))))): cv(pointer?)(p_typ)</pre>
--

Repeatedly Skolemizing and flattening,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of arrow_TCC2.

Q.E.D.

C.235.4 UnaryExpressions.unary_minus_TCC1

Terse proof for unary_minus_TCC1.

unary_minus_TCC1:

<pre>{1} ∀ (typ: Cpp_Subtype(cv(extend[Cpp_Type_, Cpp_Type, bool, FALSE] ({t: Cpp_Type (char?(t) ∨ wchar_t?(t) ∨ signed_integer?(t)})))): n: (range(typ)): cv(non_bool_integral_enum?)(typ)</pre>

Repeatedly Skolemizing and flattening,

Keeping (-2 1) and hiding *,

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of unary_minus_TCC1.

Q.E.D.

C.235.5 UnaryExpressions.unary_minus_TCC2

Terse proof for unary_minus_TCC2.

unary_minus_TCC2:

$\{1\} \quad \forall (\text{typ}: \text{Cpp_Subtype}(\text{cv}(\text{extend}[\text{Cpp_Type}_, \text{Cpp_Type}, \text{bool}, \text{FALSE}] (\{t: \text{Cpp_Type} \mid (\text{char}? (t) \vee \text{wchar_t}? (t) \vee \text{signed_integer}? (t))\}))))): \text{cv}(\text{non_bool_integral_enum}?)(\text{typ})$
--

Repeatedly Skolemizing and flattening,
 Keeping (-2 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unary_minus_TCC2.
 Q.E.D.

C.235.6 UnaryExpressions.unary_minus_unsigned_TCC1

Terse proof for unary_minus_unsigned_TCC1.

unary_minus_unsigned_TCC1:

$\{1\} \quad \forall (\text{typ}: \text{Cpp_Subtype}(\text{cv}(\text{unsigned_integer}?)), n: (\text{range}(\text{typ}))) : \text{cv}(\text{non_bool_integral_enum}?)(\text{typ})$

Repeatedly Skolemizing and flattening,
 Keeping (-2 1) and hiding *,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unary_minus_unsigned_TCC1.
 Q.E.D.

C.235.7 UnaryExpressions.unary_minus_unsigned_TCC2

Terse proof for unary_minus_unsigned_TCC2.

unary_minus_unsigned_TCC2:

$\{1\} \quad \forall (\text{typ}: \text{Cpp_Subtype}(\text{cv}(\text{unsigned_integer}?))) : \text{cv}(\text{non_bool_integral_enum}?)(\text{typ})$
--

Repeatedly Skolemizing and flattening,
 Hiding formulas: -1,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of unary_minus_unsigned_TCC2.
 Q.E.D.

C.235.8 UnaryExpressions.preinc_TCC1

Terse proof for preinc_TCC1.

preinc_TCC1:

$\{1\} \quad \forall ((\text{typ}: \text{Cpp_Subtype}(v(\text{non_bool_integral}?)))) : \text{cv}(\text{non_bool_integral_enum}?)(\text{typ})$
--

Repeatedly Skolemizing and flattening,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `preinc_TCC1`.
 Q.E.D.

C.235.9 UnaryExpressions.sizeof_TCC1

Terse proof for `sizeof_TCC1`.

`sizeof_TCC1`:

{1}	$\text{Cpp_Type?}(\text{uint}) \wedge \text{cv}(\text{non_bool_integral_enum?})(\text{uint})$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 Expanding the definition of `Cpp_Type?`,
 Repeatedly Skolemizing and flattening,
 Expanding the definition of subterm,
 Replacing using formula -1,
 Installing automatic rewrites from: `no_pointers_to_bitfield?` `no_pointers_to_references?`
`no_cv_references?` `no_reference_to_reference?` `no_reference_to_bitfields?` `no_pointer_to_member_to_reference?`
`no_pointer_to_member_to_cv_void?` `no_cv_void_parameter?` `no_array_of_references?` `no_array_of_bitfields?`
`no_array_of_cv_void?` `no_array_of_function?` `no_array_of_abstract_class?` `no_pointer_or_ref_to_incomplete_array_parameter?`
`no_array_return_type?` `no_function_return_type?` `bitfield_underlying_integral_or_enum_type?` `cv_array?`
`enum_underlying_integral?` `enum_constants?` `const_volatile?` `const_stutter?` `volatile_stutter?`
`no_cv_class?` `no_cv_union?` `no_cv_function?` `no_reference_to_void?` `no_cv_void?`

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `sizeof_TCC1`.
 Q.E.D.

C.236 Proofs for Uninterpreted_Data (abstract_data.pvs)

C.236.1 Uninterpreted_Data.u_data_type_length

Terse proof for `u_data_type_length`.

`u_data_type_length`:

{1}	$\forall (\text{uidt}: (\text{uninterpreted_data_type?}), l: \text{list}[\text{Byte}], a: \text{Address}):$ $\text{valid?}(\text{uidt})(l, a) \supset \text{length}(l) = \text{size}(\text{uidt})$
-----	---

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `u_data_type_length`.
 Q.E.D.

C.237 Proofs for Unit (vfiasco-prelude.pvs)

This theory contains no provable formal statements.

C.238 Proofs for Unit_adt (Unit_adt.pvs)

This theory contains no provable formal statements.

C.239 Proofs for Unit_adt_reduce (Unit_adt.pvs)

This theory contains no provable formal statements.

C.240 Proofs for While_Hoare (statement-rewrites.pvs)

C.240.1 While_Hoare.iterate_while_right

Terse proof for `iterate_while_right`.

`iterate_while_right`:

$$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], n: nat):$$

$$\text{iterate_while}(1 + n, b_ex, body) =$$

$$\text{iterate_while}(n, b_ex, body) \## \text{lift}(e2s(b_ex)) \## \text{body} \## \text{catch_continue}$$

Installing automatic rewrites from: `erplus_ax erminus_ax extended_real_superset_of_number_fields`

Inducting on `n` on formula 1,

we get 2 subgoals:

`iterate_while_right.1`:

$$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]]):$$

$$\text{iterate_while}(1 + 0, b_ex, body) =$$

$$\text{iterate_while}(0, b_ex, body) \## \text{lift}(e2s(b_ex)) \## \text{body} \## \text{catch_continue}$$

Repeatedly Skolemizing and flattening,

Applying `decompose-equality`,

Trying repeated skolemization, instantiation, and if-lifting,

Applying eta axiom scheme to `body!1(state(b_ex!1(x!1)))`,

This completes the proof of `iterate_while_right.1`.

`iterate_while_right.2`:

$$\{1\} \quad \forall j:$$

$$(\forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]]):$$

$$\text{iterate_while}(1 + j, b_ex, body) =$$

$$\text{iterate_while}(j, b_ex, body) \## \text{lift}(e2s(b_ex)) \## \text{body} \## \text{catch_continue}))$$

$$\supset$$

$$(\forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]]):$$

$$\text{iterate_while}(1 + j + 1, b_ex, body) =$$

$$\text{iterate_while}(j + 1, b_ex, body) \##$$

$$\text{lift}(e2s(b_ex)) \## \text{body} \## \text{catch_continue}))$$

Repeatedly Skolemizing and flattening,

Instantiating quantified variables,

Expanding the definition of `iterate_while`,

Expanding the definition of `##`,

Applying `decompose-equality`,

Expanding the definition of `lift`,

Replacing using formula -2,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `iterate_while_right.2`.

Q.E.D.

C.240.2 While_Hoare.while_variant?_TCC1

Terse proof for `while_variant?_TCC1`.

while_variant?_TCC1:

```

{1}  ∇ (b_ex: [State → ExprResult [State, bool]], body: [State → StmtResult [State]],
      <: PRED[[Ord, Ord]], variant: [State → Ord], Q: PRED[StmtResult [State]]):
while_invariant?(b_ex, body)(Q, Q) ∧ well_founded?(<) ⊃
  (∇ (s: State):
    Q(OK(s)) ∧
    OK?(b_ex(s)) ∧
    data(b_ex(s)) ∧ OK?((e2s(b_ex) ## body ## catch_continue)(s))
  ) ⊃
  OK?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Break?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Continue?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Return?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Switch?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Default?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))
  ∨
  Exception?[State]
  ((##[State]
    (##[State](e2s[State, boolean](b_ex), body),
    catch_continue[State]))
  (s))

```

Repeatedly Skolemizing and flattening,
 This completes the proof of `while_variant?_TCC1`.
 Q.E.D.

C.240.3 While_Hoare.while_no_cb_TCC1

Terse proof for `while_no_cb_TCC1`.

`while_no_cb_TCC1`:

$$\frac{\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], s: State):}{(\exists (n: nat): while_termination_point?(b_ex, body, s)(n)) \supset nonempty?[nat](while_termination_point?[State](b_ex, body, s))}$$

Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `while_no_cb_TCC1`.
 Q.E.D.

C.240.4 While_Hoare.while_no_cb_cb_while

Terse proof for `while_no_cb_cb_while`.

`while_no_cb_cb_while`:

$$\frac{\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]]):}{while(b_ex, body) = (while_no_cb(b_ex, body) \#\# catch_break)}$$

Repeatedly Skolemizing and flattening,
 Applying decompose-equality,
 Expanding the definition of `while`,
 Expanding the definition of `while_no_cb`,
 Trying repeated skolemization, instantiation, and if-lifting,
 This completes the proof of `while_no_cb_cb_while`.
 Q.E.D.

C.240.5 While_Hoare.iterate_while_invariant

Terse proof for `iterate_while_invariant`.

`iterate_while_invariant`:

$$\frac{\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], s_0: State, inv_abnorm?, inv_norm?: PRED[StmtResult[State]], n: nat):}{(while_invariant?(b_ex, body)(inv_abnorm?, inv_norm?) \wedge inv_abnorm?(OK(s_0)) \wedge (\forall (m: nat): m < n \supset \neg while_termination_point?(b_ex, body, s_0)(m))) \supset inv_abnorm?(iterate_while(n, b_ex, body)(s_0))}$$

Inducting on `n` on formula 1,
 we get 2 subgoals:

iterate_while_invariant.1:

$\{1\} \quad \forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], s_0: State, inv_abnorm?, inv_norm?: PRED[StmtResult[State]]):$ $(while_invariant?(b_ex, body)(inv_abnorm?, inv_norm?) \wedge$ $inv_abnorm?(OK(s_0)) \wedge$ $(\forall (m: nat): m < 0 \supset \neg while_termination_point?(b_ex, body, s_0)(m)))$ $\supset inv_abnorm?(iterate_while(0, b_ex, body)(s_0))$

Trying repeated skolemization, instantiation, and if-lifting,
This completes the proof of `iterate_while_invariant.1`.

iterate_while_invariant.2:

$\{1\} \quad \forall j:$ $(\forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], s_0: State, inv_abnorm?, inv_norm?: PRED[StmtResult[State]]):$ $(while_invariant?(b_ex, body)(inv_abnorm?, inv_norm?) \wedge$ $inv_abnorm?(OK(s_0)) \wedge$ $(\forall (m: nat): m < j \supset \neg while_termination_point?(b_ex, body, s_0)(m)))$ $\supset inv_abnorm?(iterate_while(j, b_ex, body)(s_0)))$ \supset $(\forall (b_ex: [State \rightarrow ExprResult[State, bool]], body: [State \rightarrow StmtResult[State]], s_0: State, inv_abnorm?, inv_norm?: PRED[StmtResult[State]]):$ $(while_invariant?(b_ex, body)(inv_abnorm?, inv_norm?) \wedge$ $inv_abnorm?(OK(s_0)) \wedge$ $(\forall (m: nat):$ $m < j + 1 \supset \neg while_termination_point?(b_ex, body, s_0)(m)))$ $\supset inv_abnorm?(iterate_while(j + 1, b_ex, body)(s_0)))$
--

Repeatedly Skolemizing and flattening,
Instantiating quantified variables,
Instantiating the top quantifier in -2 with the terms: (s0!1),
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
we get 2 subgoals:

iterate_while_invariant.2.1:

$\{-1\} \quad j' \geq 0$ $\{-2\} \quad while_invariant?(b_ex', body')(inv_abnorm?', inv_norm?')$ $\{-3\} \quad inv_abnorm?(OK(s'_0))$ $\{-4\} \quad inv_abnorm?(iterate_while(j', b_ex', body')(s'_0))$ $\{-5\} \quad \forall (m: nat): m < 1 + j' \supset \neg while_termination_point?(b_ex', body', s'_0)(m)$ <hr/> $\{1\} \quad inv_abnorm?(iterate_while(1 + j', b_ex', body')(s'_0))$

Expanding the definition of `while_invariant?`,
Using lemma `iterate_while_right`,
Simplifying, rewriting, and recording with decision procedures,
Replacing using formula -1,
Instantiating the top quantifier in -6 with the terms: (j!1),
Expanding the definition of `while_termination_point?`,
Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
Instantiating the top quantifier in -3 with the terms: (state(iterate_while(j!1, b_ex!1, body!1)(s0!1))),

Applying eta axiom scheme to `iterate_while(j!1, b_ex!1, body!1)(s0!1)`,
 Expanding the definition of `##`,
 Expanding the definition of `lift`,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Expanding the definition of `skip`,
 Replacing using formula -1,
 which is trivially true.

This completes the proof of `iterate_while_invariant.2.1`.

`iterate_while_invariant.2.2`:

$\{-1\} \quad j' \geq 0$	$\{-2\} \quad \text{while_invariant?}(\text{b_ex}', \text{body}')(\text{inv_abnorm?}', \text{inv_norm?}')$
$\{-3\} \quad \text{inv_abnorm?}'(\text{OK}(s'_0))$	$\{-4\} \quad \forall (m: \text{nat}): m < 1 + j' \supset \neg \text{while_termination_point?}(\text{b_ex}', \text{body}', s'_0)(m)$
$\{1\} \quad \forall (m: \text{nat}): m < j' \supset \neg \text{while_termination_point?}(\text{b_ex}', \text{body}', s'_0)(m)$	$\{2\} \quad \text{inv_abnorm?}'(\text{iterate_while}(1 + j', \text{b_ex}', \text{body}') (s'_0))$

Repeatedly Skolemizing and flattening,
 Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `iterate_while_invariant.2.2`.
 Q.E.D.

C.240.6 While_Hoare.min_termination_point_no_less

Terse proof for `min_termination_point_no_less`.

`min_termination_point_no_less`:

$\{1\} \quad \forall (\text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]],$	$s_0: \text{State}, m: \text{nat}):$
$(\exists (n: \text{nat}): \text{while_termination_point?}(\text{b_ex}, \text{body}, s_0)(n)) \wedge$	$m < \min[\text{nat}] (\text{while_termination_point?}(\text{b_ex}, \text{body}, s_0))$
$\supset \neg \text{while_termination_point?}(\text{b_ex}, \text{body}, s_0)(m)$	

Repeatedly Skolemizing and flattening,
 Adding type constraints for `min[nat](while_termination_point?(b_ex!1, body!1, s0!1))`,
 Instantiating quantified variables,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of `min_termination_point_no_less`.
 Q.E.D.

C.240.7 While_Hoare.while_terminates

The \LaTeX code for this proof is broken.

C.240.8 While_Hoare.while

The \LaTeX code for this proof is broken.

C.241 Proofs for While_Rewrites (statement-rewrites.pvs)

C.241.1 While_Rewrites.while_to_while_no_cb

Terse proof for while_to_while_no_cb.

while_to_while_no_cb:

$$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ \text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \text{body}: [\text{State} \rightarrow \text{StmtRe-} \\ \text{sult}[\text{State}]], \\ \text{variant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ \text{while}[\text{State}, \text{Ord}](\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <) = \\ (\text{while_no_cb}(\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <) \text{ ## } \text{catch_break})$$

Expanding the definition of while_no_cb,
Expanding the definition of while,
Repeatedly Skolemizing and flattening,
Using lemma while_no_cb_cb_while[State, Ord],
This completes the proof of while_to_while_no_cb.
Q.E.D.

C.241.2 While_Rewrites.while_inv_rewrite_termination_result

Terse proof for while_inv_rewrite_termination_result.

while_inv_rewrite_termination_result:

$$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ S: \text{PRED}[\text{StmtResult}[\text{State}]], \text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\ \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{vari-} \\ \text{ant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ (P(s)(\text{skip}(s)) \wedge \\ R(s)(\text{skip}(s)) \wedge \\ \text{while_variant?}(\text{b_ex}, \text{body}, <)(\text{variant}(s), R(s)) \wedge \\ \text{while_invariant?}(\text{b_ex}, \text{body})(P(s), Q(s)) \wedge \\ (\forall (\text{res}: \text{StmtResult}[\text{State}]): R(s)(\text{res}) \supset S(\text{res}))) \\ \supset S(\text{while_no_cb}(\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <)(s))$$

Repeatedly Skolemizing and flattening,
Using lemma hoare_while[State, Ord],
Installing automatic rewrites from: skip while_no_cb
Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier instantiation, skolemization, if-lifting and equality replacement,
This completes the proof of while_inv_rewrite_termination_result.
Q.E.D.

C.241.3 While_Rewrites.while_inv_rewrite_data_ok

Terse proof for while_inv_rewrite_data_ok.

while_inv_rewrite_data_ok:

$$\begin{array}{l}
 \{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\
 \quad S: \text{PRED}[\text{StmtResult}[\text{State}]], b_ex: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\
 \quad \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{vari-} \\
 \text{ant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\
 \quad (P(s)(\text{skip}(s)) \wedge \\
 \quad R(s)(\text{skip}(s)) \wedge \\
 \quad \text{while_variant?}(b_ex, \text{body}, <)(\text{variant}(s), R(s)) \wedge \\
 \quad \text{while_invariant?}(b_ex, \text{body})(P(s), Q(s)) \wedge \\
 \quad \text{OK?}(\text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <)(s)) \wedge \\
 \quad (\forall (\text{res}: \text{StmtResult}[\text{State}]): Q(s)(\text{res}) \supset S(\text{res}))) \\
 \quad \supset S(\text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <)(s))
 \end{array}$$

Installing automatic rewrites from: skip while_no_cb

Repeatedly Skolemizing and flattening,

Using lemma hoare_while[State, Ord],

Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier instantiation, skolemization, if-lifting and equality replacement,

This completes the proof of while_inv_rewrite_data_ok.

Q.E.D.

C.241.4 While_Rewrites.while_inv_rewrite_data_break

Terse proof for while_inv_rewrite_data_break.

while_inv_rewrite_data_break:

$$\begin{array}{l}
 \{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\
 \quad S: \text{PRED}[\text{StmtResult}[\text{State}]], b_ex: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\
 \quad \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{vari-} \\
 \text{ant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\
 \quad (P(s)(\text{skip}(s)) \wedge \\
 \quad R(s)(\text{skip}(s)) \wedge \\
 \quad \text{while_variant?}(b_ex, \text{body}, <)(\text{variant}(s), R(s)) \wedge \\
 \quad \text{while_invariant?}(b_ex, \text{body})(P(s), Q(s)) \wedge \\
 \quad \text{Break?}(\text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <)(s)) \wedge \\
 \quad (\forall (\text{res}: \text{StmtResult}[\text{State}]): \\
 \quad \quad (P(s)(\text{res}) \vee Q(s)(\text{res})) \wedge \text{Break?}(\text{res}) \supset S(\text{res}))) \\
 \quad \supset S(\text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <)(s))
 \end{array}$$

Installing automatic rewrites from: skip while_no_cb

Repeatedly Skolemizing and flattening,

Using lemma hoare_while[State, Ord],

Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier instantiation, skolemization, if-lifting and equality replacement,

This completes the proof of while_inv_rewrite_data_break.

Q.E.D.

C.241.5 While_Rewrites.while_inv_rewrite_data_return

Terse proof for while_inv_rewrite_data_return.

while_inv_rewrite_data_return:

$$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ S: \text{PRED}[\text{StmtResult}[\text{State}]], \text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\ \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{vari-} \\ \text{ant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ (P(s)(\text{skip}(s)) \wedge \\ R(s)(\text{skip}(s)) \wedge \\ \text{while_variant?}(\text{b_ex}, \text{body}, <)(\text{variant}(s), R(s)) \wedge \\ \text{while_invariant?}(\text{b_ex}, \text{body})(P(s), Q(s)) \wedge \\ \text{Return?}(\text{while_no_cb}(\text{b_ex}, \text{body}))(P, Q, R, \text{variant}, <)(s) \wedge \\ (\forall (\text{res}: \text{StmtResult}[\text{State}]): \\ (P(s)(\text{res}) \vee Q(s)(\text{res})) \wedge \text{Return?}(\text{res}) \supset S(\text{res}))) \\ \supset S(\text{while_no_cb}(\text{b_ex}, \text{body}))(P, Q, R, \text{variant}, <)(s))$$

Installing automatic rewrites from: skip while_no_cb

Repeatedly Skolemizing and flattening,

Using lemma hoare_while[State, Ord],

Repeatedly simplifying with decision procedures, rewriting, propositional reasoning, quantifier instantiation, skolemization, if-lifting and equality replacement,

This completes the proof of while_inv_rewrite_data_return.

Q.E.D.

C.241.6

While_Rewrites.stmt_while_inv_rewrite_termination_result_TCC1

Terse proof for stmt_while_inv_rewrite_termination_result_TCC1.

stmt_while_inv_rewrite_termination_result_TCC1:

$$\{1\} \quad \forall (s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]]): \\ \text{OK?}(\text{stmt}(s)) \supset \\ \text{OK?}[\text{State}](\text{stmt}(s)) \vee \\ \text{Break?}[\text{State}](\text{stmt}(s)) \vee \\ \text{Continue?}[\text{State}](\text{stmt}(s)) \vee \\ \text{Return?}[\text{State}](\text{stmt}(s)) \vee \\ \text{Switch?}[\text{State}](\text{stmt}(s)) \vee \\ \text{Default?}[\text{State}](\text{stmt}(s)) \vee \text{Exception?}[\text{State}](\text{stmt}(s))$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of stmt_while_inv_rewrite_termination_result_TCC1.

Q.E.D.

C.241.7 While_Rewrites.stmt_while_inv_rewrite_termination_result

Terse proof for stmt_while_inv_rewrite_termination_result.

stmt_while_inv_rewrite_termination_result:

$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ S: \text{PRED}[\text{StmtResult}[\text{State}]], b_ex: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\ \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], \\ \text{variant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ (\text{OK}?(s) \wedge \\ P(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ R(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ \text{while_variant?}(b_ex, \text{body}, <) \\ (\text{variant}(\text{state}(\text{stmt}(s))), R(\text{state}(\text{stmt}(s)))) \\ \wedge \\ \text{while_invariant?}(b_ex, \text{body})(P(\text{state}(\text{stmt}(s))), Q(\text{state}(\text{stmt}(s)))) \wedge \\ (\forall (\text{res}: \text{StmtResult}[\text{State}]): R(\text{state}(\text{stmt}(s)))(\text{res}) \supset S(\text{res}))) \\ \supset S((\text{stmt} \ \#\# \ \text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <))(s))$
--

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: ## skip lift!
 Using lemma while_inv_rewrite_termination_result,
 Applying eta axiom scheme to stmt!1(s!1),
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of stmt_while_inv_rewrite_termination_result.
 Q.E.D.

C.241.8 While_Rewrites.stmt_while_inv_rewrite_data_ok

Terse proof for stmt_while_inv_rewrite_data_ok.

stmt_while_inv_rewrite_data_ok:

$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ S: \text{PRED}[\text{StmtResult}[\text{State}]], b_ex: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\ \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], \\ \text{variant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ (\text{OK}?(s) \wedge \\ P(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ R(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ \text{while_variant?}(b_ex, \text{body}, <) \\ (\text{variant}(\text{state}(\text{stmt}(s))), R(\text{state}(\text{stmt}(s)))) \\ \wedge \\ \text{while_invariant?}(b_ex, \text{body})(P(\text{state}(\text{stmt}(s))), Q(\text{state}(\text{stmt}(s)))) \wedge \\ \text{OK}?(s) \wedge \\ (\forall (\text{res}: \text{StmtResult}[\text{State}]): Q(\text{state}(\text{stmt}(s)))(\text{res}) \supset S(\text{res}))) \\ \supset S((\text{stmt} \ \#\# \ \text{while_no_cb}(b_ex, \text{body})(P, Q, R, \text{variant}, <))(s))$
--

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: ## skip lift!
 Applying eta axiom scheme to stmt!1(s!1),
 Using lemma while_inv_rewrite_data_ok,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of stmt_while_inv_rewrite_data_ok.

Q.E.D.

C.241.9 While_Rewrites.stmt_while_inv_rewrite_data_break

Terse proof for `stmt_while_inv_rewrite_data_break`.

`stmt_while_inv_rewrite_data_break`:

$$\begin{array}{l}
 \{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\

 \end{array}$$

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: `## skip lift!`

Applying eta axiom scheme to `stmt!1(s!1)`,

Using lemma `while_inv_rewrite_data_break`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

This completes the proof of `stmt_while_inv_rewrite_data_break`.

Q.E.D.

C.241.10 While_Rewrites.stmt_while_inv_rewrite_data_return

Terse proof for `stmt_while_inv_rewrite_data_return`.

stmt_while_inv_rewrite_data_return:

$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ S: \text{PRED}[\text{StmtResult}[\text{State}]], \text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \\ \text{body}: [\text{State} \rightarrow \text{StmtResult}[\text{State}]], s: \text{State}, \text{stmt}: [\text{State} \rightarrow \text{StmtRe-} \\ \text{sult}[\text{State}]], \\ \text{variant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ (\text{OK}?(\text{stmt}(s)) \wedge \\ P(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ R(\text{state}(\text{stmt}(s)))(\text{stmt}(s)) \wedge \\ \text{while_variant}?(\text{b_ex}, \text{body}, <) \\ (\text{variant}(\text{state}(\text{stmt}(s))), R(\text{state}(\text{stmt}(s)))) \\ \wedge \\ \text{while_invariant}?(\text{b_ex}, \text{body})(P(\text{state}(\text{stmt}(s))), Q(\text{state}(\text{stmt}(s)))) \wedge \\ \text{Return}?((\text{stmt} \#\# \text{while_no_cb}(\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <))(s)) \wedge \\ (\forall (\text{res}: \text{StmtResult}[\text{State}]): \\ (P(\text{state}(\text{stmt}(s)))(\text{res}) \vee Q(\text{state}(\text{stmt}(s)))(\text{res})) \wedge \\ \text{Return}?(\text{res}) \\ \supset S(\text{res}))) \\ \supset S((\text{stmt} \#\# \text{while_no_cb}(\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <))(s))$
--

Repeatedly Skolemizing and flattening,
 Installing automatic rewrites from: ## skip lift!
 Applying eta axiom scheme to stmt!1(s!1),
 Using lemma while_inv_rewrite_data_return,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 This completes the proof of stmt_while_inv_rewrite_data_return.
 Q.E.D.

C.241.11 While_Rewrites.pm_q_prop_while

Terse proof for pm_q_prop_while.

pm_q_prop_while:

$\{1\} \quad \forall (<: \text{PRED}[[\text{Ord}, \text{Ord}]], P, Q, R: [\text{State} \rightarrow \text{PRED}[\text{StmtResult}[\text{State}]]], \\ \text{b_ex}: [\text{State} \rightarrow \text{ExprResult}[\text{State}, \text{bool}]], \text{body}: [\text{State} \rightarrow \text{StmtRe-} \\ \text{sult}[\text{State}]], \\ \text{pm}: \text{Plain_Memory}[\text{State}], s: \text{State}, \text{variant}: [\text{State} \rightarrow [\text{State} \rightarrow \text{Ord}]]): \\ \text{LET } \text{pm_q_prop_inv} = \\ \quad \lambda (s_1: \text{State}): \lambda (\text{res}: \text{StmtResult}[\text{State}]): \text{pm_q_prop}(\text{pm})(\text{catch_break}(\text{res})) \\ \text{IN} \\ \text{pm}'\text{states}(s) \wedge \\ R(s)(\text{skip}(s)) \wedge \\ \text{while_variant}?(\text{b_ex}, \text{body}, <)(\text{variant}(s), R(s)) \wedge \\ \text{while_invariant}?(\text{b_ex}, \text{body})(\text{pm_q_prop_inv}(s), \text{pm_q_prop_inv}(s)) \\ \supset \text{pm_q_prop}(\text{pm})(\text{while}(\text{b_ex}, \text{body})(P, Q, R, \text{variant}, <))(s)$

Repeatedly Skolemizing and flattening,
 Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,
 Using lemma hoare_while[State, Ord],
 Rewriting using while_to_while_no_cb, matching in *,
 Expanding the definition of ##,

C Proof scripts

Expanding the definition of `while_no_cb`,

Expanding the definition of `skip`,

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of `pm_q_prop`,

Expanding the definition of `catch_break`,

which is trivially true.

This completes the proof of `pm_q_prop_while`.

Q.E.D.

C.241.12 While_Rewrites.pm_q_prop_stmt_while_TCC1

Terse proof for `pm_q_prop_stmt_while_TCC1`.

`pm_q_prop_stmt_while_TCC1`:

$$\begin{array}{l} \{1\} \quad \forall (pm: \text{Plain_Memory}[State], s: State, stmt: [State \rightarrow \text{StmtResult}[State]], \\ \quad pm_q_prop_inv: [State \rightarrow [StmtResult[State] \rightarrow \text{bool}]]) : \\ (pm_q_prop(pm)(stmt(s)) \wedge \\ \quad pm_q_prop_inv = \\ \quad (\lambda (s_1: State): \\ \quad \quad \lambda (res: \text{StmtResult}[State]): pm_q_prop(pm)(catch_break(res)))) \\ \supset \\ \text{OK?}[State](stmt(s)) \vee \\ \text{Break?}[State](stmt(s)) \vee \\ \text{Continue?}[State](stmt(s)) \vee \\ \text{Return?}[State](stmt(s)) \vee \\ \text{Switch?}[State](stmt(s)) \vee \\ \text{Default?}[State](stmt(s)) \vee \text{Exception?}[State](stmt(s)) \end{array}$$

Trying repeated skolemization, instantiation, and if-lifting,

This completes the proof of `pm_q_prop_stmt_while_TCC1`.

Q.E.D.

C.241.13 While_Rewrites.pm_q_prop_stmt_while

Terse proof for `pm_q_prop_stmt_while`.

pm_q_prop_stmt_while:

```

{1}  ∀ (<: PRED[[Ord, Ord]], P, Q, R: [State → PRED[StmtResult[State]]],
      b_ex: [State → ExprResult[State, bool]], body: [State → StmtRe-
      sult[State]],
      pm: Plain_Memory[State], s: State, stmt: [State → StmtResult[State]],
      variant: [State → [State → Ord]]):
  LET pm_q_prop_inv =
      λ (s_1: State): λ (res: StmtResult[State]): pm_q_prop(pm)(catch_break(res))
  IN
  pm_q_prop(pm)(stmt(s)) ∧
  R(state(stmt(s)))(stmt(s)) ∧
  while_variant?(b_ex, body, <)(variant(state(stmt(s))), R(state(stmt(s))))
  ∧
  while_invariant?(b_ex, body)
  (pm_q_prop_inv(state(stmt(s))),
   pm_q_prop_inv(state(stmt(s))))
  ⊃ pm_q_prop(pm)((stmt ## while(b_ex, body))(P, Q, R, variant, <))(s)

```

Repeatedly Skolemizing and flattening,

Installing automatic rewrites from: ## skip lift!

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Using lemma pm_q_prop_while,

Applying eta axiom scheme to stmt!1(s!1),

Repeatedly simplifying with BDDs, decision procedures, rewriting, and if-lifting,

Expanding the definition of pm_q_prop,

which is trivially true.

This completes the proof of pm_q_prop_stmt_while.

Q.E.D.
